

Timothy's wild adventures

Timothy wonders, then says to Robert "Hey Robert, I wonder what is there in space that us humans don't know" Robert says "I'm not sure but I don't want to find out." Timothy replies "I want to go and check will you come with me." But Robert refuses. Timothy wants to do what he desires and this idea troubles him day and night. So he works more than before to get a raise so he can fund his idea to make a rocket that can go to space and to arrive very far in space. He finally after 2 years gets a raise to 3 million dollars per year and he can finally fund his idea. He also creates multiple successful businesses to fund his idea. So he puts the body of the rocket, and puts everything necessary to do it, but he can't fly it because you need a license to fly it, so he goes and applies but he fails, then he tries again and fails again. So he goes to Robert, and he is laughing at Timothy because he paid the license industry to fail Timothy so that his mission doesn't get completed. So Timothy spent so much time and money on the space shuttle but he can't even use it so he goes again to apply and this time Roberts didn't know he applied so he got accepted and can ride the spaceship. So he gets everything ready and buys fuel so that the spaceship can ride into space and he can fulfill his dream of finding something no one has ever found in the history of the entire world.

So Timothy goes to his own spaceship and finally can go to space but as he launches the spaceship seems to work fine until "BAM" the rocket plummets toward the ground and explodes but Timothy was ready for this he went to his safety compartment just in time and survived the fall with a few broken bones, after about 6 months he decides that this injury will not stop him and he still wants to do this and decides to build another spaceship this time he spent a lot more money and builds it in 1 year. He decides to give it another shot, but this time it works and he successfully is in space and does what he truly desires. He is in space all by himself in the middle of nowhere and at any moment he can get lost and never be seen again. So he tries to go to one of the moons of Saturn and try to see what he can find on them. So he goes further and further from earth until he can barely see it. Then he reaches Saturn and tries to not land on it but to go to one of its moons to see what he can find on them, so he goes to the first one and digs and digs with his space suit and extremely nice equipment, as well as x-rays. But he finds nothing. Then he goes to another moon, and still finds nothing. And then decides to go to the third, fourth, fifth, sixth moon. He went to all 83 moons of Saturn and found absolutely nothing and was defeated. So he heads back to earth just before his fuel runs out, and he barely makes it to earth having to parachute out of the spaceship just before it explodes. He also tells everyone but no one believes that he went to all 83 moons of Saturn.

Timothy was very devastated at his trip as he did not seem to find anything that was of value. So this time he decided to go to all of the 80 moons of Jupiter so again he built another spaceship and decided to go to the 80 moons of Jupiter but in the middle of the way in space his ship gave out and he had to jump out and landed on a moving asteroid that hit him just after he jumped. He landed on it and luckily from his protective gear he did not break any bones. But

he was stranded on an asteroid and decided wow I should try and dig into this asteroid and he found some clear gold, but there was no way he could get back to earth as he was stranded so he decided to jump off the asteroid and make it to earth in the speed and then get pulled by earth's gravity, so he decided to try it and he stayed in space for 25 days until earth's atmosphere sucked him in and he pulled his parachute and survived, he did lose a lot of pounds because he did not eat for the 25 days that he was in space but he did bring water so that was very smart of him. After that experience he still had the gold and decided to check how much it was worth and it was surprisingly worth 100m dollars and he sold the diamond and decided to build the third spaceship and go to Jupiter's moons and try to find something in them. He spent every last dollar of that 100m to his spaceship and technology so it doesn't break like it did.

Then Timothy decided to not give up but to try and get rid of Robert as he thought that Robert is behind his crashes and he decided to go to him and consult him as to why he did why he did, and Robert only had 1 word for him "physico" and that's what Robert thought of Timothy and he tried to stop Timothy before he gets himself injured because of his stupidity. So Robert tried all in his power to stop him from getting himself killed so he made a defect with all of the spaceships, but he didn't want Timothy to die so he put parachutes and gravitation metal so he gets pulled to earth if something goes wrong. So in a way they were actually enemies but friends at the same time. But Timothy still doesn't want Robert to stop him so he tries again and this time he goes to Mars and goes with x-ray machines and tries to find what is in the core of Mars. So he goes there this time with only Robots because he doesn't want something crazy to happen again. And he finds loads and loads of gold 5 km under Mars surface. So he leaves the Robot in space and tries to find some more things But doesn't find anything with his machines. Now he is intrigued, how did humans find nothing in this universe of value. So he decides to do a full circle around Mars to see what else he finds there, and he finds the other Robot by NASA and then leaves to not get spotted by it, and then returns it to earth as he brings a bit of the sample gold.

Then he decides to make another spaceship but this time to not tell Robert anything so that he doesn't ruin his plan. So Timothy went to space and went to Mars, to try and dig up and bring as much gold as he possibly could back to earth. As he arrived on Mars he landed, put his protective gear on and went outside. He also brought his drill so he can dig. So that's how he started an excavation center on Mars by himself without anybody knowing. Days turned into weeks, weeks turned into months, and he was only halfway there. But he never gave up and after 1 year of straight digging he hit shiny metal which was loads of gold and diamonds. So he decides to mine a decent amount of it and now he has access so all he has to do is go back and forth and sell as much diamonds as he can and he can find more treasure. So he gets to earth and sells as many diamonds as he could get and goes back to get more, and did this 3 times. After this he had about 100 billion dollars. He had enough money to do more so he tried to tell everyone that there are diamonds on Mars but no one believed him. But then Robert heard about this rumor, and he knew that what Timothy said he never lied so he wanted to see this for himself.

So Robert wanted to see what Timothy was talking about so he decided to build a spaceship just like his and go to mars and try to find his excavation spot and get some diamonds so he can become rich as well. So he decided to go and he arrived with absolutely no problem at all. But it took him quite a while to find the mine where Timothy was mining. But finally after a long month he found the excavation spot and decided to go into it. The more he went in the hotter it got as he went closer and closer to the core so he decided to call it a day and get out and send only a robot, but he didn't have a Robot that could stand such heat, and decided to go back to earth and come back when he has that technology. He had a better idea and decided to steal Timothy's robot that he worked with. The next day he got the robot and went as soon as possible to mars, to see if there actually were diamonds. His robot went deeper till it hit this shiny metal. But Robert was smart. He attached a diamond detector to his robot, and as soon as his robot said it was real diamonds he was so excited that he was going to be rich. So he started digging, and digging till he got 1 tone of diamonds, to bring to earth and sell. The next day he went and sold only half of the diamonds and got so much money that he was one of the richest people in history, and he only sold half. So he decided to sell 90 percent and out of the rest to make jewelry for his family.

As soon as Timothy noticed that his robot was gone he was really mad and went directly to Robert and asked him where his robot was, but Robert did not want to give his robot back. So Timothy decided to go the next day and steal it back, but as soon as he arrived. Robert was right in front of the Robot like he knew that Timothy wanted to get it back. So Timothy went at night and successfully stole the Robot from Robert.

Timothy then went and built a bunker to hide all of his secret gadgets from Robert. But Timothy didn't really care about what values he finds in space. He cared about what life he can find out there. So he tried to make some spaceship that could travel faster than light so he can cover a long distance in a short amount of time and find something out there. So he spends about one fifth of his money trying to do research, consult scientists, and they all say the same thing "it is impossible." But He never gives up and decides to study science and to build it himself. After a lot of research and years of studying he finally learns everything he needs to learn. So he spends a lot of time trying to figure out materials to build it and after a lot of hours he builds a machine that can go 1000,000 per hour which is twice the speed of light. So he decides to try to get out of the milky way because he thinks that there are not many things in the milky way. So after a few years of still traveling he gets to another galaxy and enters it and finds the closest planet there that looks like it could have some potential for exploring.

As he enters the galaxy he notices the closest planet and goes to fly towards it. As he enters the planet's atmosphere he notices that there is oxygen and that he can breathe very well on the earth. He has an oxygen meter, and he sees that there is double the oxygen that there is on the earth. So he decides to get a sample of the oxygen and show it to scientists when he gets back to earth to see if there are other chemicals and materials in it. He also decides to get his x-ray gear and to see if there is anything underground that is interesting. As he was scouting the planet he doesn't seem to find anything except this one particle in the atmosphere that he never saw before. So he decides to go back to earth and find out what this particle is that he is

inhaling. It takes him a few years to get back but he arrives safely and races to go to a scientist to go and find this new particle. As the scientist is looking at the particle he is surprised as he has never seen this thing before. It's a new air particle, but they don't know if it's healthy or not. But they did see a difference in Timothy's health. He seemed to be stronger, lift heavier, and he grew in muscle and seemed to lose fat by only staying 3 days there. So the scientists are trying to multiply the particle and they seem to find that multiplying it is very easy. So they release the particle in the earth's atmosphere. After just a few weeks the particle gets all around the earth and every person becomes fitter and stronger. Then Timothy, at his success that he found a way to make the earth more healthy becomes more intrigued and wants to find more about what is there in the universe and decides to go there again.

As he enters the spaceship and tries to go again, but this time in an opposite direction to see what he can find in another galaxy. As he is halfway to another planet in another solar system he runs into a problem. His bunker gets blown into space and all of his food is in there so he is in space pretty far away from earth with no food. But he decides to still go, after 30 days with no food and very little water he arrives on this amazing planet with food that looks edible, but he doesn't know what it is. He decides to eat it as he has nothing else to eat. And as soon as he took a bite he felt a rush of energy go through him and he had more energy than he had ever in his life. But he doesn't seem to find any other intelligence on this planet. So he decides to pull his x-ray gear to see if there is anything underground but he doesn't seem to find anything. So he takes the food so it keeps him healthy and goes back to earth living off these interesting fruits. When he arrives at earth he asks the scientist what the fruits that he ate were, but the scientist didn't really know because he had never seen it before. As they put the food under the microscope he seemed to find that there is a lot more concentrated energy, so that's why Timothy felt really energetic when he ate the fruit. The scientists saw this and decided to plant the fruit in a room filled with only pure oxygen as the air on that planet was made of very close to pure oxygen. So the scientists tried to multiply the fruit so that they could try it and see what it does to their body.

But Robert hears this and doesn't like the idea of doing this so he tries to stop the scientists by paying them money to stop the investigation. The scientists are intrigued at the fruit so they don't listen to him and keep investigating. But Timothy heard about this and decided to put all of the scientists' lab in his bunker because he knew that Robert would try to stop them no matter what. Soon enough Robert went and bought a bomb and tried to bomb the scientists headquarters. But no one was in there so no one was hurt. So they kept working in the plants and finally were able to reproduce them so they could consume them and see what it would do.

Timothy wanted to find more, but instead of going to his spaceship and going far out. He wanted to send a robot just because of the safety and the robot could travel faster, have a built in telescope and communicate in case he met anything. So he made the robot and sent it to space checking with the telescope where things are and where he should go with it. He decided to go to the other side of the sun so he could get to the center of the Milky way galaxy so he could see what things were there. So the robot set his journey to go to the center of our home galaxy.

As the robot goes on his journey he finds an awful amount of asteroids there that are all very close to hitting the robot, but the robot has very good artificial intelligence and can dodge a lot of the objects flying towards it at very fast speed. Timothy sees everything and he feels like he is a video game about space just like when he was small. But he remembers that if the robot crashes it is a very big deal and he will lose millions of dollars. So he tries to maneuver the robot to not fail and tries to go further and further out in the open toward that mysterious planet that he can see out in the distance. After just a few months the robot is very close to entering the atmosphere of the mysterious earth and as it enters it immediately gets crushed as the air pressure is so high that even the very hard metal gets destroyed. But he can still see with the camera as it is not yet crushed and what he sees is incredible. He sees these big creatures with 4 limbs that walk all around, they also look huge so they can stand the pressure. So before his camera dies he takes a few screenshots of the animals there and loses hope of ever going there in person.

But then, an idea flies through his head and tells him to try and go by himself in that location and perhaps talk a bit with the very big animals. But the air pressure is very high so he needs to make a suit that can hold it. So he started experimenting, and experimenting, till he got a suit that could withstand the force of 500 times the air pressure of earth. So he took his spaceship and went to see what he could find there. It did not take him long at all to arrive at his destination. As he was entering the atmosphere of the planet he was put on his suit and jumped out. As he landed the very huge creatures went towards him and started to talk with him in an unknown language, but Timothy didn't understand so he spoke in english, but it turns out the "aliens" have been studying us for centuries and they know the english language. So they speak English with Timothy. Timothy, surprised at this, wants to maybe help the aliens to go back to earth to him and they all agree to do this plan. So they all go on his space ship and head back to earth. The aliens land on earth and because of the air pressure difference they can jump very high and run very fast, but Timothy doesn't want to tell anyone of his discovery.

So he tries to hide all of the extraterrestrials in his secret bunker, but the scientists want to know what he found and what he was hiding as he seemed to be hiding something. The scientists knew where the bunker was so they all decided to go there. As soon as they entered they saw these creatures that talked in english with them and they said all at the same time "I knew it". Amazed at Timothy's discovery they wanted to see what these aliens are made of. So they asked them to see if they could put them under a microscope to see. Surprisingly they said "yes" and let the scientists take one of them for testing. But the aliens didn't like earth's microscopes and brought their own that are way stronger than earth's. So he went under the microscope and the scientists saw that they were made of very strong metal that we have never seen before. The aliens also showed the scientists how to make specific gadgets that have amazing intelligence. Then Timothy came back to the lab and was very surprised at what he saw. He saw that the scientists and aliens were making spaceships and airplanes that could travel extremely fast. Now as he saw this he told the aliens to run when they heard a man by the name of Robert as he would try to tell everyone and kill the aliens. The aliens and scientists all agreed to Timothy's words. They spent a few weeks building new structures and new

technology for humans till the aliens said that they had to go after four weeks because they told their friends if they don't come in four weeks. Then the aliens have to invade earth. So the aliens took their things and took one of the spaceships that they made and traveled back to their world.

Right then and there at that very moment Robert busts down the door and enters. All of the scientists are very scared and Timothy is also frightened. Robert always wanted to get inside so he finally got in and found absolutely nothing. So Timothy was relieved that Robert didn't find anything. Robert then left after almost catching them with aliens from another planet.

Timothy was very fed up at this so he decided to call the aliens back to earth this time to wear invisible clothing so they could not be seen by everyone. The aliens in about 1 day of traveling are in earth's atmosphere and landing in his bunker. Now Timothy asked them to make a secure door that no one can break. So they took one day and built a very nice and big door that no one can break. The aliens said to Timothy "There are other aliens that we are friends with that have even more technology than us. We should go meet them together, as they have been studying earth as well." So they embarked on a journey that lasted 4 days and they landed on this amazing planet with two suns that looked and looked amazing. As they were getting off, everyone on the planet greeted them in english because that was the language they all knew as universal, Timothy was very surprised that every single planet teaches english. So the new species started teaching Timothy how to make specific things with specific metal not from earth. They also gave Timothy some of that very precious metal so that he can make specific items with it. Timothy then went back to earth and took that metal and put it in his bunker and started experimenting with it. Doing specific inventions and other things that humans have not seen yet.

Now that Timothy has other inventions and other kinds of space ships he can go much faster and find other places way better and see if there are other aliens in space. He decides not to go and uses the knowledge that the aliens gave him to try and make a very very powerful telescope so he can see everything even underground in planets more than twenty thousand light years away.

So Timothy goes and invests a lot of his money so that he can create that telescope and also tries to create an extremely fast spaceship that can go 100 times faster than the speed of light. He builds it but now he is left with very little money for fuel and other things so he decides to go to mars with his last amount of fuel and brings as many diamonds as he can and sells them on earth and has enough money to continue his investigation. But as Robert heard that Timothy keeps going and getting more money he tries to sue him for all of his money, and as he arrives at court. Robert is trying to tell the judge where the money is coming from but the judge doesn't actually believe him and thinks he is retarded. So Timothy wins the court and keeps his money and gets half of Robert's money. So Timothy, happy that he just won a lot more money and can keep his investigation. He then tries to go 100 light years out which should only take him 1 year. But as he is about 78 light years away he gets pulled into the atmosphere of a nearby exoplanet and and falls into the earth and then, "Bam 3 seconds later he is underground handcuffed in a planet far away with no one to save him.

Then he sees these creatures with amazing powers and technology and wonders what they are. Then the leader of the Aliens asks him what he is doing on his planet. But Timothy just fell into the gravitational pull of the planet, and tells them the truth. The aliens are not buying it and are trying to see if he is a spy from another planet, but then they realize that he is a human and immediately let him go. So he asks them for a spaceship to go to his actual destination. They give it to him and let him go to the other planet because that's where he was headed to. Just 2 months later he arrived there and boarded the planet with his gear.

He asked the aliens for the leader and he came forth and they had a meeting about a truce so that the humans could learn more technology from these extremely intelligent creatures. So he asked the aliens if they could come to earth and tell the American government that there are aliens and if they can make a truce and learn much more things from them.

They then embark on a journey to earth which with the aliens spaceship only takes a week as fast as it actually is. So they reach the special bunker and come out with all of the aliens and then give a phone call to the headquarters and say that they have to speak to the president. The secretary somehow agrees and puts the president on the phone. As the president gets on, Timothy says that there are aliens and he will need to show him as they have them in a bunker. The president thinks that he is lying but is still interested in finding out what he wants to say.

Timothy then goes on an interview with the president of America and tells him that he has aliens in his bunker and that they are friendly creatures. He also tells him that the aliens taught him how to make specific things with science that he has never seen before and how complex stuff is. The president is very interested in this and wants to come with Timothy to his bunker, and Timothy allows him to come to the destination. As the president enters the bunker he sees these big creatures that surprisingly speak English and are very friendly. He sees that Timothy has not lied to him and the president decides to make a truce with the aliens to learn more information about the universe.

Then the president decides to start working with the aliens and the president learns a lot from the aliens, like new technology and other important things like airplanes that are very fast and spaceships that can go faster than the speed of light. The president really bonds with the aliens and the aliens love the president. The aliens then go to their planet but the president learned so much that he decides to go on a journey with Timothy to meet more aliens out there with their spaceships that are extremely fast, and because they are going so fast time passes more in space but on earth its way less time so they don't age at all.

But Timothy always wondered what Neil Armstrong said when he landed on the moon that there is other life out on the moon. So he decided to find it out by going to the moon which is not very far compared to his other travels. As he landed on the moon he saw a lot of base of operations on the dark side and decided to investigate. He found unbelievable aliens that were

huge and big monitoring the earth and everything that the earth did. He decided to try and communicate with them and they were very friendly and told him what they were doing and how the aliens were scared of the nuclear wars on earth threatening the solar system. Timothy understood all of this but didn't know how to stop the nuclear wars until the aliens came up with a brilliant idea to stop nuclear weapons.

The Idea was to try and take them in a spaceship and then to try and deport them to jupiter, as the planet is made of gas and has a very strong gravitational pull it will pull the spaceship to the core and it will be stuck there forever with all of the nuclear weapons in them. So they went to earth and tried to go to all of the countries with major nuclear weapons that could destroy a lot of things. They gathered all of the bombs and placed it in a spaceship that had enough fuel to go close to Jupiter so it would get pulled into its core and get destroyed. They executed this plan perfectly and the world had very little nuclear weapons and all of the Aliens were very happy.

Timothy wanted to know if all of the conspiracy theories about the moon were true so he decided to investigate. He only found aliens and the second one was to find out that the moon is hollow. He decides to land on the moon and try to drill a hole as deep as he can. He drills and drills until he sees some open void and then he sees that he can go into the moon and you will just be floating inside which he found very cool. Now he wonders if there are any aliens on the moon and he decides to float around in the moon to try and find some aliens. He finds absolutely nothing except a load of garbage which probably comes from all of the asteroids that hit the moon. He tries to get out through the hole he came through, surprisingly he can counter the gravity by just going to the drill and climbing on it and arriving at the top.

Robert hears about this and he wants to stop Timothy now more than ever. So Robert decides to go to Timothy's bunker to see what other things he is hiding from the world. He goes there and it is empty with absolutely nothing. Then he decides to take one of Timothy's spaceships and to try and locate his other bunker or where he was. He found where Timothy's spaceship was and he figured out that it was the moon where he was. Robert decides to go to the moon and because they had advanced aircraft he arrived very quickly. He came and saw that Timothy was climbing out of a ladder and he immediately knew what he was doing. And all he asked was "Is It hollow." Timothy then said "Yes, surprisingly there is no life down there, or at least I found nothing there." Robert, thrilled that Timothy didn't find anything decides to go home and let Timothy just search for nothing on other planets as he still doesn't know that Timothy has found alien life out there.

Timothy knows that Robert is on his tail and wants to stop him. So he decides to make a fake newspaper and deliver it to Robert's door so he can go and investigate Timothy. Robert sees the newspaper, reads it and turns pretty angry at Timothy and decides to try and chase him. Timothy is very happy as his plan works very well. Then Robert sees his aircraft and chases it, but little does he know that they are near a black hole and that they are getting slowly sucked in except Timothy's aircraft is way more powerful and can withstand the force. But Robert's aircraft is not his but one of Timothy's so they both have very powerful aircrafts that can withstand the force so it appears to not work.

Timothy then decides to go back to earth and Robert is straight on his tail and they go right beside the moon. Timothy decides to land on the moon really fast while Robert is suffering from burns in earth's atmosphere. Robert then stays a few weeks in the hospital until he recovers.

Robert now is more mad now then ever and all he wants to do is to injure Timothy as much as he can so he can't explore the universe. Timothy then goes to the hospital and he puts an explosive under the chair where Timothy was supposed to stay. He executes the plan and he comes to visit and then "BAM." It explodes and he explodes but what Robert didn't plan is that they are in a hospital and the hospital just takes him and takes care of him. Not a lot of injuries happened because he saw the smoke of the grenade and then got up and put the chair in the way so it didn't do too much damage. He stayed just 3 days in the hospital and got out very easily.

Timothy knew a lot about space but he wondered about earth. So he wanted to find if he could find things like big sharks and big squids like in ancient times underwater and to try and go to Antarctica to see what fossils he could find and what kind of ancient city he could find. So he stopped exploring space and tried to go to the bottom of the mariana trench but he didn't have the gear for it so he went and gave a call to the aliens to try and help him with making a very futuristic submarine that could support very much water. At this point Robert gets out of the hospital and decides to try and find where he is. He goes to his bunker again and finds this phone which calls the aliens and then it clicks. Timothy found aliens and doesn't want to tell him because then he will destroy all of the technology. But now Robert knows and wants to find what kind of technology these aliens have. He wants to try and stop Timothy but he doesn't have the technology for it so he has to go to the aliens for them to help him to stop Timothy.

So he goes into Timothy's lab and tries to find something that could contact the aliens he searches everywhere but he doesn't find absolutely nothing, except for this one odd television with a lot of numbers. Then he realizes that this is a code to a contact. This code has some numbers which when put in coordinates lead to a specific part of the bunker where there is a portal to the aliens which the aliens made to go back and forth but Timothy doesn't even know about this. So he decides to go and enter the portal to see where it leads. It leads him to a planet that looks like it has life on it but he isn't sure. So he is exploring the planet when a huge being just comes to him and talks in very clear English. He asks the being to help him to stop Timothy. Luckily the being is the leader of the planet and knows a lot about earth and has heard about him. The leader doesn't like that Timothy is exploring all of the universe. They both are on the same team and want to stop Timothy. The leader is much smarter than humans and they made a suit that can just turn them into a person at the click of a button by changing the dna.

So they went to earth and tried to make him go to another country and get stuck there in prison. The leader had an idea to try and banish him from the universe through a black hole because if he went to prison then he could just call his alien friends and get out very easily. So the alien went to Timothy in person and wanted to show him something in space. So they hopped on Timothy's spaceship and went off into space. Now the leader was making him head

to a black hole where they would both get sucked in but the leader could just get out through a teleport he had from his crazy technology. As they were heading there they were having a lot of fun on the way. Timothy tries not to expose that he found aliens while not knowing that he is talking to one at that very moment. Moment by moment they get closer to the black hole and the leader pulls out his button to teleport to earth where Robert is. Timothy still doesn't notice there is a humongous black hole right in front of them as everything is black and space is black. Until they both get sucked in. The leader just clicks his button as gets teleported to earth but Timothy is stuck there. Now the leader and Robert didn't know that he also had a call to aliens so he called them saying that he is in a black hole and he needs help out. Then right as he is about to get crushed Timothy gets teleported to one of the neighboring planets with the aliens he called. Then Timothy gets transported to his bunker and meets the leader there with Robert just talking about how it worked perfectly. Timothy, shocked that the guy survived, asks him if he has any contact with aliens. Then the leader turns back into a non human and tells him that he is a non human and he can shapeshift into any human. He was very shocked and asked why he wanted to go with him in space. The leader then tells him that he wanted to show him a planet but he didn't notice the black hole there just sucking them in. The leader then says sorry but still wants to get rid of him.

Now the leader and Robert are very good friends. They go to other planets, and explore everything they have to offer to them. They even meet new aliens. apparently the earth is the only planet that doesn't have very good technology out of all planets.

So the leader and Robert went back to the leader's country. The leader had a lot of information to tell Robert about earth and everything in its orbit as he studied it for hundreds of years. He tells him how people were before and how everything happened on earth. He said that for every single thing in history the leader was there watching it from a distance documenting everything on his computers in his lab.

After that Robert wanted to go back to earth as his tank of air was slowly running out and he needed to get to earth. But the leader had a lot of oxygen and refilled his tank but then the leader laughed at what kind of gear he had and gave him an invisible gear that made him breathe fresh air and always would get refilled instantly.

Timothy had a tracker however on Robert and saw where he was. So he decided to travel to that destination to investigate what he was doing very far away from earth. But the leader has extremely good vision and saw the spaceship of Timothy from very far away and sent a crew to stop him. The crew of aliens all went in 15 different spaceships and all started to go toward Timothy. He was very scared and ran off as he didn't want to get injured by who knows what kind of aliens. But Timothy knew that Robert was there and that he sent the aliens to protect him out there. So Timothy got some of his alien friends and decided to go to war against this planet where Robert was. So he got about 50 aircrafts and went howling at the planet. The leader seeing this sent 100 spacecrafts to scare off Timothy. Robert however had no idea what was happening because the leader could talk to his military through their brains. Then Timothy sees the spacecraft going at them, gets very scared and wants to go back to earth.

The leader then tells Robert that Timothy is trying to stop him and that he has a tracker somewhere on Robert but they don't know where. So they search everywhere on his clothes and finally find it. Then they go to space and just throw the tracker as fast as they can and now it will travel forever at that speed as there is no gravity. So now the leader and Robert go to another planet as opposed to where they threw the tracker so that Timothy can get messed up and not find where they are. Luckily Timothy is very smart and stuck a few trackers and they only got rid of one. But Timothy didn't know which one was the correct one so he went after one of them but it was the wrong one. Timothy just kept following until he found a tracker just lonely in space and took it and deactivated it and then now he had the correct place of where Robert and the leader were. He went there as fast as possible but this time the leader didn't notice him and he just went on an uninhabited planet beside Robert and the leader. Robert and the leader just let him enter the planet and they started having a nice conversation on space and specific things that they might want to try. But here's the thing. Robert and the leader were talking about these things so they could know what Timothy's next plan was. So now Timothy announced that he would go as far as he could and find a very big black hole that he could then eliminate energy and see inside of it and try to go into a black hole to investigate the forces in it. But just like before Robert wanted to try and go with him and try to make the power more strong and get Timothy stuck in the black hole. So then they all left the planet and went on each of their missions. Timothy went to the black hole he found earlier and tried to stop all of the energy while the leader and Robert tried to make it larger. Robert and the leader had much better technology and were winning a bit and the force kept getting stronger and stronger and started sucking Timothy in. Timothy saw this and started to use more force to try and cancel this. Timothy now was stuck and the only thing he could do was to just fight the force as hard as he could and not get sucked in. But then All of the gear of the leader and Robert broke so now Timothy just gets thrown out of the black hole and explodes into space going very fast. Luckily he has a jetpack that allows him to maneuver around space and goes to the planet where he found Robert and Timothy earlier. But he is out of gas and is stranded on this planet. But he has the call button to his alien friends. He clicks the button and a few aliens just get teleported to where Timothy was. They bring him fuel and a spaceship for him to get back to earth and not suffer from injuries. Robert and the leader however are still thinking that Timothy is stuck in space. They are trying to fix the machine to make it work and leave the black hole how it was before, But they can't and they just have to let it like this and go back to earth and rest a little.

They arrive on earth very fast and there is Timothy right there with his alien friends playing some games. The leader and Robert go to Their place and chill there for a few weeks. Robert is introducing him to specific types of food around the world and other things, like cars, planes, specific types of technology that they have. Then after 1 month of just going and traveling around the world and going to landmarks and museums they finish. They decide to go and travel back to the planet where Robert originally met the leader and for the leader to tell him of technology there. So they arrive there. The leader has much better technology and just tells him about all of this complicated stuff against gravity and how you can fly with this technology and how you can teleport with this and all kinds of science. In school on that planet all they learn

is science and language arts so they can learn things about the universe. The leader also went around the planets and showed and showed him his lovely friends.

Robert and the leader go to the restaurant and meet Timothy and they say. "Hey Timothy, how about we just stop this chase" Timothy long and hard thinks about it then replies "How do I know you are being honest and you won't try and lock me up" The leader then says "you people from earth have found so much technology from our planets that we should just team up and be stronger than ever." They then sign a peace treaty and have a nice meal.
