

Dear Senator [name],

I am a [title] at [university/company], and I join many of my scientific colleagues in expressing deep concern over RFK Jr.'s nomination for HHS Secretary. I urge you to vote against his confirmation.

The HHS Secretary must provide the President with expert advice on public health and welfare, grounded in rigorous, evidence-based analysis. RFK Jr.'s track record demonstrates a troubling disregard for scientific consensus and an unwillingness to evaluate data objectively.

For example... (insert your own, or use mine below)

...he claims a link between vaccines and autism, despite robust evidence to the contrary, including meta-analyses involving 1.2 million children (Taylor, Swerdfeger & Eslick, Vaccine, 2014). He also promotes the consumption of raw (unpasteurized) milk, a practice associated with significantly higher rates of illness—particularly among children—with no compelling scientific evidence of its benefits (FDA, numerous studies).

While RFK Jr. raises valid concerns about chronic disease in the United States, his disregard for evidence-based solutions undermines his ability to address these challenges effectively. His promotion of unfounded and harmful health claims poses a serious risk to the American public.

I hope you will weigh these considerations carefully during the hearings and confirmation process.

Thank you for your attention to this important matter.

Respectfully,

[your name]
