

Tutorial: How to take the ears from miqo'te hairs

By RoseBerry♥#1812

What you'll need:

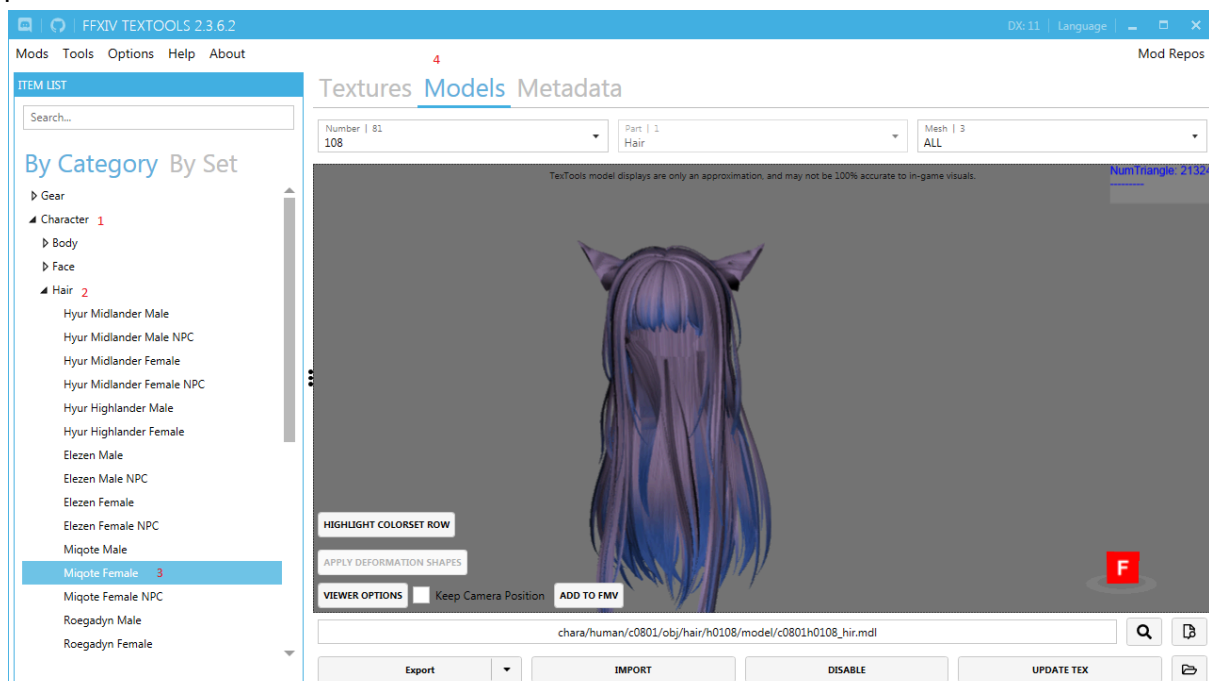

- Textools
- Blender (<https://www.blender.org/>)

Disclaimer:

This only will work with modded hairs. I'm gonna use one of my modded hairs for the example. I'll use the hair Honey Dew, you can find it in my ko-fi shop (<https://ko-fi.com/s/4493502329>) .

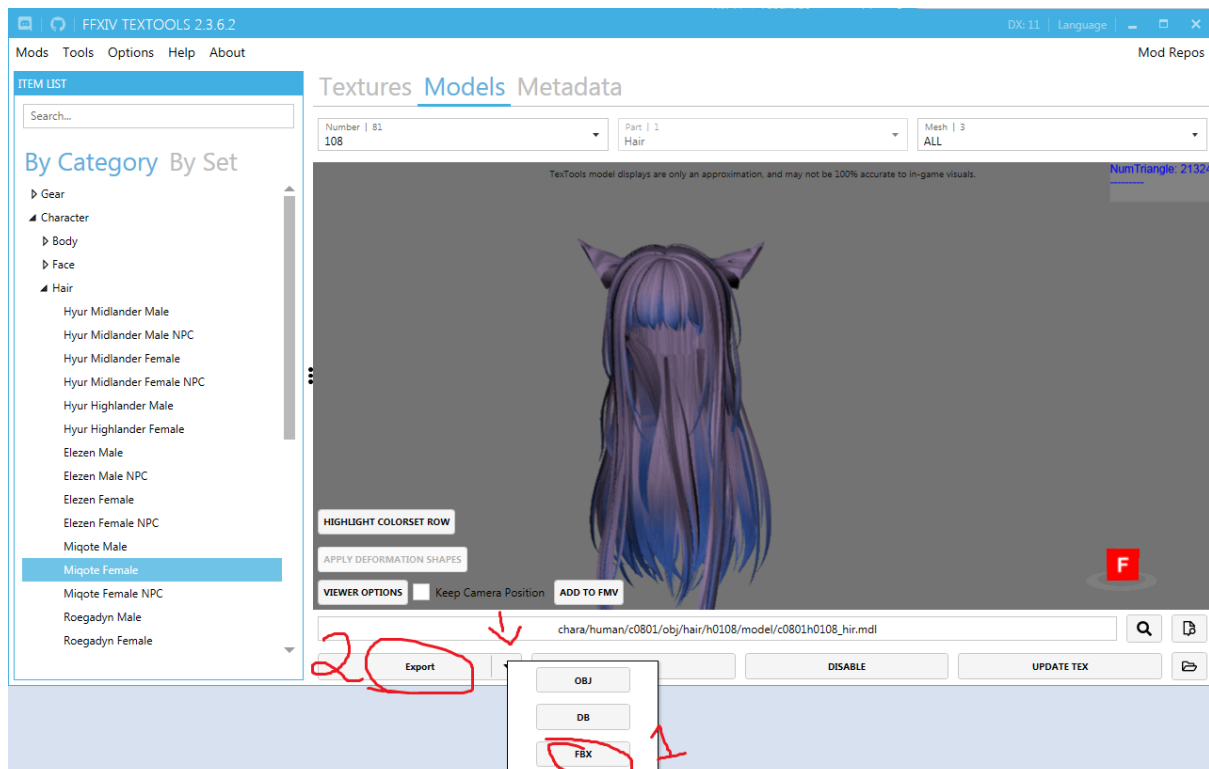

Step 1:

Install the mod hair and take note of the hair number. Honey dew is on hair 108. In the left panel, select character(1) > hair (2) > miqote female(3) and choose models(4) in the right panel.

Step 2:

Export the model in fbx. To do this, select the arrow next to export and select fbx and then click export. Do not close textools.

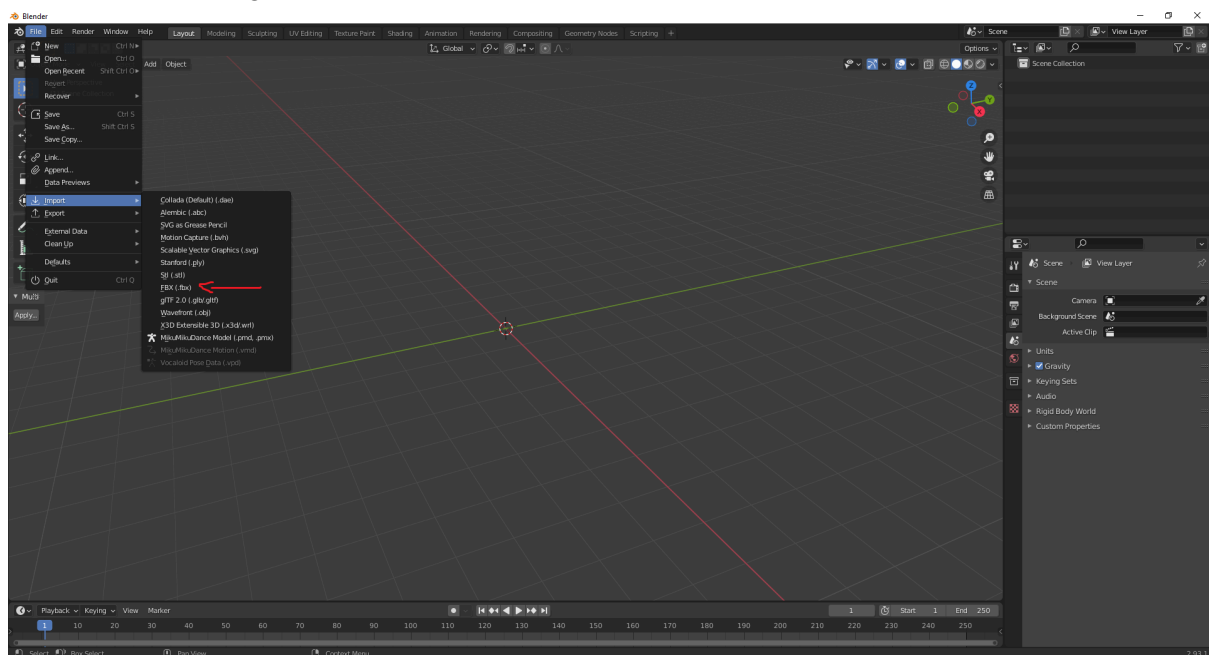

Step 3:

Open blender and delete the cube, light and camera on the right panel. Select all of them and click 'delete' on your keyboard.

Step 4:

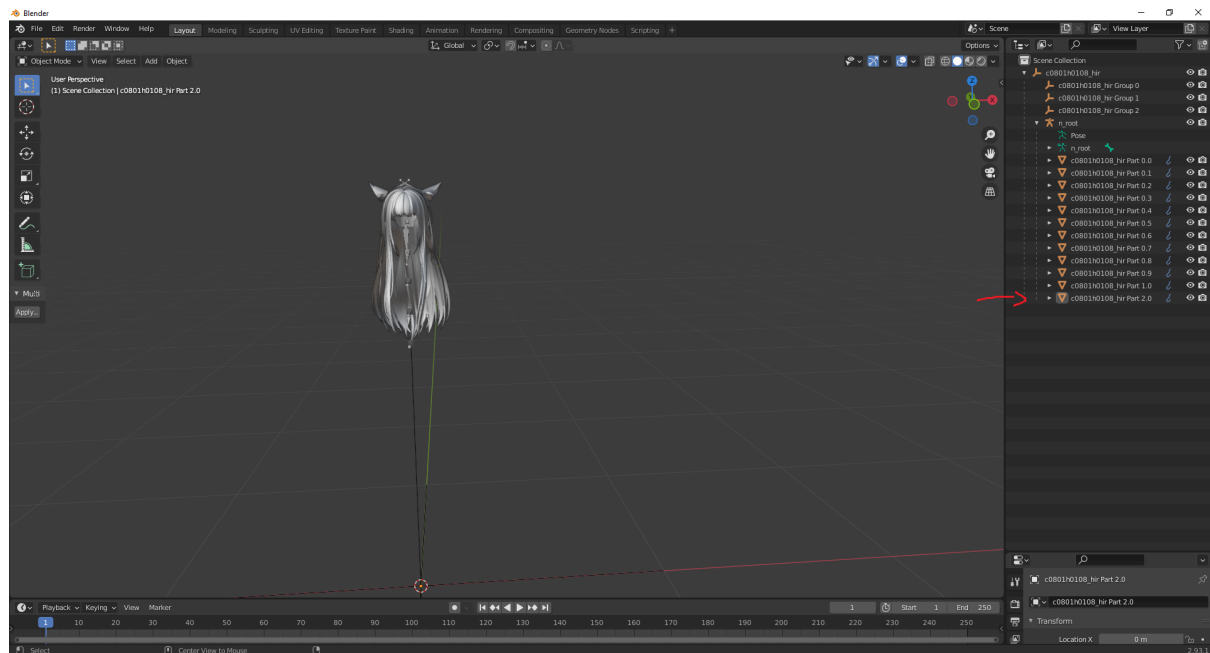

Open blender and go to File > Import > FBX.

Import the fbx file you just exported. This file will be in your textool folder. For the example we're using, the path should be this: Textool>Saved>Character>Hair>Miqote>108>3D . Import the file inside of that folder and the hair should appear in the big central area.

Step 5:

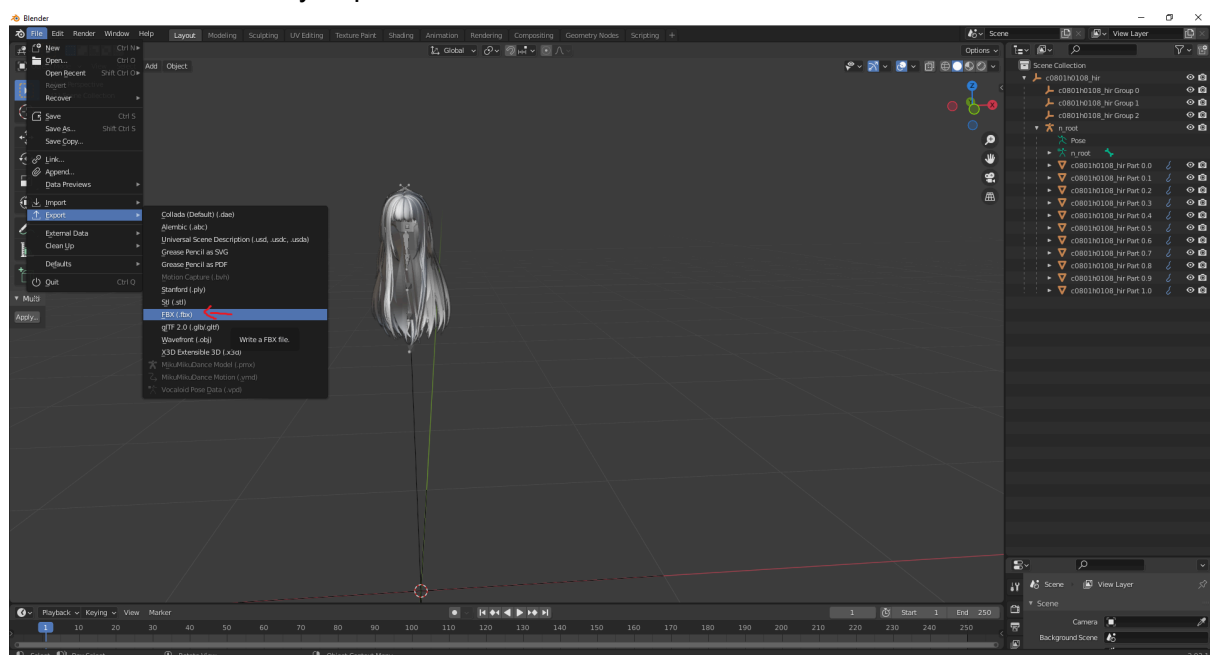

The hair will appear in the big area and the files will be in the right panel. Select the arrows to show the rest of the files and find which ones are the ears for miqo'te. In this case, the ears have the name *c0801h0108_hir Part 2.0*.

Select it and delete it with the key 'delete' in the keyboard. Now the hair should be earless.

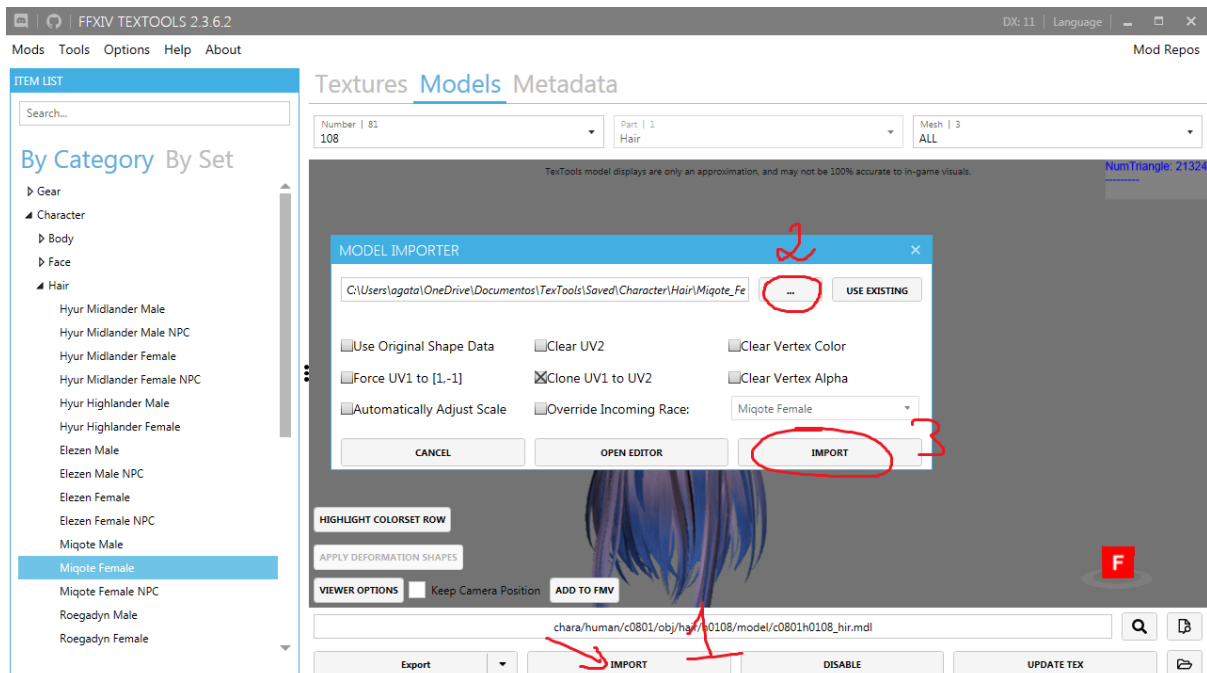

Step 6:

Export the hair how it is. Go to File>Export>FBX. You can choose to put it in the same folder where it was or where you prefer.

Step 7:

Go back to texttools and, in the same hair number, select Import(1). A small pop up window will appear. Select the 3 dots(2) and choose the file you just exported. After, choose import(3).

And it should be done! \o/
