

Capabilities	Tool 1	Tool 2	Tool 3	Tool 4	Tool 5	Tool 6	Tool 7	Tool 8	Tool 9	Tool 10
Provisioning infrastructure resources										
Provisioning software from library (Websphere, MQ, etc.)										
Provisioning databases										
Provisioning cloud infrastructure										
OS level configuration										
Software configuration										
Security policy configuration										
Network device configuration										
Automated enforcement of OS, app, security configurations										
Task-based automation										
Orchestration of multiple workflows										
Software deployment										
Asset inventory / discovery										
Vulnerability detection and remediation										
Patch management (*nix)										
Patch management (Windows)										
End-state monitoring										
Compliance reporting										
Change reporting and auditing										
Impact analysis reporting										
Infrastructure testing										
Integration with ChatOps tools										
Integration with CMDBs										
Integration with self-service portals										

This resource was created by Alanna Brown and Nigel Kersten of Puppet, both of whom are authors of the State of DevOps Report. Learn more about it at <https://puppet.com/blog/practical-devops-resource-help-standardize-your-toolkit>
