ARTICLE INFO	ABSTRACT (Distinct label section into: background, objectives, methods and research results briefly. The abstract is written within a length of 200-250 words.)
Submitted : Revised : Accepted : Published : Corresponding Author: Corresponding Author Email:	**Background:** Write background of the research in this section. **Objectives:** Explain the purpose of this study. **Methods:** Add study designs, samples, variables and instruments, data analysis. **Results:** Write study findings in this section. **Conclusion:** Write conclusion and recommendation of the research in this section. **Keywords: Keyword; Keyword; Keyword; Keyword; Keyword** (At the end of the abstract, 3-5 keywords or phrases are listed in alphabetical order, separated using semicolons (;).)

INTRODUCTION

The introduction should briefly explain the background of the study, provide state of the art (current conditions referring to latest research), the gap that this research wants to fill based on the state of the art, and end with research objectives that support the latest research. Please also indicate the contribution or novelty of this research to science.

METHODS

The research method for an original article should be divided into several sub-sections containing study design, population and samples, study instruments, data collection, and data analysis.

Study design
Population and samples
Study instruments
Data collection
Data Analysis

Meanwhile, a review article consists of study design, search strategy, eligibility criteria, data extraction, and data analysis.

Study design
Search strategy
Eligibility criteria
Data Extraction
Data Analysis

RESULTS AND DISCUSSION

Results should be clear and concise. Show only the most significant or main findings of the research. Describe the outcome of the study. Describe Tables as "Table" and Figures as "Figure" (not "Fig."). Every figure should have a title or caption, which should be concise but clear enough to explain its main components independently from the text.

Table I. Table Example (Without vertical lines)

Characteristic	N (%)
Gender	
Male	6 (15.4)
Female	33 (84.6)

Each data presented is discussed comprehensively in one flow: presenting the data, comparing it with other similar research, and putting forward relevant theories related to the existing data.

Discussion must explore the significance of the results of the study. Adequate discussion or comparison of the current results to the previous similar published articles should be provided to show the positioning of the present research (if available).

CONCLUSION

The conclusion is written in one paragraph, without numbering, and answers the research objectives briefly, concisely and clearly. Please only provide significant findings and contributions to the research.

ACKNOWLEDGEMENT

If necessary, you can type your acknowledgement here. Acknowledge anyone who contributed to the research, as well as any funding or grants. The names of funding organizations should be written in full, as well as the grant numbers, if available. List any individuals who helped you during the study (e.g. assistance with study design or analysis, or guidance through a study area), or writing of the article (e.g. providing advice on the language, editing, or proofreading the article).

STATEMENT OF ETHICS

Please mention the ethical approval number, including the issuing institution and publication date.

REFERENCES

Utilize a reference manager (preferably Mendeley) with the American Medical Association format. The referenced library sources are new sources with a limit of the last 10 years and contains a minimum of 80% of the main references.
