Privacy Policy

Copy to SIM Card

Last updated 13 November 2026

This Privacy Policy explains how Copy to SIM Card (the App) handles information when you copy, manage, back up, import or share contacts. In this policy, we, us and our refer to the provider of the App. You do not need to create an App account. Contact operations take place on your device, while optional analytics, crash reporting, purchases and support communications may involve information being processed outside your device.

1 Contact information and local processing

The App accesses the contact names, telephone numbers and contact account information needed for the features you choose. It can read and write phone and SIM contacts, prepare vCard files, create contact QR codes and process contact details from files or QR codes that you select. The App does not operate a cloud address book or upload your address book to a server that we maintain.

When you save contacts to an account available through Android, that account's synchronization service may sync them according to its own settings. When you export, save or share a file, the destination or service you select receives that information. Those actions are initiated by you and are separate from our usage analytics. Camera frames used for scanning are processed on your device and are not saved or uploaded by the scanner. A QR image is saved or shared only when you choose that action.

2 Device permissions

Contacts permission allows the App to read, copy, create, edit and delete contacts on your phone or SIM as requested. Phone permission is requested on supported older Android versions to identify available SIM cards. The App may read a SIM's carrier name, country code, slot, contact capacity and storage limits. It does not collect your SIM serial number, IMSI or your own mobile line number for analytics.

Camera permission is requested when you choose to scan a contact QR code. File import and export use Android's file picker; sharing uses Android's share sheet. You can revoke permissions in Android settings. A feature may stop working without the permission it needs, but permissions are not used to authorize unrelated uses of your information.

3 Optional analytics and crash reporting

The App uses Firebase Analytics and Firebase Crashlytics to understand feature use, diagnose errors and improve reliability and device compatibility. When enabled, these services may process app instance and installation identifiers, the Android advertising ID when available, device model and operating system, app version, language, approximate region derived from network information, session and screen events, feature interactions, and purchase-related events. Crash reporting may include crash and error stack traces, app state and diagnostic information.

Our own events also describe copying direction, counts of selected or processed contacts, success and failure counts, error categories, processing time, carrier and SIM country information, SIM capacity and storage limits, and whether a support purchase has been recognized. We do not use contact names, telephone numbers, contact account names, searches, vCard contents or QR contents as analytics parameters. Pseudonymous identifiers can still be personal information even without a registered account.

The current App does not display advertisements. Where collected, the advertising ID is used for analytics; the App does not request advertising personalization. It does not request precise location permission for these purposes. Information handled by these services is subject to their applicable service and privacy terms. Further information is available at https://firebase.google.com/support/privacy and https://policies.google.com/privacy.

4 Consent and your settings

The App is configured to ask for consent before enabling analytics and crash reporting for users identified as being in the European Economic Area, the United Kingdom or Switzerland. It uses available SIM or network country information, then device locale, to determine whether to show that request. In other regions these features may be enabled by default, subject to applicable law.

You can turn off Send usage statistics and crash reports in the App's Settings at any time without losing contact-management features. The App uses one switch for both services. Turning it off stops further collection through those services as configured by the App and requests deletion of pending, unsent crash reports. It does not automatically erase information already transmitted. Android's advertising ID controls provide additional choices but do not replace the App's analytics setting.

5 Purchases and communications

Optional one-time support purchases are processed through Google Play. The App processes information needed to recognize and restore purchases, such as product identifiers, purchase status and purchase tokens. Purchase-related events may also be recorded when analytics is enabled. We do not receive your payment card number or payment account password through the App. Google Play handles payment information under its own terms and privacy practices.

If you contact support, we receive the information you choose to send, which may include your reply details and message. The App's feedback action may add the app version, Android version and device model to help troubleshoot. Please avoid sending contact lists or other people's personal information unless it is necessary for your request and you are authorized to share it.

6 Purposes and disclosures

Information is used to provide requested features, recognize purchases, respond to support requests, maintain security, investigate errors and improve the App. Where consent is required for optional collection, we rely on that consent. Other processing may be necessary to provide the service you request, meet legal duties or pursue legitimate interests permitted by applicable law, such as addressing misuse and maintaining reliability.

Information may be handled by the service providers described above, by recipients you select, or when reasonably necessary to comply with a valid legal obligation or protect legal rights and safety. We do not sell your personal information or use your address book for advertising. No permission to share your contacts with an unrelated recipient is created merely by installing the App.

7 Retention and deletion

Contacts written to your phone, SIM or a synchronized account remain there until you or that account's service deletes them. Exported vCard files and saved or shared QR images remain in the locations or services you choose. Uninstalling the App does not delete those contacts, exported files or recipients' copies. You can manage them through the relevant contacts, file or sharing service.

App preferences and cached settings are stored locally and may be removed by clearing App data or uninstalling, subject to Android backup and restore settings. Purchase records may remain with Google Play and can be used to restore a valid purchase. Analytics, diagnostic and support information is retained according to its purpose, the service's applicable retention settings and any legal requirements, and is deleted or de-identified when no longer needed for those purposes.

You may request information about or deletion of data associated with you through the contact options below. Whether we can locate a particular analytics or diagnostic record depends on the identifiers and information available. We may ask for proportionate verification and may retain information that law requires or permits us to keep. An opt-out or uninstall is not a request to erase previously transmitted data.

8 Security and international processing

We use reasonable measures appropriate to the information and service. Firebase services encrypt transmitted information using HTTPS or TLS. Local contacts and files are subject to Android's permissions and the security of your device and chosen destinations. No method of transmission or storage is completely secure.

Information processed by Firebase, Google Play or a support service may be processed outside your country. Applicable protections and transfer arrangements depend on the service and relevant law. The privacy information linked above explains the providers' practices. This policy does not reduce any safeguards or rights required by law.

9 Your rights and children

Depending on where you live, you may have rights to access, correct, delete or obtain a copy of personal information, restrict or object to processing, withdraw consent, or complain to a privacy regulator. You can exercise applicable rights through the contact channels below. Withdrawing consent does not change the lawfulness of earlier processing. We will not deny ordinary App features solely because you exercise a privacy right or disable optional analytics.

The App is a general-purpose contacts utility and is not directed to children under 13 or a higher minimum age required locally. We do not knowingly seek personal information from children for optional analytics or support. If you believe a child has supplied information that should not have been collected, contact us so that the matter can be reviewed and appropriate action taken.

10 Changes and contact

We may update this policy when the App or its processing changes. The updated date will identify the latest version. Where law requires notice or fresh consent for a material change, we will provide it before applying the change.

For privacy questions or requests, use Send feedback in the App's About screen or the developer contact option on the Copy to SIM Card Google Play listing. Identify the App and the nature of your request, and do not include your address book or payment credentials. This policy applies to Copy to SIM Card with package identifier copy.to.sim.card.app.mobile.
