

Promethean Dental Systems Partners with American Association of Dental Boards on Remediate+ Program

July 26, 2021 ---

[Promethean Dental Systems](#) (PDS) has formed an exclusive partnership with the American Association of Dental Boards (AADB) to provide exclusive remediation services for the Remediate+ Program.

Remediate+ is a fully customized remediation program designed to help support state and territory dental boards in their mission to educate oral health practitioners who show signs of benefiting from

additional training. Services are provided to meet the customized needs of all state and territory dental boards.

Remediate+ is a professional-friendly service that utilizes standardized courses and assessments that are combined to create customized educational services to meet each individual dental professional's needs. All courses are fair, objective and assessed accurately. Remediation courses will be taught in a multimodal format and will cover remediation needs, comprehensively. Courses will provide evidence of completion and performance.

Promethean Dental Systems will bring advanced technology, like Digital Dental Equipment and Virtual Haptic Simulators, to provide an entirely new mode of education in an objective way for students where the machine - not people - does the grading.

Scot Armstrong, the CEO of PDS, is looking forward to this partnership with the AADB, an organization that has been around for 138 years.

"We want to support existing educational institutions and provide a new model of learning, the Simodont. We promote multimodal learning for all of our customers, which helps them learn faster and in more depth. We want to utilize the multimodal learning foundation to migrate dental education to a model that uses dental fidelity and fair standards for machine testing and objective assessment, elevating dental education for students, faculty, administration, board candidates, and licensed professionals."
