ABSTRACT (11PT)

The abstract must be written in English and consist of 150–250 words, presented in a single paragraph following an IMRAD-oriented structure (Introduction, Methods, Results, and Discussion). It should provide a concise, clear, and self-contained summary of the study without references, tables, figures, or undefined abbreviations. The abstract should begin by introducing the research topic, relevant background, significance, and research problem, followed by the research gap and specific research objectives. Authors should clearly highlight the novelty and originality of the study by explaining its distinctive contribution to existing knowledge. The methods section should briefly describe the research design, data sources, population and sample or unit of analysis, research setting or period, and analytical techniques employed. The results section should present the principal findings, including relevant empirical evidence or statistical results where applicable. Finally, the abstract should conclude with the main conclusions, theoretical contributions, and relevant practical implications for policy, management, economics, science, education, or society. Authors are encouraged to ensure that the abstract accurately reflects the content and key contributions of the manuscript..

This is an open access article under the CC–BY-SA license This is an open access article under the CC–BY-SA license.

A. Introduction (bold, 12 pt)

The Introduction should clearly establish the research background, significance, and rationale by explaining why the study is important, what is currently known, and what remains insufficiently explored in the relevant field. Authors should provide an appropriate theoretical or conceptual foundation and critically discuss the state of the art based on relevant, recent, and credible literature. The Introduction must explicitly identify the research gap and demonstrate the novelty or original contribution of the study in addressing the identified gap. Authors should explain how the study differs from, extends, examines, integrates, or challenges previous research and how it contributes to the advancement of knowledge in economics, science, education, or related interdisciplinary fields. Where applicable, authors should formulate clear research questions, hypotheses, or propositions. The Introduction should conclude with specific research objectives that are logically aligned with the research problems, identified gaps, and intended scholarly contributions. Authors are encouraged to use recent scholarly references while retaining relevant seminal works to strengthen the theoretical foundation. (11 pt)

B. Literature Review (bold, 12 pt)

The Literature Review should provide a comprehensive and critical analysis of relevant scholarly publications related to the research topic, with particular emphasis on developments and trends over the past ten years. Authors should identify and discuss significant theoretical perspectives, key findings, and previous studies that have contributed to the development of the research area. The review should not merely summarize existing publications but also critically examine their contributions, limitations, and differing perspectives to establish a clear understanding of the current state of knowledge. Authors are encouraged to prioritize recent and credible scholarly sources while incorporating seminal works when necessary to strengthen the theoretical foundation. The Literature Review should identify relevant research gaps, establish the theoretical or conceptual basis of the study, and demonstrate how the present research contributes to the advancement of knowledge in economics, science, education, and related interdisciplinary fields. For emerging research areas with limited publications, authors may discuss the available body of literature comprehensively. (11 pt)

C. Research Method (bold, 12 pt)

It should be mention time and place of research in first part. All materials and methods that used such chemical for analysis, treatment and experimental design must be stated clearly and briefly. State the objectives of the work and provide an adequate background, avoiding a detailed literature survey or a summary of the results. A Theory section should extend, not repeat, the background to the article already dealt with in the Introduction and lays the foundation for further work. a Calculation section represents a practical development from a theoretical basis. Materials and methods must be written using 400 until 600 words. (11 pt)

D. Results and Discussion (bold, 12 pt)

Results

Contains the results of empirical research or theoretical studies that are written in a systematic, critical analysis, and informative. The use of tables, figures etc. is only as a support to clarify the discussion and is limited to supporters who are truly substantial, for example tables of statistical test results, images of test results of models etc. Discussion of the results is argumentative concerning the relevance of the results, theories, previous research and empirical facts found, and shows the novelty of the findings. (11 pt)

Figures, graphs, and diagrams should be inserted in the appropriate position within the manuscript. All figures must be clear, readable, and have a minimum resolution of 300 dpi. Each figure should be numbered consecutively (Figure 1, Figure 2, etc.) and provided with a descriptive caption below the image. Authors must include the source when using figures adapted from or reproduced from other publications. (11 pt)

Discussion

Discussion is the most important part of the entire content of a scientific article. The objectives of the discussion are: to answer the research problem, interpret the findings, integrate the findings from the research into the existing set of knowledge, and construct a new theory or modify an existing theory.

E. Conclusion

Contains conclusions with extensive deprivation of the discussion of research results that are written briefly and clearly, showing clarity of the contribution of findings, sparking new theories and the possibility of developing research that can be done in the future. Theoretical and practical implications written in flowing paragraphs.

Acknowledgment and Funding

Acknowledgements including people, grants, funds, projects, etc. should be kept brief and placed after conclusion section. Names of contributing people should be written clearly and fully.

Author Contribution Statement

An author contribution statement is a specification of the contributions (responsibilities) of the

Copyright © 2027, International Journal of Econimics, Science, and Education

different authors in the emergence of a manuscript. The statement clarifies who and to which extent someone was responsible for, for instance, the formulation of hypotheses, the cogitation of the research, the collection of data, the data analysis, the interpretation of data and writing the article.
Example:
Syamsul Arifin: Conceptualization, Methodology, Formal Analysis, Writing – Original Draft. **Mifatahul Jannah**: Data Curation, Software, Validation, Visualization. **Lailatul Rohmah** : Supervision, Writing – Review & Editing. All authors approved the final manuscript and agreed to be accountable for their contributions.

Declaration of AI Use

Articles to be published in the journal must include a statement regarding the use of artificial intelligence applications. Briefly explain how you use AI in your article. If generative AI technologies were used in the article, the specific generative AI tool (name and version) and its purpose should be specified. The productive AI tool/output should be summarized, including where it is located in the article, how it is used, and what changes or adaptations have been made. If assistance from artificial intelligence was not received, this is also requested to be stated.
Example:
The authors used generative AI tools [--mention the name--] for [--choose: language enhancement (grammar, phrasing, and clarity), summarization of preliminary notes, and assistance with coding and data analysis scripts--]. No content was generated by AI without critical review, modification, and final approval by the authors. The authors take full responsibility for the content and accuracy of the manuscript.

If no AI was used:
The authors declare that no generative artificial intelligence (AI) tools were used in the writing, editing, analysis, or any part of the preparation of this manuscript. All content was conceived, written, and finalized solely by the authors without the assistance of AI technologies.

Disclosure Statement

No potential conflict of interest was reported by the author(s).

Ethical Approval (if applicable)

For studies involving human participants or other research activities requiring ethical clearance, authors may provide a statement describing the ethical approval obtained, including the name of the approving ethics committee or institution and the approval number, if available. Information regarding informed consent may also be included, where applicable. If ethical approval is not applicable, this section may be omitted. (11 pt)

References

All references cited in the manuscript should be listed alphabetically according to the first author's surname and formatted in accordance with the APA 7th Edition (American Psychological Association) referencing style. Authors are encouraged to prioritize relevant and recent scholarly publications published within the last ten years, while seminal works may be included when necessary to support the theoretical foundation of the study. The manuscript should include a minimum of 20 references, with at least five articles published in reputable international journals. In addition, authors are required to cite at least three relevant articles previously published in the *International Journal of Economics, Science, and Education (IJESE) within the most recent three-year period. These articles must be appropriately cited in the manuscript and included in the reference list. Authors are encouraged to use reference management software such as Mendeley, EndNote, or Zotero to organize references and ensure consistency between in-text citations and the reference list. About the Contributor(s).

Syamsul Arifin is a lecturer at Sekolah Tinggi Ilmu Ekonomi Pemuda, Indonesia. His research interests include microeconomics, macroeconomics, and welfare economics, with a particular focus on economic welfare and community development. He has published several scholarly articles in various academic journals. He can be contacted via email at
