

do while Repetition Statement

```
/*
  File name: lecture5_1.c
  counter-controlled (do while) repetition
*/
#include <stdio.h>
int main () {
    int counter = 1;
    do {
        printf("%d ", counter);
    } while( ++counter <= 10 );
    printf("\n");
    return 0;
}
```

break and continue Statement in loop

```
/* File name: lecture5_2.c
   break and continue statements in for loop */
#include <stdio.h>
int main () {
    int i, ii;
    printf("Break statement in first loop\n");
    for( i = 1; i <= 10; i = i + 1 ){
        if( i == 5 ) break;
        printf("%d ", i);
    }
    printf("\nLoop is broken at i = %d\n\n", i);
    for( ii = 1; ii <= 10; ii = ii + 1 ){
        if( ii == 5 ) continue;
        printf("%d ", ii);
    }
    printf("\n"); return 0;
}
```

switch-case Statement (1)

```
/*
  File name: lecture5_3.c
  Learning simple switch-case in c-language
*/
#include <stdio.h>
int main () {
    char x;
    float y1, y2;
    printf("Enter operator either + or - or * or divide : ");
    scanf("%c", &x);
    printf("Enter two operands (real numbers): ");
    scanf("%f%f", &y1, &y2);
    switch( x ){
        case '+':
            printf("%.3f + %.3f = %.3f\n", y1, y2, y1 + y2);
            break;
        case '-':
