In sunny California, oranges go through many steps before get to our table. Exhausted migrant workers pick yummy oranges from the tall trees and place them in boxes. After that, workers drive the oranges to the processing plant. At the processing plant, first they wash the oranges. Next, they squeeze the juice from the oranges. Before they pour the juice into plastic bottles, they heat the juice to kill the germs inside the juice. Finally, distributors transport the bottled juice to the market or ship it to other countries so people can drink it. At the market, consumers buy orange juice to drink. Clearly, oranges go through a long process before we can enjoy the tasty juice.

Do you know how orange juice gets to your table? Then let me tell you how it happens. In sunny California, sweet oranges go through many steps before they become juice. Migrant workers pick the oranges and they put them into boxes. Then they take them to the processing plant to be turned into juice. At the processing plant, first they are washed and then they squeeze the juice out of the oranges. Next, the juice is heated. Last, the juice is poured into bottles. After that, the distributor transports the bottles of orange juice to the market in refrigerated trucks. Some of the juice is exported to other countries. At the market thirsty customers buy the juice and drink it. As you can see, oranges go through a long process before we can enjoy our tasty juice.

Did you know that delicious oranges go through many steps to get to our table? In the farm, before the oranges are placed in boxes, the farmers pick them from the trees. Then they take them to the processing plant to be turned into juice. At the processing plant, they wash the oranges and squeeze the juice. Right after the juice is heated, it is poured into plastic bottles. Finally, the distributor transports the goods to the market in refrigerated trucks. Once it gets to the market, the thirsty customers buy it and drink it. In conclusion, tasty oranges go through a long process before we can enjoy our cold orange juice.

Do you know how oranges make it to our table? It all begins in the farm where migrant workers pick oranges from the trees. Then they put them into boxes. After that, they send the oranges to the processing plant to juice them. Next, they heat the juice up and pour it into bottles. Immediately, they send the juice to the store. Then they put the juice for sell. Some people go to the store to buy juice. Clearly, oranges go through a long process before they make it to our kitchen.

Would you like to know how oranges get to your table? Sweet, delicious oranges go through many steps to get to our kitchen in hot, sunny California. Before the migrant workers put the oranges in the crate, they pick them from the trees in the farm. After they put the oranges in the crates, they drive them to the processing plant. At the processing plant, the oranges are washed and their juice is squeezed out. Next, they heat the orange juice and pour it into bottles. The distributor takes the orange juice in a refrigerated truck to the market. This is where thirsty customers buy the juice. Overall, oranges go through a long process before they become juice and make it to our homes.

Have you ever wondered how oranges become orange juice? Let me tell you. Tasty oranges in California go through many steps to get to our table. In fact, exhausted migrant workers place the oranges into crates after they gather them from the trees. From there, they take them to the processing plant so they can be washed and squeezed. After that, the juice is heated to make it safe to drink. Then it is poured into bottles. Finally, the juice bottles are transported to the market in refrigerated trucks. Once the juice arrives to the market, thirsty consumers buy it and drink it. Obviously, juicy oranges go through a long process before we can enjoy a delicious glass of orange juice.
