

GemCoat Premier Bunnies are the first species made available to the public from the GemCoat experiment. Because of this they are also known as ALPHA BUNS!

Drive from a mix breed bunny stock the average build can resemble any bunny breed.

There is an official base located here  Gem coat bunny base.psd

It is in PSD format and gives 2-3 variations on each gene and is considered a good example of avridges.

As always you do not need to use this base or stick to the avridges.

Litter Size Chart

1-2 is three babies

3-4 is four babies

5 is five babies

6 is six babies

Physical traits

Ears:

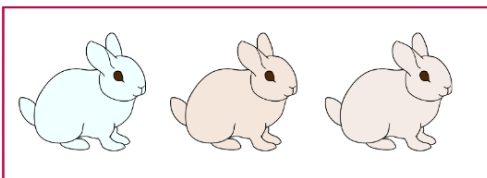

Upright

Lop

Fire

Pumpkin

Flower

Royal

Sunshine

Dilutions

Dilutions cover 30% to 100% of the base coat in a color that is at 20% to 60% opacity. May be in any soft edged pattern. Each Bunny may only have one dilution.

Ice - A dilution of white

Fog/Roan - A dilution of gray

Night - A dilution of black

Fade - a collection of dilutions in a specific base color. For example Royal Fade would be a dilution of purple

Markings (For a visual guide please see the base. A chart is in progress)

Dutch - a white marking following the classic Dutch Hair pattern

Inverse dutch - a white marking following the classic Dutch Hair Pattern but instead it is inverted so the coat shows where the dutch pattern is and the rest is white.

Piebald - mostly white with large patches of base color coming threw

Snow spots - white marking small dots of white anywhere

Snow cap - soft white splash on back and but

Points - a darkening of the ears, tail and legs

White socks - white markings that start at the toes and can go up to the shoulder/hip

Black socks - can be black or a darkening version of white socks

appaloosa - covers the whole body in white with circular patches of base color

Brindle - thin stripes of white dilution

Black brindle - thin stripes of black dilution

Unders - a lighting of color on the belly

Shadow - unders but a darkaning
