ABSTRACT

Background: ... Objective: ... Methods: ... Results: ... Conclusion: ... (150–250 words)

The abstract comprises the background, objectives, methods, results, conclusions, and implications. It is written in a single English paragraph using the Cambria font size 10 with one line spacing. The word count in the abstract should not exceed 150-250 words. The abstract should exclude references, footnotes, bibliographic citations, abbreviations/acronyms, mathematical formulas, or statistical figures. No italics are used in the abstract.

Keywords: 3–6 keywords alphabetical order avoid repeating title

INTRODUCTION

The introduction encompasses 1) the basic concept of the research topic or variables, 2) the problem, 3) alternative solutions, and the state of the art (previous publications, emphasizing differences: whether it's in the methodological approach, data collection tools, research approach, data analysis techniques, or research subjects, etc. This statement will be the novelty of this paper. Clearly demonstrate this explicitly. 4) objectives, and 5) the significance, contribution, and importance of conducting this research. Use Cambria 11 font, one spacing, justified alignment.

Here is a good example of citation in the manuscript: "Family plays a crucial role in the educational development of children (Horowitz, 1985; Jencik, 2011). Education within the family environment is the first form of informal education a child receives (Hadiz & Robison, 2017). Therefore, a child's attitudes and behaviors can be shaped through education in the family environment. The majority of a child's attitudes and behaviors are absorbed by their parents and other family members (Soejatno, 1974). Thus, in terms of time, parents' role in educating children is crucial (Estrelita, 2022; Gergen, 2018; Ishiyama, 2013). In connection with this, factors such as parental involvement, such as attention in learning activities, will encourage a child's learning motivation."

METHOD

The method should describe components such as research design, time and place of research; for quantitative research, include population, sample, and sampling techniques; for qualitative research, provide data sources, respondents, key informants; data collection techniques (observation, documentation study, interviews, tests, questionnaires); research procedures or

how the research is conducted/stages, research instruments, and data analysis techniques. The Method section is written in paragraph form. Avoid quoting definitions and concepts of research methods. Only describe how the research stages were conducted in this study. Use the Cambria 11 font, one spacing.

RESULTS

Present findings clearly. Tables and figures should follow journal style.

Research Results (permitted in subheadings) present a substantial amount of original empirical data obtained directly from questionnaires, surveys, documents, interviews, observations, and other relevant data-collection methods. This section focuses solely on reporting research findings in a clear, systematic, and objective manner, without interpretation, theoretical explanation, or comparison with previous studies.

The Findings (Results) section should not contain any reference citations, conceptual frameworks, or analytical discussions. All interpretations, theoretical contextualization, and comparisons with prior research must be presented separately in the Discussion section.

The Results are written in Cambria, size 11, single-spaced, and justified. Subheadings may be used to organize findings based on research variables or analytical categories, ensuring logical flow and clarity.

DISCUSSION

Interpret findings and compare them with previous studies.

Subtitle

In the Discussion section, the author provides a detailed analysis of the research findings, confirmed with theories and/or previous research. This section presents interpreted and analyzed data using specific techniques and processes with specific theories (also from the researcher's ideas). The author analyzes by indicating strengths, weaknesses, alignment, or contradictions with theories or previous research. The research results section is the answer to the gap and problems examined based on the research objectives. Use the Cambria 11 font, one spacing.

CONCLUSION

Highlight contributions, policy implications, limitations, and future research.

The conclusion is not a summary of the discussion. The conclusion is written briefly and clearly based on the research results, followed by an explanation of its logical consequences in developing science, theoretical, and practical education. The conclusion must be, "What does this mean for us going forward?" The question "What does this mean for us going forward?" in the context of writing a scientific article invites the author to reflect on the implications and relevance of the research findings for the future. In the conclusion section of a scientific article, the author is expected to provide a summary of the main findings and present the interpretation or meaning of the research results. Additionally, the author is also asked to consider how these findings can contribute, provide new insights, or suggest new approaches for the development of knowledge in the relevant field. So, when asked, "What does this mean for us going forward?" you should explain how your research findings impact or are relevant to future policies, practices, or research. Do your findings provide new insights that can be adopted by practitioners? Do your findings have implications for policy development? Are there any areas of further research that may emerge from your research findings? Examples of answers in the conclusion may involve: [1] Practical Implications: By answering the question: How can research findings be applied in a specific practice or industry context? Are there practical recommendations that can be drawn from these findings?[2] Policy Implications: by answering the question How can research findings impact policy formulation in the relevant field? Does

this finding provide guidance for specific policy changes?[3] Opportunities for Further Research: by answering the question: Do research findings open up opportunities for further research or in-depth research on specific aspects? Are there research questions arising from these findings that need to be answered?; [4] Contribution to Knowledge: by answering the question: How can these findings contribute to literature and knowledge in a specific field? Does this finding contradict or reinforce previous findings? By detailing these implications, readers and stakeholders can understand the importance of your research results and how these results can be applied or used in the future. The conclusion is not indented/bullet, but in paragraph form. Use the Cambria 11 font, one spacing.

EXAMPLE TABLE

Table 1. Example of journal table style. 300 dpi

Variable	n	%
Male	120	54.2
Female	101	45.8
Total	221	100.0

Disclose the use of AI tools in accordance with COPE, ICMJE, and journal policy.

REFERENCES

The writing must be sourced from the latest references (up to the last 10 years), relevant, and authoritative. Write the number of references cited and truly written/cited in the manuscript from primary sources. (70% taken from Scopus-indexed scientific journals, 30% from other supporting sources). Citations in the text should follow the APA (American Psychological Association) 7th Edition style using a reference manager: Mendeley. Requirements for components that must be present in a reference: author's name; year of publication, title of the manuscript, publisher's name; Digital address of the manuscript (DOI or PDF link). Use the Cambria font size 11, with one spacing.

Formatting Requirements

Authors must prepare their manuscripts according to the following formatting requirements before submission.

Item	Requirement
Article Type	Original Research Article
Manuscript Length	5000-10.000 words
Paper Size	A4 (210 × 297 mm)
Page Orientation	Portrait
Margins	Top: 2.5 cm • Bottom: 2.5 cm • Left: 2.5 cm • Right: 2.5 cm
Layout	Single-column format
Font	Cambria
Body Text Size	11 pt
Title	16 pt, Bold, Title Case, Centred
Author Name	11 pt, Bold
Affiliation	10 pt
Corresponding Author	Email and ORCID (if available)
Line Spacing	Single (1.0)
Paragraph Alignment	Justified
First Line Indent	0 cm
Paragraph Spacing	6 pt after paragraph
Page Number	Bottom Canter
Language	English
Abstract	Maximum 250 words
Keywords	3–6 keywords separated by semicolons
Headings	Numbered headings are not needed; use the styles provided in the template
Tables	Sequentially numbered, editable, with titles placed above the table and source information below (if applicable)
Figures	Sequentially numbered, minimum 300 dpi resolution, caption placed below the figure
Equations	Editable and sequentially numbered
Units	International System of Units (SI)
References	APA Style (7th Edition)
Reference Manager	Mendeley, Zotero, or EndNote is recommended
Reference Quality	Minimum 30 references, with at least 80% from scholarly journals published within the last 10 years
DOI	Include DOI for all references whenever available
Similarity Index	Maximum 20% (excluding bibliography, quotations, and templates)
AI Disclosure	Required when generative AI tools are used during manuscript preparation

Tables and Figures

Tables

- Use editable table format (do not insert as images).

- Number consecutively (Table 1, Table 2, etc.).
- Place the table title **above** the table.
- Cite the data source **below** the table when applicable.

Figures

- Use high-resolution images (minimum 300 dpi).
- Preferred formats: PNG, SVG, EPS, or TIFF.
- Number consecutively (Figure 1, Figure 2, etc.).
- Place the figure caption **below** the figure.
- Ensure all text within figures is still readable after publication.
