1. Filter > pixelate> Mezzotint
    a. Type= medium lines

2. Filter > Blur > Radial Blur
    a. Amount =100
    b. Method = zoom
    c. Quality = best

3. Repeat this radial blur 4-5 times.
    a. You can easily repeat the radial blur by hitting command F, do this 4-5 times

4. Duplicate the background Layer
    a. Command j

5. Make sure the top layer is active (the new duplicated background)

6. Filter > Distort > Twirl
    a. Set to a +degrees (this is where you can get creative) I like to use anywhere from 50-80 degrees

7. Click on the background layer to make it active

8. Filter > Distort > Twirl
    a. Set to a - degrees (negative number)
    b. You have to use the exact opposite number that you used in step 6a, except make it negative.
        i. So if you used 50 in step 6a, you will use -50 now.

9. Make the top layer active

10. Set the layer to this blend mode:
    a. Choose a **Blend Mode** such as screen, overlay, lighten, soft light

11. Go to the fly out menu in the layers panel, select flatten

12. Finished!!!
