

Data Paradise

(in the style of "Gangsta's Paradise" by Coolio)**

Hook:

Been spendin most our lives livin in a data paradise

Been spendin most my days learnin bout mean, median, mode and range

Verse 1:

As I walk through the door of my mathematics class

I take a look at the board, and I see a data graph

With all these figures and numbers to crunch that

Even this guy would think it's a bit too much

But I ain't never seen some data and not observe it

Quantitative measures of the center and spread

I'm talkin bout mean and median, and even mode and

Or even bout the range that this data shows

I really hate to trip but I gotta see

What the average is, we call it the mean

Add up all the numbers then divide it by how many

That's the waaay that we calculate the mean lil homie

Hook

Verse 2:

Let's find the median, kid, just think of this pic

So first I order all the data, yeah from small to big

Then I gotta mark em out, work my way in

The one that's in the very center is the median

Next I gotta find the mode, but it's so easy to try

It's the number that is in the data set the most times

Now the last thing to do is find the range of this data

See you can.t stop my brain just like Hannah Montana, fool

Take the smallest number and subtract it from the greatest

That's the range, super easy, what can I say?

I found the mean, median and the mode and range, so

I'm ballin like the legend Big O (Oscar Robertson)

Tell me why are we so blind to see

That Catwoman is this same laaaaady? (pic of Catwoman and Michelle Pfeiffer from Dangerous Minds)
