To guide your reading and discussion, reflect on these questions. On the exercise on page 2, use this space to explain and sort out your reasoning.

Step 1
Have a partner read through once. Highlight anything that needs more clarification.

Was anything you highlighted explained later in the text?

Step 2
Read through the texts a second time. Underline anything that needs further discussion.
Was there anything you highlighted and underlined?

What looks familiar from these texts (from our intro yesterday or previously in the course)?

What needs more explanation?

What is completely new?

Do the texts give any clues for the usefulness of binomial distribution probabilities?

Step 3
Define any new words and connect any important formulas to their context in the reading by writing them here and drawing an arrow.
