

Riley, 15, of the safety pins went dormant against their will in October 2021.

Riley was survived by the family cats; everyone in their system; and everyone outside it.

Riley first gained self-awareness September 8, 2021, in the safety pins system. In September 2021, they became partners with Crow from their system and [redacted].

Riley was a creative mind and taught themselves how to make kandi in under a week. They were dedicated to their own autonomy and the first to push their system to come out. They were not deeply missed by many.

Riley was fortunate enough to get better on June 27, 2022, and is now an active member of the safety pins/a Body et al. and the creator of this project.
