Data Paradise
(**in the style of "Gangsta's Paradise" by Coolio)

Hook:
Been spendin most our lives livin in a data paradise
Been spendin most my days learnin bout mean, median, mode and range

Verse 1:
As I walk through the door of my mathematics class
I take a look at the board, and I see a data graph
With all these figures and numbers to crunch that
Even this guy would think it's a bit too much
But I ain't never seen some data and not observe it
Quantitative measures of the center and spread
I'm talkin bout mean and median, and even mode and
Or even bout the range that this data shows
I really hate to trip but I gotta see
What the average is, we call it the mean
Add up all the numbers then divide it by how many
That's the waaay that we calculate the mean lil homie

Hook

Verse 2:
Let's find the median, kid, just think of this pic
So first I order all the data, yeah from small to big
Then I gotta mark em out, work my way in
The one that's in the very center is the median
Next I gotta find the mode, but it's so easy to try
It's the number that is in the data set the most times
Now the last thing to do is find the range of this data
See you can.t stop my brain just like Hannah Montana, fool
Take the smallest number and subtract if from the greatest
That's the range, super easy, what can I say?
I found the mean, median and the mode and range, so
I'm ballin like the legend Big O (Oscar Robertson)

Tell me why are we so blind to see
That Catwoman is this same laaaaady? (pic of Catwoman and Michelle Pfeiffer from Dangerous Minds)
