## Swap SUI to XMR

SUI goes in, XMR comes out. This page shows what the swap costs, how long it takes, and where your Monero ends up.

- **No KYC to start** · Privacy-first
- **Non-custodial**
- **Fast routing**
- **No wallet connection**

Any coin in, private XMR out to your own wallet.

- **Minimum Deposit:** 15.5593 SUI (SUI Sui , change coin)
- **Reverse Swap:** Reverse: swap XMR to SUI
- **Estimated Payout:** 0.115348 XMR Monero (1 SUI ≈ 0.00115348 XMR)
- **Estimated Time:** 1 to 15 minutes
- **Address Format:** Starts with 4 or 8. Copy it from your own Monero wallet.

### Deposit & Address Guidelines

- **Sending to an exchange account?** Copy the memo it shows next to the deposit address. Without it, the coins may never reach your account.
- **Personal wallet:** Check "My address does not need a memo (a personal wallet)".
- **Refund address (optional):** If the swap cannot be completed, your coins go back here. Add it if your refund address is on an exchange.

No account and no wallet connection needed. By starting a swap you accept the Terms of Service.

**Share this swap:** Telegram | Post on X

### SUI to XMR Chart

- **Current Rate:** 0.00126448 XMR (-11.22%)
- **XMR per 1 SUI (Last 7 Days - Nov 18 to Nov 25):** Low **0.00126448 XMR** · High **0.0015005 XMR**
- **Market Data Source:** Market data from OKX. XMR is priced from OKX's market for wrapped Monero on Solana, which tracks XMR. Swap quotes include fees, so they differ slightly from this line.

### SUI to XMR Calculator

The table below refreshes with the market. Right now one SUI gets 0.00115348 XMR before the service fee is applied.

You send,You get about,Rate
50 SUI,0.0531714 XMR,1 SUI ≈ 0.00106343 XMR
500 SUI,0.612746 XMR,1 SUI ≈ 0.00122549 XMR
"5,000 SUI",6.18022 XMR,1 SUI ≈ 0.00123604 XMR

### At a Glance

- **Minimum:** 15.5593 SUI

- **Maximum:** No fixed limit
- **Usual time:** 1 to 15 minutes
- **SUI network:** Sui
- **Account:** Not needed
- **Fees:** Included in the estimate

### Worked Example: 500 SUI

Here is what a 500 SUI order looks like from start to spendable XMR:

- **Minute 0 — Set up the order:** You enter 500 SUI and choose XMR as the coin you want to receive. The page locks in an estimate of 0.612746 XMR at that moment, which holds only while the market does not move.
- **Minute 1 — Move SUI into the deposit address on the order screen:** The service shows a Sui address created for this order alone. Send exactly 500 SUI from a wallet whose keys you hold, in a single transaction, and keep the hash.
- **Minute 2 — Sui confirms the deposit:** Sui finalises simple transfers in under a second, so the deposit is usually visible immediately. The service waits for the transfer to be credited to the order before it starts converting.
- **Minute 3 — The SUI is converted to XMR:** Your SUI is sold and XMR is bought at the rate in force when the deposit clears. A fast market move in this window is the main reason the final figure can differ from the estimate.
- **Minute 4 onward — XMR lands in your wallet:** The service sends 0.612746 XMR to the Monero address you provided. Once the transaction is confirmed and your wallet has synced, the coins are spendable and the transfer is private on the Monero side.

**Order Breakdown:**

- **You send:** 500 SUI
- **You get about:** 0.612746 XMR
- **Rate:** 1 SUI ≈ 0.00122549 XMR
- **Exchange and payout fees:** Included
- **Estimated time:** 1 to 15 minutes
- **Order Action:** Swap 500 SUI

### How to Swap SUI to XMR

Four steps, and the only part that needs your attention is the two addresses.

1. **Choose the amount and clear the minimum:** Type the SUI figure and confirm it clears 15.5593 SUI, the live floor for this pair. Anything below that will not be accepted by the order form.
2. **Copy the deposit address and send from your own wallet:** Use the exact Sui address shown on the order page and nothing else. Sending from an exchange account can work, but you give up control over the timing of the withdrawal.
3. **Let Sui confirm:** Sui settles in under a second for a simple transfer, and the page updates when the deposit is credited. From there the conversion runs without input from you.

4. **Give a Monero address you control:** Paste your own XMR address and check the first and last characters against your wallet screen. The XMR goes to that address once, and Monero transfers cannot be reversed.

### Before You Start

- Have a Monero wallet installed and synced before you start. A fresh wallet can take a while to scan the chain, and you want that wait behind you.
- Check the quote and the minimum in the same look. A quote seen ten minutes ago is history, and the order uses the rate at the moment your deposit clears.
- Budget 1 to 15 minutes from deposit to spendable XMR. Sui is quick, so most of that time sits in the conversion and the Monero confirmation.
- Save your Sui transaction hash somewhere you can find it. Support cannot trace an order without it if the deposit needs to be matched by hand.

## Common Reasons for Converting SUI into XMR

- **Leaving a public balance behind:** Sui publishes every transfer and every balance tied to an address. Moving value into Monero puts the resulting holding on a chain where the record is closed to outside readers.
- **Hiding the size of the transfer:** Ring confidential transactions encrypt the amount of each Monero payment. On Sui the exact figure is visible to anyone who looks up the transaction.
- **Holding a coin with a different supply model:** SUI has a fixed maximum supply and a release schedule. Monero switched to a permanent tail emission in 2022, which pays miners indefinitely and keeps the supply growing at a steady, predictable rate.
- **Moving from a young chain to an established one:** Sui opened its mainnet in 2023 and is still building out its ecosystem. Monero has run since 2014 and has shipped its privacy changes as scheduled hard forks.

## Where Your SUI Goes

The coins pass through four points, and only two of them are yours:

1. **Your Sui wallet:** SUI leaves an account you signed for, and the transaction is authorised on your device.
2. **One-time deposit address:** The service hands you a Sui address generated for this order, which is how it matches an incoming transfer to your quote.
3. **The exchange converts:** The SUI is sold and XMR is bought, and at this point the service can see both the amount you sent and the address you asked for.
4. **Your Monero wallet:** XMR arrives at an address only you hold the keys for, and the Monero ledger hides the amount from everyone else.

### What Each Blockchain Shows

- **Sui (Public):** Sui records the deposit as an ordinary transfer, with sender, receiver, amount and timestamp all readable. Anyone who knows your Sui address can see that a swap-sized amount left it, even though the destination is only an order address.

- **Monero (Private):** Monero records the incoming XMR behind a stealth address, a ring signature and an encrypted amount. Your balance and the size of the transfer stay out of view for anyone reading the chain.

### Monero Wallets That Hold Your XMR

These wallets keep the keys with you and can receive the XMR directly.

Wallet,Runs on,Type,Good to know
Cake Wallet,"iOS, Android","Mobile, non-custodial",Supports XMR alongside several other coins and can connect to your own node.
Feather Wallet,"Windows, macOS, Linux","Desktop, non-custodial","Light and quick to start, popular with people who run a local Monero node."
Monero GUI,"Windows, macOS, Linux","Official desktop wallet, non-custodial",Ships with the Monero project and can run a full node on the same machine.
Monerujo,Android,"Mobile, non-custodial",Android wallet that works with a remote node or one you run yourself.

### What is Sui (SUI)?

Sui is a layer 1 blockchain that opened its mainnet in May 2023. It was built by Mysten Labs, a team that came out of Meta's Diem research work, and it uses a programming language called Move. The chain is object-centric: assets exist as objects that can be passed straight between transactions, which is how simple transfers reach finality in under a second. SUI is the native coin and pays for gas, storage and staking.

Most activity on Sui is DeFi, gaming and consumer apps that gain from cheap, fast transactions. Gas is low enough that small actions, such as claiming a reward or moving a token, stay affordable, and the same low cost applies to the deposit you send for a swap. SUI is staked to validators through the wallet rather than a separate contract in most setups. Total supply is capped at 10 billion SUI, with part of it released over time.

Sui addresses are 32 byte hex strings beginning with 0x, followed by 64 hex characters. A plain transfer carries no memo or tag, so the deposit address itself is what ties a payment to an order, and a transfer to the wrong address cannot be recalled by the service. Holding SUI means holding a key to an account on a public ledger, where balances and history can be read by anyone who has the address.

#### Sui Facts

- **Ticker:** SUI
- **Network:** Sui
- **Memo:** Not used
- **Mainnet:** May 2023
- **Native coin:** SUI
- **Max supply:** 10 billion SUI
- **Block time:** Under 1 second
- **Contracts:** Move language

## What is Monero (XMR)?

Monero is a layer 1 chain that has run since April 2014 and is built around privacy at the protocol level. Where Sui publishes sender, receiver and amount for every transfer, Monero hides all three by default. Ring signatures mix your input with others, stealth addresses give each payment a one-time destination, and RingCT encrypts the value. None of it requires a special wallet setting, because it is how the chain works.

The supply model differs as well. Monero has no hard cap: each block pays a fixed tail emission of 0.6 XMR, which keeps miners funded after the main emission ended in 2022. Blocks arrive roughly every two minutes. That arrangement is deliberate, since a permanent reward pays for security without leaning on transaction fees alone. Sui, by contrast, works to a fixed maximum supply and funds security through gas, storage fees and staking rewards.

Receiving Monero is simple. Addresses start with 4 for a primary account and 8 for a subaddress, and a normal XMR transfer needs no memo. The trade-off is size: the privacy features make Monero transactions larger than Sui transfers, and fees reflect that, though they stay small in practice. Wallets such as Cake Wallet, Feather and the official Monero GUI let you hold keys yourself and scan incoming payments.

### Sui and Monero Side by Side on Privacy

- **Balances:** On Sui, anyone with your address can read your balance and the full list of transfers. On Monero your balance is visible only to you and anyone you hand your view key.
- **Amounts:** Sui publishes the exact figure for every transfer it settles. Monero encrypts the amount with RingCT, so only the two parties to the payment can see it.
- **The spending trail:** A Sui address is not tied to a name by the protocol, but its history is open to anyone who looks. Monero's ring signatures mean an outside reader cannot tell which output in a ring was actually spent.
- **What the swap itself shows:** The swap service handles both sides, so it sees the SUI you send and the XMR address you name. Monero's privacy starts once the coins reach a wallet you control.

## Sui vs Monero

Two designs with different priorities; the table below lists how Sui compares with Monero.

Feature,Sui,Monero
Launched,May 2023,2014
Privacy,Public balances and amounts,Private for every transaction
Amounts on chain,Visible on chain,Hidden
Sender and receiver,Sender and receiver public,Hidden
Block time,Under one second,About 2 minutes
Supply,Capped at 10 billion SUI,"No cap, 0.6 XMR per block"
Consensus,DAG-based consensus,"Proof of work (RandomX, CPUs)"
Typical fee,"Paid in SUI, very low",Usually a few cents
Smart contracts,Move language,No
Address format,0x plus 64 hex characters,Starts with 4 or 8

## Cheapest and Safest Ways to Move SUI into XMR

There are four practical routes, and they differ in who holds your coins and what you have to hand over. The first row is this site.

Method,Account,Typical time,Costs,Who holds the coins
Instant swap (this page),None,1 to 15 minutes,"The service's fee is included in the quoted rate, and you also pay the SUI network fee","Only the swap service, and only for the duration of the trade"
Centralized exchange,Account with identity verification,Minutes to a few hours,Trading fee plus a flat XMR withdrawal fee,The service keeps custody of the coins on each side until you withdraw them.
Peer-to-peer market,"Account on a P2P platform, often with a check","Depends on the counterparty, often under an hour","A margin on the market rate, with payment fees added",Escrow holds the coins during the trade
Two-step swap through a stablecoin on a Sui DEX,A Sui wallet plus a swap service,Longer than a single swap,"DEX fee and spread, then the swap fee on the second leg",You hold the coins between the two steps

The cost of this pair comes in three parts: the spread between the SUI you send and the XMR you receive, a service fee built into the quoted rate, and the Sui network fee on your deposit. Sui gas is small, usually a fraction of a cent, so it barely moves the total. The 0.612746 XMR figure in the worked example already reflects the spread and the service fee.

Monero fees are paid when the XMR is sent to your wallet, and they sit inside the quote rather than on top of it. A centralized exchange usually adds a separate flat fee on XMR withdrawal, which is why an instant swap often works out cheaper on smaller amounts. The final XMR number is the one to judge the swap by.

## Errors to Steer Clear of with SUI and XMR

- **Sending SUI over a different network:** SUI lives on Sui, but some wallets display several chains in one interface. Confirm the deposit address begins with 0x and runs to 64 hex characters before you send.
- **Falling under the minimum:** 15.5593 SUI is the live floor for this pair. An amount below it will not be processed on its own, and recovering it means contacting support with the transaction hash.
- **Withdrawing from an exchange without checking its timings:** Some platforms batch withdrawals or hold them for review. A deposit that lands later than expected can be converted at a rate that has already moved.
- **Pasting an XMR address from a chat message:** Monero payments cannot be reversed. Check the first and last six characters against your own wallet screen, and send a small test first when the amount is large.

## When Something Goes Wrong

Contact options: Telegram support | Contact form

- **The SUI left your wallet but the order still says waiting:** Open your Sui wallet, copy the transaction hash and look it up on a Sui explorer to confirm it went to the address shown on the order page. If it did, send the hash and the order number to support.
- **The XMR has not appeared:** Monero blocks arrive about every two minutes, and wallets need to scan them as they sync. Check the transaction ID from the swap page on a Monero explorer, then resync your wallet if the payment shows as confirmed.
- **Your deposit fell below the minimum:** Do not send a second transfer to top it up unless support asks you to. Contact support with the amount, the order number and the Sui transaction hash so the deposit can be handled as one case.
- **The XMR address you gave was incorrect:** Tell support straight away with the order number. If the XMR has not been broadcast yet, the address can sometimes be corrected, but once it is on the Monero chain the transfer cannot be recalled.

## Sui and Monero History, and the Direction Monero is Taking

Sui is young next to the coin people usually swap it against. Its mainnet opened in 2023, and most of its growth has come from DeFi and consumer apps built on the object model. Monero has been running since 2014 and has changed more slowly, shipping its privacy work as scheduled hard forks.

The next change on Monero's roadmap is FCMP++, which replaces ring signatures with full chain membership proofs. The aim is to remove the statistical weaknesses that appear when ring sizes are small. The work is still in development and has no fixed mainnet date.

- **2014 — Monero starts:** Monero launched in April 2014 as a fork of Bytecoin's codebase, with a proof of work called CryptoNight and privacy built into the protocol.
- **2017 — RingCT hides amounts:** A January 2017 hard fork introduced ring confidential transactions, which encrypted the value of every payment on chain.
- **2018 — Bulletproofs cut transaction size:** Bulletproofs replaced the earlier range proofs in October 2018, making typical transactions smaller and fees lower.
- **2019 — Ring size raised to 11:** A hard fork made 11 member rings mandatory, the size still used today for each input in a transaction.
- **2022 — Tail emission begins:** The main emission finished in June 2022, and Monero moved to a fixed reward of 0.6 XMR per block that continues indefinitely.
- **2023 — Sui mainnet goes live:** Sui opened its mainnet in May 2023, with SUI used for gas and staking from the first block.
- **Next — FCMP++ on the roadmap:** The planned upgrade swaps ring signatures for full chain membership proofs, which would remove the weaknesses of small rings. It is in development with no confirmed activation date.

## Terms Used on This Page

- **Stealth address:** A one-time destination generated for each Monero payment so the receiver's real address never appears on chain.
- **Ring signature:** A Monero signature that mixes your input with others so an outside reader cannot tell which one was spent.
- **Tail emission:** Monero's fixed reward of 0.6 XMR per block, paid indefinitely after the main emission ended.

- **Finality:** The point at which a transaction cannot be reversed by the network, reached in under a second on Sui for a simple transfer.
- **Deposit address:** A one-time address the swap service issues for a single order, which is how an incoming transfer is matched to your quote.
- **View key:** A Monero key that lets a holder read their own incoming transactions without the ability to spend them.

## SUI to XMR Questions

### How do I turn SUI into XMR on this site?

Enter the SUI amount, check the quote and the minimum, then send SUI to the deposit address the page gives you. Provide a Monero address you control and the XMR is sent there once the deposit is credited.

### How much XMR does one SUI buy right now?

One SUI gets 0.00115348 XMR at the moment, before the service fee and the Monero network fee are applied. The rate follows the market, so the figure in force when your deposit clears is the one that counts.

### How small can a SUI to XMR swap be?

The live minimum is 15.5593 SUI. Amounts below it are not processed, and recovering a smaller deposit means contacting support with your Sui transaction hash.

### How much time does a SUI to XMR exchange normally take?

Plan for 1 to 15 minutes from the moment your SUI is confirmed. Sui settles quickly, so most of that time is the conversion and the Monero confirmation.

### Does SUI go directly into a Monero wallet?

No. Sui and Monero are separate chains, and a SUI transfer can only reach a Sui address. The swap service is what turns one coin into the other.

### Does this exchange require a memo or destination tag?

No. Sui transfers and Monero payments to a normal address carry no memo. The deposit address is unique to your order, and that is how the payment is matched.

### Is this swap anonymous?

No. Monero hides sender, receiver and amount on its own chain, but the swap service sees the SUI you send and the XMR address you name. Privacy begins once the XMR reaches a wallet you hold.

### Are taxes due when you convert SUI to XMR?

In most countries swapping one coin for another counts as a disposal, valued at the market rate on the day. Rules vary, so keep the date, both amounts and the address used, and check with a local tax adviser.

### What happens if I send less than the minimum?

The order will not complete by itself. Contact support with the order number and the Sui transaction hash instead of sending a second deposit to top it up.

### Why does my XMR wallet still show zero?

Monero wallets scan blocks as they sync, and a new wallet can take a while to catch up. Look up the transaction ID on a Monero explorer first, then resync the wallet if the payment is confirmed.

## Other Coins You Can Swap to XMR

Going the other way? Swap XMR to SUI
Other pairs on this site run in both directions between Monero and the coins people actually hold:

- BTC to XMR Bitcoin
- ETH to XMR Ethereum
- USDT (TRC20) to XMR Tether on Tron
- USDT (ERC20) to XMR Tether on Ethereum
- USDC (ERC20) to XMR USD Coin on Ethereum
- SOL to XMR Solana
- LTC to XMR Litecoin
- BNB to XMR BNB
- TRX to XMR TRON
- DOGE to XMR Dogecoin
- XRP to XMR XRP
- TON to XMR Gram (ex Ton/TonCoin)

All 771 supported coins
