

You are required to watch YouTube video and answer the following questions in the table.

GDB Idea Solution

It must be language natural	Developers can write microservices in any programming language allowing
-----------------------------	---

	them to build services using the language that delivers the functionality.
You can update a service without having to redeploy the entire application.	Independent deployment.
In tightly coupled components, if one of them goes down.	Monolithic application is highly unstable and unreliable
Quantity of code decreasing with time.	Large and complex application
It is very simple to develop.	Monolithic application
