Tink's Tonic HCPCS Billing Code Guide

What is an HCPCS Code?

HCPCS (Healthcare Common Procedure Coding System) codes are standardized billing codes used by Medicare, Medicaid, DME companies, and commercial insurance plans to identify medical products, supplies, and services.

Important for Tink's Tonic

A HCPCS code allows a product to be identified on insurance claims but does not guarantee coverage or reimbursement. Coverage decisions are determined by the patient's insurance plan and supporting documentation.

Tink's Tonic HCPCS Codes

B4155:
Chicken, Beef, Whole Egg, Sweet Potato, Green Pea, Kale, Beet, Brussels Sprouts, Collard Greens, Banana, Strawberry, Blueberry, Orange, Peach, and Pumpkin.

Typical Reimbursement Workflow

1
The provider evaluates the patient and determines nutrition support needs.

2
Provider completes an order form and medical necessity documentation.

3
DME companies submit documentation and claim information.

4
Insurance reviews eligibility, diagnosis, and medical necessity.

5
Product is dispensed if approved.

Information Providers Should Include

Patient Name
Date of Birth
ICD-10 Diagnosis Code(s)
Route of Administration (Oral, G-Tube, J-Tube)
Calories Per Day
Length of Need
Product Selection
Quantity Per Month
Provider Signature
NPI Number
Important Note

HCPCS billing codes are used for claim submission and product identification. Assignment of a billing code does not guarantee coverage, reimbursement, or payment.
