About Me

When you have a problem, I have a solution. My work isn't just writing software. It's about delivering a holistic approach. It could be updating your web presence, writing an app, or something else. Technology choice is secondary. Impact before code.

I'm a Frontend and UX focused Full-Stack Developer specializing in React, Vue.js, TypeScript, and modern web applications. I build user interfaces and complete solutions, with backend experience in Laravel and Symfony. I've delivered projects across fintech, healthcare, government, and education. I focus on product quality and solving real business problems.

Key Competencies

Programming Languages

TypeScript, Python, PHP, JavaScript, HTML, CSS, SASS, LESS, Java, C++, C#, Ruby

System Architectures and Frameworks

React, Redux, NextJS, Vue JS, Pinia, GraphQL, Symfony 3.4, Doctrine, RabbitMQ, Drupal 8 & 7, jQuery, jQuery UI, AWS, Laravel, Zend, Twig, Angular, Backbone JS, Elasticsearch, WordPress, Laravel+Spark, Magento, Bitrix CMS, Slim PHP, Handlebars JS, Smarty, Django, Ruby on Rails

Testing/CI

Jest, PHPUnit, Behat, Buildkite

Teamwork

Pair programming, Code reviews

Databases

MySQL, PostgreSQL, MongoDB, MS SQL, and ORMs (e.g. Doctrine)

Tools

Docker, Vagrant, Webpack, Gulp, Yarn, npm, Git and GitFlow, Capistrano

Experience

Senior UI Engineer at La Trobe University, 2025

I started from the specifications document and built the UI for the Advanced Standing Pre-Offer (ASPO) system at La Trobe University to the production and business acceptance stage. The platform handles credit assessments for international students and reduced admissions response times while improving student satisfaction ratings. It automates much of the workflow and matches previous study records. The system integrates with StudyLink and the Student Information System, helping admissions staff process advanced standing applications while keeping audit trails and coordinating with academics.

VueJS, TypeScript, PostgreSQL

Senior Frontend Developer at JET Charge, 11/22 - 11/23

I took the prototype for the EV Charging Management Software from the previous developer and built the UI up to the Early Access testing stage with customers. I worked in close collaboration with the backend team and hardware engineers, and performed usability testing with user interviews and iterative design refinements based on feedback.

React, NextJS, TypeScript, .NET, DevExpress

Senior Frontend Developer at TallBob, 01/21 - 07/22

At TallBob, we had legacy software for the customer self-service portal. The company was planning a rebrand and expansion of their business, and the old system was the blocker. I was the key developer responsible for redesigning it into the modern web application. I worked in collaboration with the back-end developer and a junior front-end developer. The new portal increased existing customer satisfaction, contributing to customer retention as well as bringing new clients in.

We utilised a technology stack featuring React, TypeScript, Laravel Mix, Jest/React Testing Library, npm, and AWS Lambda.

Contract Full Stack Developer at illion, 10/20 - 01/21

Developed the UI for the Open Banking solution, in collaboration with a fully remote team based in Adelaide.

React, Typescript, Laravel 6.x, Eloquent, PHP, SASS, Material UI.

Senior Developer at EstimateOne Pty Ltd, 03/20 - 06/20

I worked in a remote team, handling product updates, layout fixes, and issue investigations through a ticket system. Conducted regular peer code reviews and maintained teamwork with pair programming and daily catch-ups.

The tech stack included PHP 7.x, Symfony, RabbitMQ, React JS, GraphQL, TypeScript, AWS, SASS, Elasticsearch, PHPUnit, and Behat. Explored services like Buildkite, Fullstory, Trello, Sentry, and InVision and used tools like Vagrant, Yarn, npm, Webpack, and Capistrano.

Full Stack Developer at Bayside City Council, 03/19 - 03/20

I communicated with stakeholders and third-party vendors concerning development work on the Council website and other web properties. Managed development workflows, both internally and with external vendors. Also performed in-house development work: SASS styling of eCouncil application forms, BAU web development.

Technology stack: Drupal 8 & 7, Docker, PHP 5.x, SASS, Node JS, Git, DevOps for Linux hosting.

Senior Full Stack Developer at National Heart Foundation of Australia, 11/17 - 11/18

My role involved managing the Foundation's web properties, communicating with third-party vendors, and implementing solutions in-house. I implemented PayPal integration into the Foundation's donation forms and multiple style and design changes. I monitored the functioning of the Foundation's websites through constant monitoring (Pingdom) and built-in hosting tools. I also managed host records across all web properties.

Technology stack: PHP 5.x, ExpressionEngine 2, jQuery, CSS3, Gulp, LAMP stack.

Frontend Developer at FanHub Media, 02/17 - 10/17

My role was to style and customise front-end implementations of fantasy sports games (e.g. Footy tipping, Dream team) to the requirements and design by the client. This did not include changes to core logic of the platform, which was shared between all games and managed by another team offsite. This job required a great deal of coordination and cooperation between developers both in the local team and remote.

Technology stack: Angular JS, Backbone, CSS3, Stylus, SASS, Gulp, JSON/REST, PHP 5.x.

Full Stack Developer at Cloud Stratagem, 10/16 - 01/17

I built custom software solutions within the agile-based team of developers and designers. I worked on implementing a CRM for a company's client.

Technology stack: PHP 5.x, Laravel, Angular JS

Full Stack Developer at IE, 05/15 - 09/16

IE is a digital innovation agency. They are recognised leaders that drive business outcomes for progressive organisations like Telstra, Nike, Sportsgirl, Tourism Victoria, Crown and Movember.

I joined IE as a contractor to work on the current year's release of Movember platform, and after completing this project was offered a permanent role. I worked across a range of projects, including next year's Movember, and also as a Front-end developer through subcontract at Telstra Digital.

Technology stack: PHP 5.x, Zend 1.x, Facebook API, jQuery, React JS, Laravel, Spark, Vue JS, WordPress, Drupal 8, Magento.

Web Developer (Contract) at Combitel, 02/15

Combitel is an IPTV Solution provider, Cheltenham, VIC.

I worked on design and implementation of UI for rich media delivery platform, as a once-off project contract.

Technology stack: PHP 4.x, CSS3, HTML, JavaScript (vanilla)

Junior Front-End Developer at Aussie Farmers Direct, 11/11 - 02/14

Online Store for Fresh Milk, Fruit & Vegetables, Meat & Seafood. Clayton, VIC.

I worked as part of a multidisciplinary team on a company's primary product, online store for fresh produce. This was my introduction to the concept of web applications and building of rich and interactive frontend experiences, as opposed to previous concept of backend-driven websites.

I implemented a frontend solution based on JavaScriptMVC framework (similar to Backbone JS), obtaining data from the backend API in Symfony 2.x, ensuring proper functioning through CI and automated testing with Jenkins, JUnit and PHPUnit. My responsibilities also included work on the company's marketing site and implementing landing pages for marketing campaigns.

Technology stack: JavaScriptMVC, jQuery, CSS3, PHP 4.x, Symfony 2.x, Jenkins, Selenium, JUnit, PHPUnit.

Full Stack Developer at Iedex, 07/11 - 09/11

Iedex online is a provider of organizational performance management tools, online 360 feedback tool, staff engagement surveys. South Melbourne, VIC.

Performed code redesign and optimisation for online performance management tool. Also system administration and DevOps tasks, database profiling and optimisation.

Technology stack: PHP 4.x, MySQL, ExtJS, jQuery.

Backend Developer at ACER (Contract), 03/11 - 06/11

Australian Council for Educational Research. Camberwell, VIC.

Worked in a multidisciplinary team building online scoring system for paper-based knowledge tests. My responsibility was to implement backend features in PHP and Zend 1.x, and also take part in general product and database design.

Full Stack Web Developer at Procision, 09/10 - 02/11

IT Services provider. North Melbourne, VIC.

Implemented solutions based on Bitrix Intranet CMS, performed scripting for Lexis Affinity document exchange system and built data reports.

Technology stack: PHP 4.x, Bitrix CMS, Data design, Python scripting

Worked across multiple roles overseas, Before 2010

These roles include: PHP Development, Infrastructure administration, C++, Java ME development for mobile platforms, Algorithms development for computer games (physics simulation and AI logic), being a senior support specialist for Bitrix CMS.

Volunteer Projects

Full Stack Developer, Project Manager and DevOps at www.koenigbicycle.ru, 2006 - present

Site is an official web portal of a bicycle tourist club, and also a social platform.

I have built this site and provide support for it since 2006.

Technology stack: PHP 4.x, Slim framework, React JS, SASS, MySQL.

Education

1998 - 2003: Immanuel Kant Baltic Federal University

Diploma of Information Technology
