

DSLR FILM NOOB Podcast #72 Show notes:

Aputure has a new line of 1080p field monitors. The [VS-1 FineHD](#) and the [VS-2 FineHD](#) both sport a 1920x1080 7 inch screen and pretty much all of the features seen in the older VS-1, 2 and 3 models respectively. Pricing on the VS-1 appears to be “under \$200” and the VS-2 is expected to come in at under \$400.

That’s a pretty decent prices for that kind of resolution in a lower price field monitor. Both appear to be sporting IPS panels with [very similar specs](#).

[FS5 1.1 firmware, 4K inside and out!](#)

Can't use the built in screen while you do this, but it will do 4k internal and external. There has been some signs of blocking issues when the fs5 is in 4k. Doesn't look like that has been addressed in this firmware.

[A7R II and A7S II Firmware to cool things off!](#)

Have you seen a lot of overheating with the mark I? I have heard lots of people avoiding the Mark II because of this very issue.

[Ursa Mini 4.6K footage is out!](#)

I'm liking it, but when will the mini actually become available?

Flex lights are finally... back ordered

These got snatched up quick, seems like everyone has been talking about them this year.

Vimeo gets adaptive streaming and 4k?!

They've had 4k upload/download for almost a year, finally adding the playback? Took them long enough. Cough, youtube.

JVC College Sports Cameras

The GY-HM650SC has an MSRP of \$6,795 and will be available in January 2016. comes with ability to add 4g usb modems. And using UTC (time of day info in the metadata) making camera sync easy as well as sync biometric data collected on the players. JVC says “The new GY-HM200SP makes it easy for one person to shoot the game, insert graphics, record, and stream the production live – all directly from the camera. For schools with limited equipment and

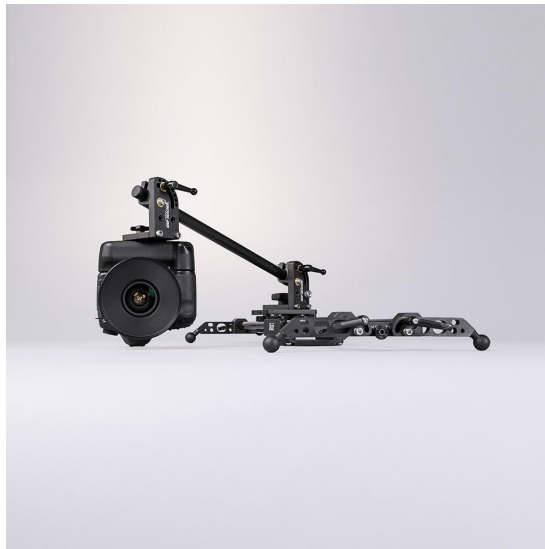

personnel resources, this new camera provides an innovative and affordable solution for producing professional-quality, single-camera sports coverage.”

FAA LAWS STRIKE DOWN THE WILD WEST OF DRONES, kinda

It's cheap, get registered, and don't be stupid with your drones. nuff said.

Innovation? or a product without a purpose?

\$170 seems a little expensive to me for what seems like a short boom arm with a few locks. I can't see myself using this a whole lot. I think for most sliders it would make the rig too unbalanced to be useful. But could give some that extra reach they need.
