Title:	A table
Design	
Recognise the need... What is the problem that you need to create something for	We need to create a table that is strong enough to hold 5 m and m's
Generate ideas **Complete some research to support a solution.**	 We chose this example because it was one that no other group had done and we wanted to be different.
Design a prototype and record your ideas about why it is the best solution.	We created a prototype that was very successful. We made the chair with tape straws and newspaper.
Reflection **These are our results....**	The table was very good I could hold more than five m and m's which is pretty good. I think it was very good because we used a lot of tape and raped it around the legs to make it very strong.
