

✓ Plant classification

There are many different types of plants which we can classify in different ways.

- ❖ **Grasses** or herbaceous plants have a soft stem. They are thin and flexible and usually short.

- ❖ **Bushes** have a thick, hard stem with low branches.

- ❖ **Trees** have one thick, hard stem called a trunk. They are the tallest plants and have high branches. They can be deciduous (if they lose their leaves in autumn) or evergreen (they have leaves throughout the year).
