

Agenda Backlog

- Update on release 0.90
- Enhance Patient Search by attributes (v 0.91)
- ~~Allow pages to have extensions—example: a collapsible pane on pages where extensions can be plugged in.~~
- Upgrade to CentOS 7
- ~~Migration of the CD platform out of AWS~~
- Align the UI experience of recording conditions with the one of recording diagnoses

Participants

- Darius
- Arjun
- Dimitri
- SudipRaj
- Bindu

Notes

Enumerate To Dos from last call, where we discussed *Synchronizing all types of orders from EMR to ERP*

- UI for setting concept attributes (or do we ask people to use SQL for this?). Should be a separate ticket.
- Support for setting these concept attributes during the CSV upload. (separate ticket?)
- Main ticket:
 - Synchronizing all sellable concepts to ERP as reference data (done via reader on ERP-connect side).
 - Open question: do we need a *Category* for these orderables/sellables?
 - Update the code that reads the encounter feed (and its orders) as necessary
 - (and presumably more)

Arjun to create a JIRA ticket for this, and tentatively label it with the 0.91 fix version.

0.90 Release

0.90 was technically released, but not announced, because Amman team found a showstopper bug during regression testing.

Now facing a Python upgrade issue. Shruthi and Bindu have been pairing on this, and will be doing a patch release tomorrow.

With this patch release, we'll announce the release.

For the 0.91 release we should make a small change to the release process so that we don't have a private release only accessible to a ThoughtWorks client who knows.

Status update on new dev team. and 0.91 work?

1. Dev team needs to put more concrete updates on JIRA tickets
2. Monthly(?) retrospectives of how the team is doing
3. Showcases as appropriate on ongoing work

Align the UI experience of recording conditions with the one of recording diagnoses

Mekom has gotten specific feedback that users in Cambodia are confused by the UI flow of conditions, because for these you have to click Add which differs from Diagnoses and everything else.

<https://talk.openmrs.org/t/feature-request-simplify-diagnosis-tab/14253>

Specific proposal:

- Can we get rid of the *Add* button for conditions?
- Or can we save any data that you've entered in the condition fields when you click *Save* (even if you haven't clicked *Add*).
- Or at least give a warning if you click *Save* after entering data in the condition fields without clicking *Add*.

Next steps:

1. Dimitri to do a followup Talk post giving a screenshot and proposing this quick fix
2. Arjun to reach out offline to Akhil and Arvind about what the original design philosophy was
3. Dimitri to Invite Possible (sanjayap on Talk) to this talk thread

Upgrade to CentOS 7

Bindu to create a JIRA card

Bindu to share her current findings via Talk and/or JIRA card
