

What is the reader's current situation?

-They feel like anatomy is almost an impossible topic to master, because there are way too many different things to memorize, also, many of them complain that the way is taught is sub-optimal, with only a few classes and way too many books/material to study by oneself with no immediate practical application, which makes everything even more soul-crushing.

-If they stay there they will fail their exams, and not make it to the later stages of their respective medical careers (different ones: MD, P-Therapist, etc...,)

What is their dream state?

-Their dream is to be able to learn and above all understand anatomy, they are medical students so their careers are different but in some ways alike, they all want to get good grades, and learning anatomy is paramount not only to graduate but also to be competent professionals in their respective fields.

-They'll feel highly accomplished and competent since anatomy is both necessary to become professionals (doctors, surgeons, imaging techs, p-therapist, etc...,) and also notoriously difficult to learn and understand.

-They'll be perceived as smart and competent because most students struggle with this topic (one person said that less than 50% of students approved anatomy at their UNI, and most of them just barely made it), besides that, the ultimate goal is to become a medical professional, and most of those careers are seen as "high-status" careers.

What is the unknown part of the problem keeping them from their dream state?

-They have tried their school approach (classes and textbooks) along with other methods like flashcards, and watching videos on youtube, but it does not work due to the lack of connection, it all still feels like loose info floating around.

-If they can connect all the information using visual, audio, and interactive materials they will have a much easier time learning anatomy.

How does your product/service solve their problems and carry them to their dream state?

-It provides all there is to know about biology in a well-structured manner and combines all the learning methods (visual, audio, interactive) in one platform, they give their suggestion as to in what order these methods should be employed. Still, it can also be changed if the student can find a more optimal way for them.

-They remove risk by providing a full money-back guarantee during the first seven days after purchasing a premium plan. Regarding the veracity of the learning materials, everything is curated and verified by experts. It is also up to date with whatever new findings are made by the medical/scientific community.

-It saves time by providing students with a step-by-step process that encourages maximum learning for the subject at hand, it also provides the students with the possibility of customizing their learning path if something works best for them, along with a handy search bar in every tab to find any specific part they might be interested in.

-All of the above makes it easier than otherwise.

Context: This is the first of two **YouTube community posts** I'm practicing with (Free value/practice) I'll be adding an image when is time to send it, for now I'm focusing on my writing skills.

The better way to learn anatomy.

Do you feel like learning anatomy with your textbooks is a soul-crushing experience? Get ahead of your classmates using this “tactical” approach that uses the perfect mixture of all the best learning stimuli to master your anatomy and get the grades to show for it.

You’ve probably realized that trying to brute force anatomy into your brain by reading your textbooks for long repetitive hours is frustrating and mostly fruitless.

Learning anatomy should be engaging, fun, and goal-oriented, allowing you to keep your momentum and increase your knowledge.

To that end, you should study using both passive and interactive methods to squeeze every bit of knowledge out of your learning material.

Are you ready to master your anatomy knowledge and be at the top of your class? Click the link below to get started today!
