

Now after Bardock survives the destruction of Planet Vegeta/1st Form Frieza's attack. He gets a Zenkai boost that makes him considerably comparable to 1st Form Frieza in the episode of Bardock. Completely ignoring the fact that Bardock tanked an attack that shot him through a higher dimensional time axis to another time period. We can now safely gauge Bardock's power level to roughly 500,000. Meaning he would scale above the likes of the entire Ginyu Force, and 1st Form Frieza. And since they wanted to bring up Mira and Towa, Garlic Jr. is now not off the table.

Starting with the Ginyu Force. Goku, before his power level even broke 90,000, already had the power to spread his ki and brighten up planets, stars and even the nebulae in the background <https://www.youtube.com/watch?v=r2PXXKMBm8k> all in the span of 5 seconds

This is impressive because that nebulae hold infinite stars in Dragon Ball

宇宙

The Universe

The endless, expansive space wrapped around every celestial body that exists in the Living World. Along with the "Demon Realm," it is a single, large world in the Living World. In the world of Dragon Ball, the universe is located beneath the World Beyond, and it is hermetically sealed by a barrier that is engraved with a strange design. Within the universe, there are "nebulae" composed of innumerable stars, and there are "galaxies" composed of innumerable nebulae. There is a ruling Kami for each galaxy. Earth resides in the Solar System, a galactic nebula on the outskirts of the North Galaxy.

making this a high uni and infinite speed feat. but we'll ignore that for now

Because the fact that Goku's ki spread to other solar systems in seconds this makes Goku's ki be able to cross several light years 9.461×10^{12} times 12 (number of lightyears for a lowball of 3 solar systems away)

$1.13532 \times 10^{14} / 299792458$ m/s or 378701.989 times the speed of light which is a grievous lowball from their own speed feat given from Goku dodging meteors.

For a highball I can roughly say 20 solar systems were affected by this. Which means

$7.5688e+14/299792458 = 2,524,679.92$ times the speed of light

The power of this feat is different as goku is not only making these stars and planet s brighter. But the process to do this means that he would be replicating and enhancing the nuclear fusion process inside of a star's core.

Considering the luminosity formula of distance from planet viewpoint times brightness in watts per square meters times 4π .

Basiing this off of our own sun 3.8×10^{26} watts

Distance from namek at the time, reaches as far back as 20 solar systems meaning 80 light years away or $7.5688e+17$ meters

$(7.5688e+17)$ times (3.8×10^{26}) times 4π

$2.876144e+44$ times 4π

$1.1504576e+45$ times $\pi = 3.6142691e+45$ times 20 for doing it to that many stars gives us $7.2285383e+46$ joules per second solar system

Goku would not only have to match this power but massively exceed it just to perform what he did. And bardock scales over that via having a higher power level.

Next is for the planet vegeta bust done by 1st form freeza.

To find this, simple gbe calc

Gm^2/r

The gravitational constant is 9.8

The circumference is 4billion km, and as the earth is massively bigger while the humans gravity being normally walked in. The gravity must still be 9.8. Which means the true mass must be massively bigger than usual.

The radius of earth is 636619772.37

Which means the mass must be 59,722,000,000,000,000,000,000,000,000 kg

$5.9722e34$ kg

Making the gbe of just dragon balls earth be 9.8 times $(5.9722e34)^2/636619772.37$

$3.4953829e+70/636619772.37=5.491 \times 10^{61}$
Multi solar system level for destroying earth.

As for planet vegeta which isn't considered a small planet, and has 10 times the surface gravity as earth.

Meaning a gravity constant of 98

And assuming double the radius for vegeta 1273239544.74

The mass must be at least $2.3888799999999998e+30$ kg

98 times $(2.3888799999999998e+30)^2/1273239544.74=4.482 \times 10^{53}$ solar system level.

This means that base bardocks power must be lowballing 5.491×10^{61} for scaling over king piccolo who can destroy earth. With his power level of 260, And king vegeta casually being stronger than that with a wave of his hand, times 38 to match the power level $2.08658e+63$, then factoring effort would make Bardock at least 100 times stronger meaning $2.08658e+65$ in base before zenkai. And then 50 times stronger from bardocks zenkai that puts him from 10000 to 500000. Making base bardock's power at $1.04329e+67$ galaxy level with great ape Bardock at $1.04329e+68$ galaxy level and at ssj bardock at $5.21645e+68$ galaxy level. And at this point bardocks power level is 25 million in ssj.

Keep in mind that in freezas 100% final form his power level is 120 million

https://cdn.discordapp.com/attachments/1237602485385039953/1294040549011226666/IMG_2857.png?ex=6710d0ec&is=670f7f6c&hm=8544e181fe25d96be8aa37f05cc28d0d21c047787cd2f405d85be1c33288c873&

A simple division puts final form freeza at a power level of 1.2 million,

And because that a simple power level of 1000000 is enough to destroy the universe(as it's stated that freezas power is doubled when he goes to his 2nd form)

https://i.imgur.com/azaMHbN_d.webp?maxwidth=1520&fidelity=grand

Which means that great ape Bardock at a power level at 5 million, is 5 times stronger than uni+ making him low multiversal at the very least.
