Surgeons	Method	Comments
O'Brian-Coon●◆◆	Offers traditional but also new method called PIPE (periumbilial) - taken from the center of the belly area but is closed into a neat Z-shaped scar. Nerve hookup and UL is possible.	
		One report of full sensation, some reports of partial sensation, most people have no sensation
UK Surgeons●◆	Suprapubic - Vertical flap directly above the pubis Diagram (Method and scarring slightly different than US)	Tactile sensation is mixed, usually only at the base. Nerve hookup is possible with UL, so in some cases erotic sensation is possible.

Most US Surgeons●◇	Suprapubic (Method and scarring slightly different than London)	
João Decio Ferreira●◇	Modified suprapubic. Website says “double tubular flap of the abdominal wall (Gillis technique)” quote and pics	
Kim Jin Hong●◇ Ivan Aguilar●◇	Kim method - described as a bilateral conjoined pedicled groin flap pics
