[School name] | [Teacher name] | [Class or grade]

Dear families,

Our class will use a Nutraponics hydroponic growing system during [term or dates]. Hydroponics grows plants with water and dissolved mineral nutrients instead of soil. The system will give students a living example to observe while they learn about plants, measurement, and scientific investigation.

Students will record observations, measure plant growth, organize data, and explain their findings using evidence. Activities will be selected for our grade level. Our planned crops are [crops], and our main investigation is [brief description].

Students will follow classroom instructions and work within the access boundaries set by their teacher. Adults will handle concentrated nutrients, pH adjusters, electrical equipment, and system maintenance. No home growing equipment is needed to participate.

Any harvesting or tasting will follow school food, hygiene, and allergy procedures. We will seek separate permission where school policy requires it. Please contact [teacher or school contact] about participation needs or questions before [date].

We will share our learning through [student notebooks, a classroom display, or an approved school update]. Any photographs or student work shared outside the classroom will follow school permissions and privacy procedures.

Thank you for supporting our classroom learning.
