## **Top 4 Blockchain Press Release Distribution Platforms That Actually Work**

The blockchain space is as crowded as ever. According to CoinMarketCap, there are more than 16 million coins being tracked, with tens of thousands being created each and every day.

If you've got an announcement to make or some news to share, that's a lot of voices that you need to be heard over. You could spend days writing the perfect press release about your DeFi protocol or NFT marketplace, send it through a generic wire service, and get nothing back for all your hard work. At best, you get picked up by a few random business blogs that have zero readers interested in blockchain technology.

The solution isn't to give up on press releases entirely. It's using platforms that actually know and understand the blockchain space and can get your story in front of people who care about what you're building. With this in mind, let's take a look at some of the best blockchain press release distribution platforms that consistently deliver real results.

#### Top 4 Blockchain Press Release Distribution Platforms That Actually Work.....1

Chainwire: The Crypto-Native Powerhouse.....	2

COINTELEGRAPH The future of money DAILYCOIN ZyCrypto Decrypt AMBCRYPTO The Defiant CRYPTOSLATE Coinspeaker CONJOURNAL CryptoPotato THE DAILY HODL coinCodex CoinMarketCap CRYPTO BRIEFING be[3] crypto

[Chainwire](#) is best described as being hyper-specialized for the blockchain space, built on a publishing ecosystem that has been carefully developed over more than a decade. Unlike the more traditional platforms where you may have to hope that your crypto press release might get picked up, Chainwire 100% guarantees it will through direct integrations with many of the major publications.

The platform connects directly with top-notch blockchain and cryptocurrency news websites, including Cointelegraph, The Block, Decrypt, and more general publications such as Business Insider and Benzinga. When you submit a press release, it gets published automatically across their partner sites rather than sitting in overflowing editor inboxes. Their editorial team reviews content before distribution and can provide feedback and SEO adjustments to maximize impact.

Their analytics dashboard shows you exactly where stories appeared, gives you access to engagement metrics, and details publication performance in near real-time. If you're thinking about sending out press releases as part of a global campaign, they also translate releases and distribute them in multiple languages.

- Guaranteed coverage across major crypto publications
- Same-day distribution
- Delivers maximum visibility in the crypto community
- Homepage placements

## Coinzilla: The Marketing Ecosystem Player

Rather than a one-size-fits-all approach, [Coinzilla](#), developed by Sevio, offers a marketplace where you can handpick exactly which websites will run your announcement.

The process is straightforward. You simply create your order, select from categorized publisher options, and pay the fee. You can also filter out publications by audience type, geographic location, and content focus.

If you don't have the time or capacity to write the release yourself, the Coinzilla team can handle the content creation, too, if needed, but you will still need to give your approval before anything gets published. This transparency means you get to see exactly which sites will run your story, so you can see whether or not running a press release would be worth your time (and fit your budget).

Security features protect both advertisers and publishers, offering full refunds if a publisher fails to deliver as promised. The marketplace approach typically costs less than premium services since you only pay for relevant placements.

- Targeted campaigns with specific audience requirements
- Offers control over publication selection
- For budget-conscious projects looking for cost-effective distribution

## Cointraffic: The Performance-Focused Veteran

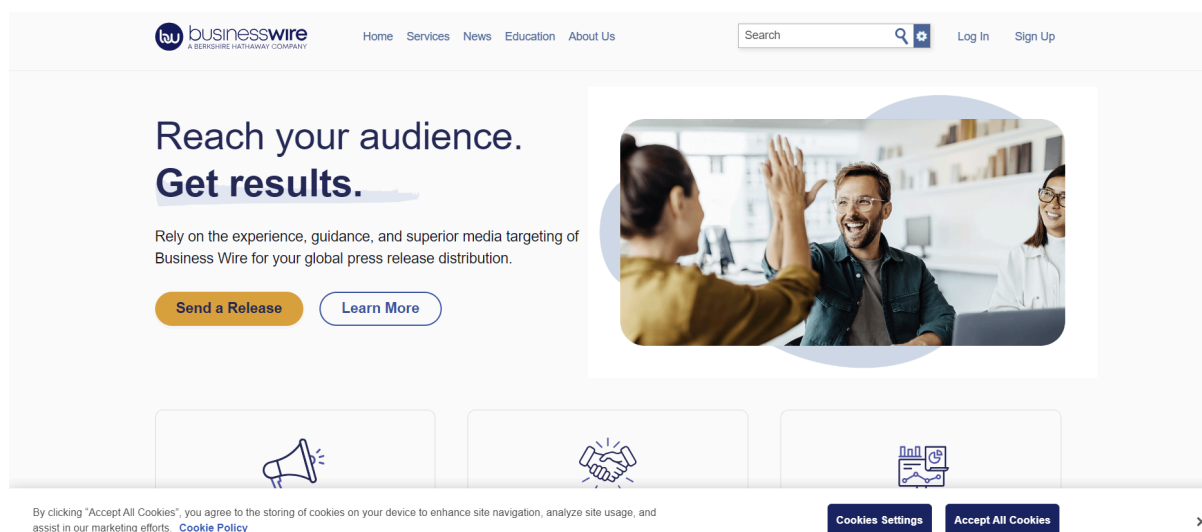

[Cointraffic](#) has positioned itself as one of the leading crypto and Bitcoin advertising networks around. They've built their reputation on delivering clean, high-quality ads that don't impact website loading speeds or compromise the user experience, with fast payouts and professional support that clients consistently praise.

Their press release distribution service helps companies send their announcements to over 150 reputable crypto websites through a "smart PR constructor." This system automatically ranks cryptocurrency websites based on traffic, press release visibility, and performance metrics, ensuring that your announcement is sent only to the top-performing publications.

Within the service, you can also gain access to professional copywriting expertise, with first drafts ready within 24 hours and complete distribution finished within 3-5 business days. You also gain access to comprehensive reporting, including publication links, media reach numbers, and detailed analytics, allowing you to track the performance of your release.

- Smart PR constructor selects top-performing crypto websites automatically
- 24-hour first draft with 3-5 day complete distribution
- Translation into 10 languages, including Chinese, German, and Russian

# BusinessWire: The Mainstream Bridge Builder

[BusinessWire](#) is a name that most people are familiar with. It brings 60 years of credibility under the Berkshire Hathaway umbrella, distributing content to 100,000+ media outlets across 162 countries. And while you may be wondering what they are doing on this blockchain-based list, it's because they have added cryptocurrency to their targeted distribution circuits, giving their customers direct access to crypto reporters while maintaining connections to mainstream financial media.

This offers a distinctive value proposition for blockchain companies seeking to bridge crypto-native coverage with traditional business journalism. For institutional-focused announcements, regulatory news, or partnerships with traditional companies, BusinessWire is likely to be one of your best options, as it reaches Wall Street Journal reporters, Bloomberg journalists, and mainstream financial media that crypto-specific platforms can't access.

While it does come at a premium price and may not have the hyper-specialization of some more crypto-native platforms, BusinessWire packs a mighty punch for companies that need coverage across both the crypto and traditional worlds.

- Great for announcing major funding rounds and regulatory announcements
- Providing boost to mainstream credibility
- Massive reach of publications

## Choosing Your Platform

The blockchain space has matured to the point where generic press release distribution no longer works in the same way it used to. Crypto announcements often get lost competing with other verticals in the tech sector. The blockchain space is specialized and nuanced, which means it requires a particular approach.

These four platforms understand the crypto space, speak the language, and have built the relationships needed to get stories in front of engaged audiences. Whether you need guaranteed coverage, targeted control, performance focus, or mainstream credibility, there's an option that delivers real results beyond empty promises.

With that said, not all of these options will be right for you. Consider your needs, your audience, and your budget, and do some research to determine which platform is best suited to deliver results for your brand.
