ANONYMIZED MANUSCRIPT FOR DOUBLE-BLIND PEER REVIEW

[Insert the article title in English: concise, informative, maximum 14 words]

ABSTRACT

[Write an academic abstract of 200–300 words in a single paragraph. State the research context, purpose, design and methods, participants or data sources, main findings supported by evidence, and principal conclusion. Avoid citations and unexplained abbreviations.]

Keywords: *[3–5 keywords in alphabetical order; separate with semicolons]*

[Blind-review instruction: Do not include author names, affiliation, ORCID, contact details, acknowledgments, or identifying funding/grant information in this file. Enter complete author information in the OJS metadata fields and send identifying statements separately when requested.]

INTRODUCTION

The introduction should explain the background, rationale, and urgency of the research, supported by relevant theories and previous findings (state of the art). Synthesize earlier studies, identify the research gap, and show what distinguishes the present study. Describe the problem, research objectives or questions, significance, and novelty in a coherent narrative rather than as separate bullet points. Include operational definitions when needed. As a guide, this section may occupy approximately 15–20% of the article.

[Replace these instructions with your introduction. Use APA 7 author–date citations; supply page numbers for direct quotations, rather than requiring page numbers for all paraphrases.]

METHOD

The Method section should specify the research type and design, time and setting, participants or sources of data, sampling or selection strategy, research procedures, instruments, data collection, and methods of analysis. Describe each stage clearly enough for readers to evaluate the study and, when appropriate, replicate it. Explain instrument quality (e.g., validity and reliability or qualitative trustworthiness), ethical procedures, and how the analysis addresses the research questions. As a flexible guide, this section may comprise approximately 10–15% of the article.

Research Design and Setting

[State the research approach and design, setting, period, and rationale. For review articles, specify the databases, search terms, inclusion criteria, screening, and synthesis procedure instead of participant sampling.]

Participants, Instruments, and Procedures

[Describe participant or document selection, recruitment or sampling, instruments or research materials, validation procedures, chronological data collection, and any ethical approval or consent where applicable.]

Data Analysis

[Explain statistical analyses or qualitative coding/synthesis, treatment of missing or conflicting data when relevant, and procedures used to ensure credible interpretations.]

RESULTS

Present the findings in a clear sequence that answers the research questions or hypotheses. Support all claims with sufficient evidence and use tables or figures where they add value. Number tables and figures consecutively, mention each in the text before it appears, and avoid repeating all numerical values in the narrative. Place table titles above their tables and figure captions below figures. Use simple tables without vertical rules, as in the original J-MER template.

Table 1. Name of Table

Variable or theme	Group A	Group B
[Variable / theme 1]	[Value]	[Value]
[Variable / theme 2]	[Value]	[Value]
[Variable / theme 3]	[Value]	[Value]

Note. [Explain abbreviations, statistics, and source information.]

[Insert a clear, original research figure here]

Figure 1. [Concise descriptive caption.]

DISCUSSION

Interpret the main results in relation to the research problem, relevant theory, and previous studies. Explain why the observed findings may have occurred; compare similarities and differences with earlier research; and clarify theoretical or practical implications for mathematics education. Distinguish interpretation from the data themselves, acknowledge limitations, and avoid claims beyond the evidence. Together, Results and Discussion typically form the largest portion of the manuscript; the proportions suggested in the previous template are indicative rather than mandatory.

CONCLUSION

Write the conclusion in concise, connected paragraphs rather than bullet points. Answer the stated research objectives or questions, highlight the study's principal contribution, and identify implications and realistic directions for further research. Do not simply repeat the abstract, results, or discussion, and do not introduce new evidence.

DECLARATIONS

Author Contributions: **[Describe the contributions of each author, such as conceptualization, methodology, analysis, and writing, if required by journal policy.]**

Funding: **[Name the funder and grant number, or state that the study received no external funding.]**

Ethics Approval and Consent: **[Provide applicable approval or consent information; use "not applicable" only when justified.]**

Data Availability: **[Identify accessible data or explain restrictions related to confidentiality or participant consent.]**

Conflict of Interest: **[Disclose actual or potential competing interests, or state that none exist.]**

Use of Generative AI: **[Disclose substantive generative AI assistance where relevant, subject to journal policy, and indicate author verification.]**

REFERENCES

Prepare the references alphabetically using APA 7th Edition and a reference manager (e.g., Mendeley, Zotero, or EndNote). Every in-text citation must appear in the reference list and vice versa. Under J-MER's 2026 guidelines, include at least 20 relevant references, with at least 80% from journal articles, preferably recent publications. Retain verified DOI links in https://doi.org/ format when available. Check the accuracy of each reference and its DOI before submission.

[Author], [A. A.], & [Author], [B. B.]. ([Year]). [Title of article in sentence case]. [Journal Title], [volume]([issue]), [pages or article number]. https://doi.org/[verified DOI]

[Author], [A. A.]. ([Year]). [Book title in sentence case]. [Publisher].

TEMPLATE INSTRUCTIONS — DELETE BEFORE SUBMISSION: *Delete gray instructions and replace placeholders with manuscript content. Remove identifying author text and hidden document metadata from the reviewer copy. Provide author identities through OJS.*
