.Peace be upon you and God's mercy and blessings

:Today, we present the exclusive and comprehensive method

Exclusively and the first in the world: Repairing the Original IMEI of Xiaomi 13T with the product code 'Aristotle' using all instructions and memory with the MTK processor. This involves partial flashing without deleting data or formatting, using the latest version and latest security of the HyperOS system, with a .LOCKED BOOTLOADER hardware configuration

First, open the phone and replace the appropriate 33K resistor

: download file from here

here

The modified file is ready for direct flashing without any modifications. Flash it using any AUTH server, with the best and fastest server being the HalabTech .server

Very Important Note:
.Exclusively, flash using the Firmware Upgrade mode

After flashing the file, open the DFT PRO interface.
Enter the first and second IMEI numbers in Meta Mode, as shown in the following image

After completing the process, wait for the phone to boot up. Congratulations, the IMEI has been repaired without formatting, without risk, and without deleting any data
