Abstract
A single paragraph set 250-300 words, including keywords and classification. The following points should always be featured: (1) Purpos is where you explain 'why' you undertook this study. If you are presentin or novel research, explain the problem that you have solved. If you are bu upon previous research, briefly explain why you felt it was important to This is your opportunity to let readers know why you chose to study thi or problem and its relevance. Let them know what your key argument o finding is. (2) Design/methods/approach: This is 'how' you did it. Let r know exactly what you did to reach your results. For example, di undertake interviews? Did you experiment in the lab? What tools, me protocols, or datasets did you use? (3) Results: Summarize the article's findings; Here, you can explain 'what' you found during your study, whe answers the problem you set out to explore, and whether your hypothes confirmed. You need to be very clear and direct and give exact figures than generalize. It is important not to exaggerate or create an expectatio your paper will not fulfill. (4) Conclusion: Indicate the main conclusi interpretations. The abstract should be an objective representation of the it must not contain results which are not presented and substantiated main text and should not exaggerate the main conclusions. This is opportunity to provide readers with an analysis of the value of your resu a good idea to ask colleagues whether your analysis is balanced and fa again, it is important not to exaggerate. You can also conjecture what research steps could be. Choose a category for the paper that best describ may be a Research paper, Viewpoint, Technical paper, Conceptual pape study, Literature review, or General review

Introduction

The introduction should outline the aims of your paper and describe why the topic is important and what it contributes to the body of knowledge. You should also provide background to the research project, highlight the structure of the paper, and explain what made you decide to research this topic/write the article.

Provide broad definitions and discussions of the topic and incorporate views of others (literature review) into the discussion to support, refute, or demonstrate your position on the topic. Please highlight controversial and diverging hypotheses when necessary. Finally, we briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research.

Methods

This section describes how the research was conducted. The primary materials of this section are (1) research design; (2) population and sample (target of research); (3) data collection techniques and instrument development; (4) and data analysis techniques. For research using tools and materials, it is necessary to write down the specifications of the tools and materials. The tool specifications describe the sophistication of the tools used, while the material specifications describe the types of materials used. Qualitative research such as classroom action research, ethnography, phenomenology, case studies, and others, it is necessary to add the presence of researchers, research subjects, informants who helped during the research and ways to explore research data, location and duration of research as well as descriptions of checking the validity of research results.

Result

This section may be divided into subheadings. It should provide a concise and precise description of the experimental results, their interpretation, and the experimental conclusions that can be drawn.

1.1. Subsection

1.2. Subsection

1.2.1. Subsubsection

1.2.2. Subsubsection

Numbered lists can be added as follows:

(1) One

(2) Two

(3) Three

The text continues here.
All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

(**a**) (**b**)

Figure 1. This is a figure; Schemes follow the same formatting. If there are multiple panels, they should be listed as (**a**) Description of what is contained in the first panel; (**b**) Description of what is contained in the second panel. Figures should be placed in the main text near the first time they are cited. A caption on a single line should be centered.

Table 1. This is a table. Tables should be placed in the main text near the first time they are cited.

Title 1	**Title 2**	**Title 3**
entry 1	data	data
entry 2	data	data [1]

Discussion

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

Conclusion

The conclusion should summarise the main state of play at the point of writing and consider the next steps. Summarise and conclude, restating the main argument and presenting key conclusions and recommendations—state how your findings/new framework can be applied in practice. Explain what the implications are for further research.

Declarations

Author contribution statement

Specifies the exact contributions of each author in a narrative form.

Funding statement

The funding agency should be written out in full and include the grant number, which can be included in brackets. The funding agency needs to be listing in the "Organization Name." If there is only one funding agency: This research was supported by the Organization Name [grant number xxxxxx]. If there are multiple agencies or grant numbers, then it should be formatted as such: This research was supported by the Organization Name [grant numbers xxxxxx]; the Organization Name [grant number xxxxxx]; and the Organization Name [grant number xxxxxx]. If there is no funding information, they should state: This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors. If an organization providing support that was not monetary (maybe they provided facilities, survey samples, etc.), please mention that that organization supported the research.

Data availability statement

| 3

Data availability statements provide a statement about where data supporting the results reported in a published article can be found - including, where applicable, hyperlinks to publicly archived datasets analyzed or generated during the study.

Declaration of interests statement

The authors declare that they have no known competing financial interests or personal relationships that could have influenced the work reported in this paper. Alternatively, The authors declare the following financial interests/personal relationships, which may be considered as potential competing interests.

Additional information

Additional information in a narrative form.

References

References should relate only to the material you cite in your article (this is not a bibliography). References must use APA 7th edition style and be listed alphabetically. References must include sources from at least three reputable international journals and must include at least two references from the al-Athfal STAINU Purworejo journal. Do not include any abbreviations. Any additional references should be included in the Additional Reading section.
