AP PRECALCULUS · UNIT 1.5 · WORKSHEET VERSION D

Name: _____ Date: _____ Period: _____

1. For $P(x) = 2(x + 4)^2(x - 5)x$, state the degree, all real zeros, and each multiplicity.

2. Factor completely over the real numbers: $P(x) = x^3 - 3x^2 - 34x + 120$.

3. A polynomial has real coefficients and one zero $4 - 5i$. State the required non-real zero and explain.

4. A real-coefficient polynomial has zeros $x = -4$ (multiplicity 3), $x = 5$, $x = 6i$, and $x = 4 + 5i$. Find its least possible degree.

5. Write a monic polynomial of least degree with real coefficients and zeros $x = -4$ (multiplicity 2) and $x = 5i$.

Name: _____ Date: _____ Period: _____

6. Given $P(x) = x^3 + 4x^2 + 25x + 100$ and a zero $5i$, find all zeros and factor P over the complex numbers.

7. Find all complex zeros and write a linear factorization: $P(x) = x^3 - 5x^2 + 4x - 20$.

8. Use equal-spaced inputs to identify the degree of this polynomial from its table.

x	0	1	2	3	4	5
$P(x)$	3	6	13	36	87	178

9. Classify $f(x) = 4x^5 - 5x^3 + 6x$ as even, odd, or neither. Prove using $f(-x)$.

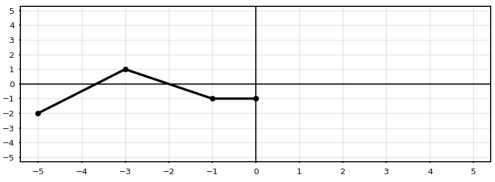
10. The table gives a function defined on these inputs. Classify as even, odd, or neither and justify.

x	−2	−1	0	1	2
$f(x)$	5	6	0	6	5

Name: _____ Date: _____ Period: _____

11. An even function h has $h(-4) = 20$, $h(2) = 6$, $h(-1) = -5$. Find $h(4)$, $h(-2)$, $h(1)$.

12. The displayed left-half graph belongs to a(n) even function. Complete the graph for $0 \le x \le 5$ and list coordinates of the reflected marked points.



13. An odd function g has $g(-3) = -8$ and $g(5) = 15$. Find $g(3)$, $g(-5)$, and the average rate of change on $[-3, 5]$.

14. Solve $(x + 4)^2(x - 5)(x - 8) \le 0$. Use a sign chart and interval notation.

15. For $f(x) = x^2 + 6$ and $g(x) = 22$, solve $f(x) \ge g(x)$. State the x-intervals where f is on/above g.
