Keywords:
Please provide 3-5 words and every keyword separated by semicolon (;)

ABSTRACT

This paper provides a template for preparing papers for electronic production of the Jurnal Ilmu Sosial dan Humaniora. A well-prepared abstract enables the reader to identify the basic content of a document quickly and accurately, to determine its relevance to their interests, and thus to decide whether to read the document in its entirety. The Abstract should be informative and completely self-explanatory, provide a clear statement of the problem, the proposed approach or solution, and point out major findings and and a summary of impactful conclusions. The Abstract should not be more than 250 words in length. The abstract should be written in the past tense. Standard nomenclature should be used and abbreviations should be avoided. No literature should be cited. The keyword list provides the opportunity to add keywords, used by the indexing and abstracting services, in addition to those already present in the title. Judicious use of keywords may increase the ease with which interested parties can locate our article.

1. INTRODUCTION

Introduction includes background, theoretical basis, problems, problem solving plans and research objectives. The introduction is written using Cambria letters, size *10*, space *1* and line spacing *1* cm. Text is typed in a print area with *margins* from top, bottom, left, right made ***2.5cm.*** A4 paper size, *8.27-inch-wide*, *11.69 inch high*. Layout: *0.5-inch header*, *0.5-inch footer*. The text *does not need* to be page numbered (Sulianto et al., 2019; Syukur et al., 2020).

Article Type

Articles are original articles of research results or review results from previous articles. Articles can be written in Indonesian or English. The number of articles pages is *no more than 20 pages*, including references.includes a list of references. The systematic writing of the research article consists of title, author's name, institution and correspondence address, abstract, keywords, abstract, keywords, introduction, methods, results and discussion, conclusions and suggestions, gratitude and reference list (Wahyuni et al., 2018; Suparman, 2012). The systematic conceptual article writing (containing the results of the review) consists of the title, author's name, institution and correspondence address, abstract, keywords, abstract, keywords, introduction, core part, summary and list of references.

The title of the article is written using *16 size* Cambria letters, capitalized, bold, Align Right, consisting of a maximum of *20 words* and describing the contents of the manuscript. The author's name is written using the size *12* letters *Cambria* not accompanied by a title, the first name is abbreviated while the last name (surname) is not abbreviated. Names of authors from different agencies are marked using a superscript behind the name. Manuscripts are presented narratively (without numbering in front of subtitles) and presentation in the form of subtitles is avoided.

The formula is written separately not in the sentence and equipped with numbering on the right. The formula is written using Microsoft equation.

The picture is inserted in the *text box* and the *figure caption* is placed below the image. The caption of the image is numbered and the image must be referred to in the text. Captions begin with *uppercase* letters. Captions of images with more than one line are written using line spacing 1. The image is drawn with a line width of 1pt and should have good contrast quality.

Figure 1. This is a figure. Schemes follow the same formatting on

The table is created with a line width of 1pt and the table captionis placed above the table. Information on tables consisting of more than 2 rowsis written using 1 line spacing.The table lines are only horizontal lineswhile vertical lines are omitted. Example of how to write Table 1.

Table 1. Elemental compositions of sampling sites

Site	TiO_2 (wt%)	Al_2O_3 (wt%)	MnO (wt%)	MgO (wt%)	Na_2O (wt%)
GIJ	0.5	16.4	0.19	2.74	3.00
GPW	0.78	19.0	0.18	4.57	2.55
PWH	0.58	20.9	0.12	1.55	3.00
SKP	0.68	17.8	0.16	3.12	2.75

2. METHOD

This section describes how the research was conducted, research design, data collection techniques, instrument development, and data analysis techniques. This section explains how the data was collected/generated and an explanation of how the data was analyzed.

3. RESULT AND DISCUSSION

Result

Results are the main part of scientific articles, containing: final results without data analysis process, hypothesis testing results. Results can be presented with tables or graphs, to clarify the results verbally.

Discussion

Discussion is the most important part of the entire contents of scientific articles. The objectives of the discussion are: answering research problems, interpreting findings, integrating findings from research into existing sets of knowledge and composing new theories or modifying existing theories.

4. CONCLUSION AND RECOMMENDATION

Contains conclusions and suggestions. Conclusions include answers to research questions. Suggestions refer to the results of the study and take the form of practical actions, mention to whom and for what advice is intended. Written in essay form, not numerical form.

5. ACKNOWLEDGE

If any, thanks are addressed to official institutions or individuals who have provided funding or have made other contributions to the research. Acknowledgments are accompanied by a research contract number.

6. CREDIT AUTHORSHIP CONTRIBUTION STATEMENT

This section explains the individual contribution of each author to the manuscript, following the CRediT (Contributor Roles Taxonomy) standard, for example: Conceptualization, Methodology, Software, Validation, Formal Analysis, Investigation, Resources, Data Curation, Writing – Original Draft, Writing – Review and Editing, Visualization, Supervision, Project Administration, and Funding Acquisition. Every listed author must be given at least one role, written using the author's initials. Example: A.A.: Conceptualization, Methodology, Writing – Original Draft; B.B.: Data Curation, Formal Analysis, Writing – Review and Editing.

7. CONFLICT OF INTEREST

This section is a declaration by the authors regarding the presence or absence of any financial, personal, or professional relationship that could be perceived to influence or bias the research and its interpretation. If there is no conflict, authors may state "The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper." If a potential conflict exists, it must be disclosed clearly, including its nature (e.g., funding source, employment, consultancy, or personal relationship).

8. ETHICAL STATEMENT

This section confirms that the research was conducted in accordance with relevant ethical standards and guidelines, particularly for studies involving human participants, animals, or sensitive data. It should state whether ethical approval was obtained from an institutional review board or research ethics committee, including the approval number where applicable, and confirm that informed consent was obtained from participants when relevant. For research that does not require ethical clearance, authors should briefly explain the reason.

9. DATA AVAILABILITY

This section explains how and where the data supporting the findings of the study can be accessed, in line with the open science practices required by most Scopus-indexed journals. Authors should state whether the data are publicly available (including the repository name, link, and/or DOI), available from the corresponding author upon reasonable request, or not available due to ethical, privacy, or proprietary restrictions, together with the reason for the restriction.

10. DECLARATION OF GENERATIVE AI USE

This section discloses whether and how generative artificial intelligence (AI) or AI-assisted technologies (e.g., ChatGPT, Grammarly, or similar tools) were used during the preparation of the manuscript, such as for improving language, grammar, or readability. Authors must specify the name of the tool used and its purpose, and confirm that the tool was not used to generate original scientific content, data, analysis, or conclusions, and that the authors take full responsibility for the accuracy and integrity of the final manuscript. If no such tools were used, authors should state this explicitly.

11. REFERENCES

The references consist of the author's name, year of publication, article title, city name and publishing institution. The reference list is sorted according to the first letter of the author's name (A-Z). The second word in the name agreed as a family name. Authors may follow the APA 7th Publication Manual to write references. All references referred to in the text must be written in the reference list. Preferred references are articles taken from the latest journals/publications no later than 10 years before article submission (paper submission). *(The manuscript must include at least 40 relevant, up-to-date references sourced from reputable journals. Self-citations are limited to a maximum of two articles, and must be from relevant, reputable journals).* Example of how to write references:

Pratama, I. N., Ibrahim, A. H., & Akbar, P. (2023). Pentahelix Collaboration Concept as an Effort to Accelerate Poverty Reduction in the Covid-19 Situation in the City of Mataram. *Jurnal Public Policy*, *9*(1). https://doi.org/10.35308/jpp.v9i1.6439
