Petition to Replace All the Drinks in Plastic Bottles in Institution's Vending Machines with Drinks in Aluminum Cans

Single-use plastic water bottles are littering our streets and parks, clogging our oceans and rivers, filling up our landfills, and poisoning our air when they're burned in incinerators. Less than 1/3 of all plastic bottles are recycled in the U.S. Plastics also have a negative impact on climate change, contributing to greenhouse gases at every stage of its lifecycle. Aluminum cans, by contrast have the highest recycling rate of any beverage containers in the U.S. and can be recycled into new cans over and over again. Most beverages sold in plastic bottles are also available in aluminum cans, making this an easy change to make to slow climate change, reduce plastic waste, and reduce microplastics contamination.

We, the undersigned, urge you to replace all drinks sold in plastic bottles with drinks sold in aluminum cans in the vending machines on the premises of Institution by date.
