Abstract

Abstracts are written in English in unstructured form, with a concise and clear manner, thus allowing the reader to understand important aspects without having to read the entire script. The abstract contains no more than 250 words, covers the background, objectives, methods, results, and conclusions. There is no suggestion in abstract, use Times New Roman 10pt.

Keywords: consists of 3-5 words that can help the preparation of the index, separated by semicolon (;), Times New Roman 10pt

¹ Corresponding author, e-mail:@gmail.com

The following is a template for a research article. Case report script templates and literature reviews can be adjusted according to guidelines.

INTRODUCTION

Introduction includes background, a little literature review, research problem formulation and research objectives. Introduction contains justification of the importance of the study conducted. Novelty generated from this study compared the results of previous studies or existing knowledge needs to be clearly displayed. Complete it with main reference used.

MATERIAL AND METHODE

Material and method contains the design, the size, criteria and method of sampling, instruments used, and procedures collecting, processing, and analysis of the data. When using a questionnaire as instrument, explain the contents briefly and to measure which variables. Validity and reliability of instruments should also be explained. In the experimental or intervention studies need to be explained interventional procedure or treatment is given. In this section it should explain 2 research ethics approval was obtained and the protection of the rights of the respondents imposed. Analysis of data using computer programs needs not be written details of the software if not original.

Place/location of the study is only mentioned when it comes to study. For the qualitative study, in this section needs to explain how the study maintain the validity (trustworthiness) data obtained. The methods section written brief in two to three paragraphs.

RESULT

The findings are sorted by the objectives of the study or the research hypothesis. The results do not display the same data in two forms namely tables/images /graphics and narration. No citations in the results section. The average value (mean) must be accompanied by a

standard deviation. Writing images and tables using the following conditions.

Images are placed symmetrically in columns within a single space of a paragraph. The image is placed in the position of the top or bottom of each page and do not flanked by sentence. If the size of the image passes through the column width then the image can be placed with a single column format. Images are placed immediately after its description in the manuscripts. Pictures are numbered and sorted by Arabic numerals. Captions placed below the image and within one single space of the image. Captions are written by using 10pt font size, bold, capital letters at the beginning of the word, and placed as in the example.

Images which have been published by other authors should obtain written permission from the author and publisher. Include a printed image with good quality in a full page or scanned with a good resolution in the format {file name}.jpeg or {file name}. tiff. When the images are in the photograph format, include the original photographs. The font used in the picture or graphic should be commonly owned by each word processor and the operating system such as Symbol, Times New Roman with size not less than 10 pt. Image files which are from applications such as Corel Draw, Adobe Illustrator and Aldus Freehand can give better results and can be reduced without changing the resolution.

Here (Fig. 1) is an example of an image included in the manuscript.

Table should not use a column line. Table is written with Times New Roman size 10 pt and placed within a single space below the title table. Numbering tables are using Arabic numerals. The distance between table and the paragraph is a single space. The table is put immediately after its appointment in the manuscript. The table framework is using lines size 1 pt. If

the table has many columns, it can use one column format at half or full page. If the title in each table column is long and complex, the columns are numbered and its description given at the bottom of the table. The table is placed in the highest or the very bottom of each page and do not flanked by sentence. Avoid interrupted the table by page.

For the qualitative study, the findings commonly are written in the form of participants quotes. Table format is rarely used except to describe the

characteristics of the participants, or recapitulation of the themes or categories. If the quote is not more than 40 words, then use quotation marks (") at the beginning and at the end of a sentence and include participants/ informants which give statements without the need to create separate paragraphs. Ellipsis (...) is only used to change a word that is not shown, instead of a stop sign/pause. See the following example.

Table 1. Summary of data obtained from least-squares fit of Eq. (20) to km vs Ei plots for three selected systems

Redox moiety	Diluent	Method	k_0 (s ⁻¹)	$E_i^{0'}$ V vs SSCE	γ	fwhm (V) ^a
R1	D1	ILIT	3.4×10^4	0.495	95	-
		CV	3.3×10^4	0.474	100	0.103
R2	D2	ILIT	6.0×10^4	0.340	24	-
		CV	6.1×10^4	0.346	24	0.112
R3	D3	ILIT	3.2×10^6	0.328	12.0	-
		CV	3.2×10^6	0.324	12.1	0.121

^aFull-width-half-maximum of the cyclic voltammetric peak.

^bThis is the format for table footnotes. Very often you will already have prepared (parts of) your text. If you load that text as a separate document, you can easily insert it into a document based on this template by cutting and pasting between the two documents.

Due to the ongoing process, the women experiencing moderate to severe pain in the knees, ankles, legs, back, shoulders, elbows, and/or their fingers, and they are struggling to eliminate the pain. To alleviate pain, they look for the cause of the pain. One participant stated that, "... I decided to visit a doctor to determine the cause of the pain is. Now I'm taking medication from the doctor in an attempt to reduce this pain" (participant 3).

Here is an excerpt example of using block quotations if the sentences are 40 or more. Use indentation 0.3"

As discussed earlier, once the participants had recovered from the shock of the diagnosis of the disease, all participants decided to fight for their life. For most of them, the motivation for life is a function of their love for their children; namely child welfare, which being characteristic the pressure in their world. Here is an example of an expression of one of the participants:

I tried to suicide, but when I think of my children, I cannot do that [crying]. I thought, if I die, no one will take care of my children. Therefore, I decided to fight for my life and my future. They (children) were the hope of my life (participant 2).

DISCUSSION

Describe the discussion by comparing the data obtained at this time with the data obtained in the previous study. No more statistical or other mathematical symbols in the discussion. The discussion is directed at an answer to the research hypothesis. Emphasis was placed on similarities, differences, or the uniqueness of the findings obtained. It is need to discuss the reason of the findings. The implications of the results are written to clarify the impact of the results the advancement of science are studied. The discussion ended with the various limitations of the study

CONCLUSION

Conclusions section is written in narrative form. The conclusion is the answer of the hypothesis that leads to the main purpose of the study.

ACKNOWLEDGMENT

Acknowledgments should be inserted at the end of the paper, before the references, not as a footnote to the title. Acknowledgments should be limited to the appropriate professionals who contributed to the paper, including technical help and financial or material support, as well as any general support by a department chairperson.

REFERENCE

The author-year notation system is required and completed. All references mentioned should be written down in reference using Vancouver style and arranged from A to Z. Articles have minimal 10 recent references (last 10 year for book or last 5 year for article, journal or others references) and 80% is journal. The number of references is at least 20 references. References from journal publication should be provided by DOI. All cited references must be mention in in-text citation. It's very recommended to use Mendeley or Zotero. If you are zotero user, please download the reference style here

<https://www.zotero.org/styles?q=vancouver>
