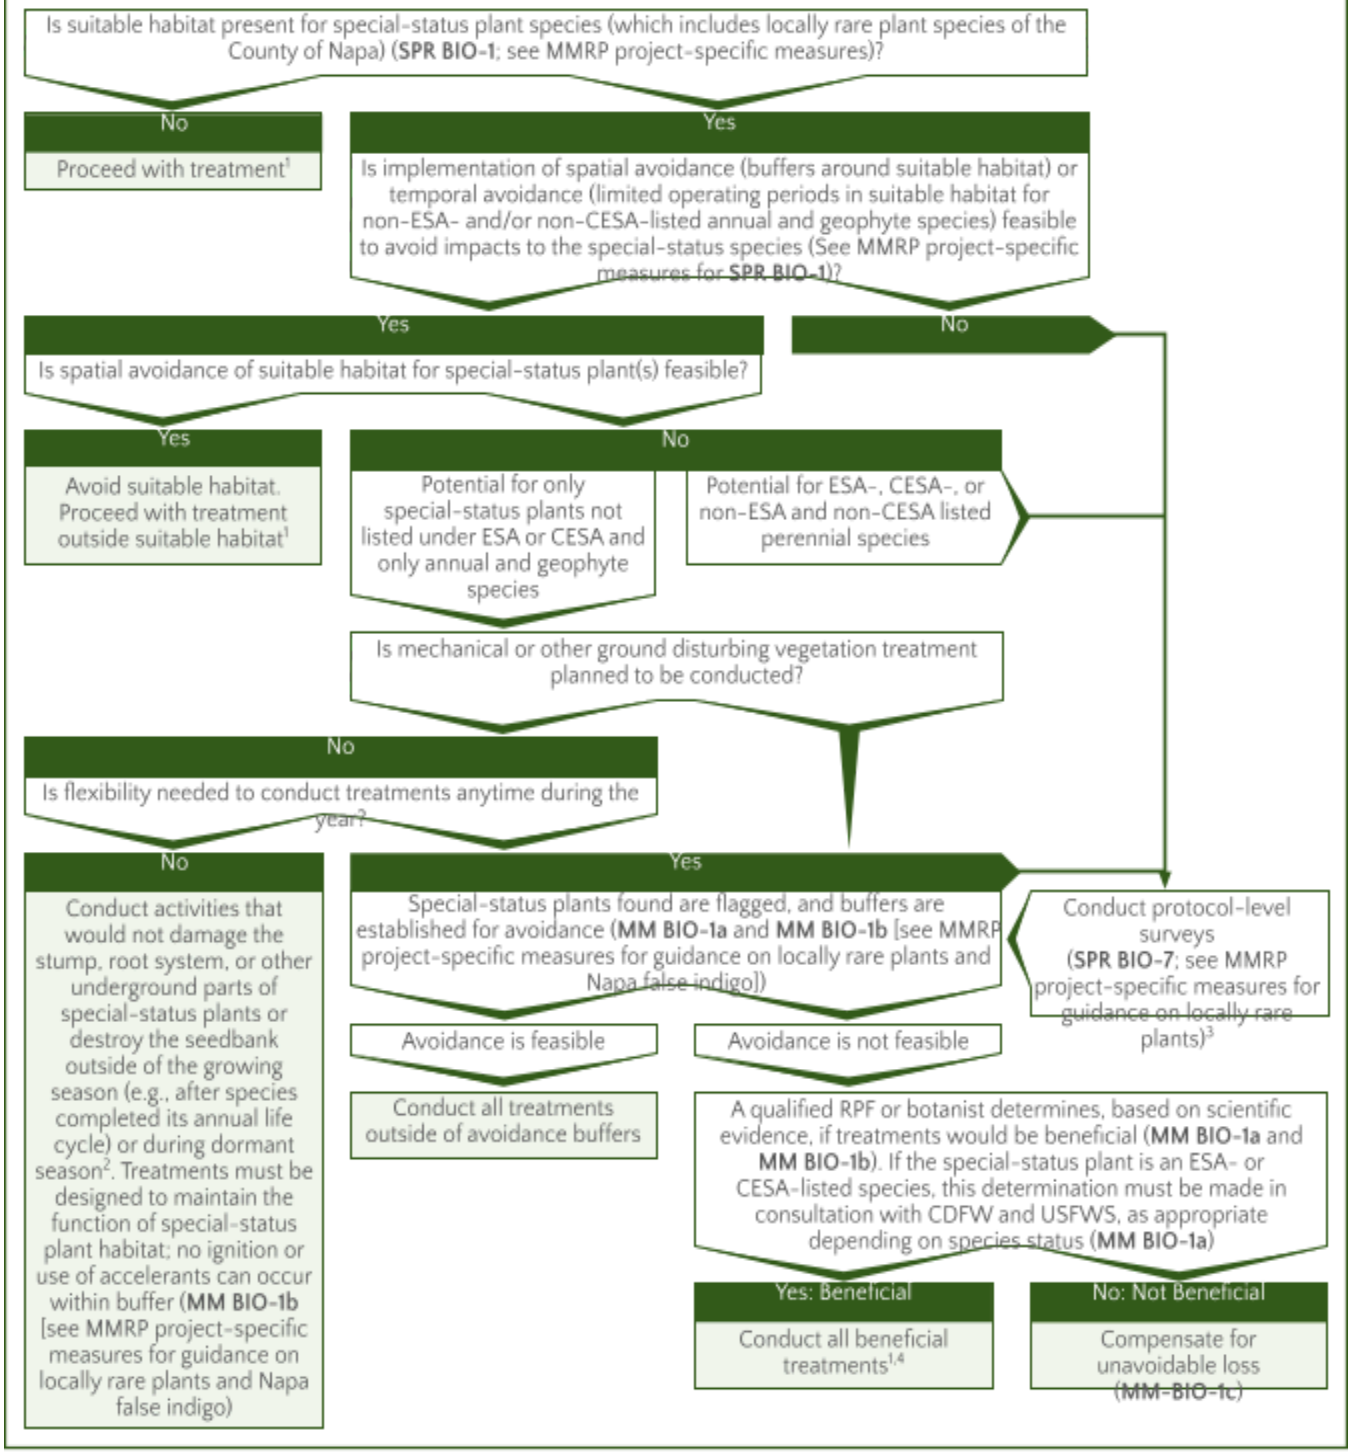
Special-Status Plant Measures Flow Chart



Notes: CESA = California Endangered Species Act; ESA = Endangered Species Act

1 Proceed with treatment in compliance with other applicable measures.

2 Dormant Season: When the plant has no aboveground parts, which would typically occur after seed set and before germination[5].

3 If surveys are conducted outside of the blooming period, all plant species will be conservatively identified to genus.

4 Document as evidence that treatment would be beneficial in the PSA, PSA/Addendum.

5 Germination: Typically, germination will occur after the first significant rainfall (approximately 0.5 inches) and cold snap, which generally occur October-December.
