John Doe

Python developer

Caracas, VE
me@gmail.com

EXPERIENCE

Developer, Toncan Digital - *Jun/2016 - Sept/2016* - Caracas, VE

- Built and maintained a website with HTML, CSS and Javascript.
- Used marketing automation tool MailChimp to handle mailing list and outreach efforts.
- Implemented Google Analytics to measure user engagement.
- Created a Social Media campaign and established the brand online via Social Networks.
- One particular challenge was that the client wanted to show his products. I proposed building a simple product slideshow for the catalog. Using ResponsiveSlide.js, I was able to develop a slideshow gallery to display product images on their specific category.

Python Developer, Grupo Banklot - *Ago/2014 - Dic/2014* - Caracas, VE

- Provided help in developing betting sports platform with Django, PostgreSQL, Redis
- Helped with setting their admin site with filtering, adequate display and search.
- Learned fundamentals about Django, how its ORM, admin, CBV and Templates language works.
- Learned team work and use git and github.

EDUCATION

Present Platzi

2012 Bachelor Degree on Secondary Education

FURTHER EDUCATION

2018 Platzi - Administration of Servers and DevOps

- Docker, Docker Compose. Continuous Delivery, Continuous Integration

2017 Platzi - Backend Developer with Python

- Python 2.7 and 3, solve problems with it.
- Fundamentals of Django: ex. Models, Templates & Views, Functions Views, ORM, Forms

2017 Platzi - Frontend Architect

- How to build websites and better code writing, animations, responsive design, include Javascript and jQuery.
- CSS Flexbox and CSS Grid.
- Build a project with the modifications of the animations.

2015 Platzi - Design of Digital Products and UX

- Fundamentals of UI/UX and the process to create a product end to end, product marketing, copywriting, wireframing, prototype.

PERSONAL PROJECTS

Movie Review: I have created a website similar to IMDB using Django to do reviews of popular movies. The challenge consisted in doing and showing the average of the rating given by the users, and creating a lightweight API for the list and details of the users. I learned a lot about this and I feel more competent to work in these domains in the future.
Hecker New: A clone of Hacker News using Django, allowing the user to submit useful links to the community and the possibility to interact by leaving comments. The commenting system was a challenging part because it was my first time building this kind of feature, but it was a really enjoyable and rewarding project!

SKILLS

- HTML5
- CSS2/3
- Python2.7/3
- Javascript
- Git
- Django
- Fundamentals of Product Design
- UI & UX
- Google Analytics, Google Adwords, Facebook Ads
- Problem Solving
- Teamwork & Planning

Cover Letter

I'm John, I'm based in Caracas, Venezuela and I have been working in the web industry for the last 2 years. I have had a primary focus in Backend Development for the web. I also have a good knowledge in Marketing and UX/UI and Product Design.

I began my degree in Computer Science in IUTIRLA and completed 3 years of the degree, however I was unable to continue studies due to extraneous circumstances. To compensate and continue my learning, I am studying via online on a platform named Platzi, coding small personal projects like Movie Review, Hecker News, To-Do List and exploring other areas like Javascript and React, combining them with Python and Django.

I would say the most enjoyable part of this for me is learning to build interesting apps, solving interesting problems and creating a larger impact. Going forward I'd like to see myself moving deeper into the field of information architecture, automation and design thinking. I'm always vigilant of opportunities to further my skill set!

Thanks for your consideration,

John Doe
