Some people say that it is possible for a country to be both economically successful and have a clean environment. Others disagree. Discuss both views and give your opinion.

Some individuals believe that a country can succeed in economic fields, while, concurrently, they will have no negative effects on the environment. In contrast, others argue that it cannot. From my perspective, I tend to be sympathetic towards the view that boosting economic growth can lead to environmental hazards.

On the one hand, a nation can both achieve thriving and flourishing economic progress and conserve the environment at the same time. Tourism is now regarded as one of the most essensial fields that gives rise to economic development in several countries in the world. In order to protect the environment and make a fortune, governments tend to offer eco-tourism to foreign and domestic tourists, which is environmentally friendly. ⇒ body này đang lệch so với body 2 xem thêm ý phía dưới để bổ sung thêm hoặc ít nhất cần cho 1 ví dụ vào nhé

On the other hand, in a plethora of ways, environmental issues which are related to pollution directly and indirectly stem from economic growth. Take Da Nang, Viet Nam as one of the most famous cases, since 2000, the authority has allocated more finance to the construction to industrial zones around the city with an aim of boosting economic strides. Yet according to scientific research from Da Nang University, those industrial areas

attributed to the ceaseless increase in the amount of emissions gas, which is detrimental to the environment in a serious manner. Another point is that, in a large number of nations, the environment can seriously suffer from tourism. To make a progress in business, businessmen can offer their potential customers services which result in the depletion of natural resources in those nations. To illustrate the point, in several coastal metropolises, the restaurants catch a huge number of sea creatures to meet the high customers' demand, giving rise to natural degradation down the road.

In conclusion, individuals have differents opinions on economic strides and environmental conservation. According to my view, a government cannot protect the environment when they strive to reach a thriving and flourishing economy.

- Dạng discuss both views có thể bố cục bài như sau:
  - Body 1: Viết về quan điểm Others disagree
    - Main idea: Economic progress often comes at the cost of environmental degradation.
      - Supporting idea:
        - Rapid industrialization, resource exploitation, and excessive consumption can lead to pollution, deforestation, and other ecological challenges.
        - The pursuit of economic gains can sometimes overshadow concerns for environmental well-being,

resulting in long-term negative consequences for both the ecosystem and human health. >> IELTS TUTOR hướng dẫn Cách paraphrase "outweigh", "advantage" & "disadvantage...

- Example:
  - An illustrative case is the BP Deepwater Horizon oil spill in the Gulf of Mexico in 2010, resulting from a blowout during BP's drilling of an oil well, releasing approximately 210 million gallons of oil into the Gulf
  - This leads to extensive environmental devastation, including the death of numerous marine creatures, destruction of wetlands and marshes, closure of fishing areas, and adverse effects on human health

- Body 2: Viết về quan điểm Some people say that it is possible for a country to be both economically successful and have a clean environment. & nêu rõ mình ủng hộ quan điểm này
  - Main idea 1: With proper planning and strategic policies, a country can strike a balance between economic growth and environmental preservation.
    - Supporting idea: This involves adopting sustainable practices, investing in green technologies, enforcing strict regulations,

and promoting responsible consumption and production methods.

- Example:
  - For example, Costa Rica boasts a high GDP per capita and a low carbon footprint, an accomplishment attributed to a blend of factors such as investments in renewable energy, emphasis on sustainable agriculture, and dedication to environmental protection
  - Another example is Denmark, characterized by a high standard of living and a clean environment, achieved through various policies including a carbon tax, emphasis on energy efficiency, and a strong commitment to renewable energy.

- Main idea 2: Advancements in technology and sustainable practices can lead to increased economic activity without causing irreparable harm to the environment >> IELTS TUTOR hướng dẫn Cách dùng tính từ"irreversible"tiếng anh
  - Supporting idea: Because advancements in technology and the adoption of sustainable practices allow for the optimization of resource utilization, reduction of waste, and minimization of environmental impacts, thereby enabling

economic growth to occur without inflicting permanent damage on the ecosystem.

- Example: Technologies like LED light bulbs, smart thermostats, and energy-efficient appliances have the potential to assist businesses and consumers in lowering energy expenses, while also contributing to the reduction of greenhouse gas emissions and air pollution.
