

How to do Green screen

<http://bit.ly/bchsgreenscreentutorial>

[My Video tutorial for this page](#)

If you would like some video footage with a green screen to play with, [go here](#). (You need a PHRD account to access this.)

1. First Crop your footage
2. Apply auto contrast (Effects window)
3. Apply Ultra Key (Effects window)
4. -Select the key colour to be removed (use eye dropper) NOTE: in the new version of Premiere Pro, when you click on the eye-dropper, it doesn't turn into an eyedropper, but it still works the same way. Just click on the eyedropper and click on the green screen.
5. Set output to Alpha channel to see what needs to be removed

If these settings don't entirely work, play with the sliders to make it work better for your footage.

Under Matte Generation:

6. -Set Transparency to 37
7. -Set Highlight to 10
8. -Shadow to 52
9. -Tolerance to 20
10. -Set pedestal to 100

Under Matte cleanup:

11. Set Midpoint to 50
12. Set Output to back to Composite
13. Click on the timeline and hit enter to render whole sequence

Also, here's a [Youtube Tutorial](#) that was really helpful

[Hollywood Camera work](#)

Items I will be looking for:

1. No obvious "artifacts" left over from removing the green screen.
2. No "Green Glow" around the person.

- 3. Significant movement of characters**
- 4. Realistic looking special effect**
