Statement of the purpose

Addressed to: Egypt-Japan University of Science and Technology (E-JUST)

The reason behind my strong desire to join your esteemed university for the master's degree is due to the university's excellent scientific reputation and its important classification, which makes the efforts expended there fruitful, which will hone my skills and add to my knowledge. This will benefit the professional aspects of my work in the future.

I studied at Alexandria University and obtained a bachelor's degree with a very good grade in the field of civil and environmental engineering in the spring of 2023, which was a scholarship from the Center of Excellence for Water - Egypt. I was among The first batch of graduates, numbering 18 students. I also strongly desire to complete my scientific studies and achieve my desires that I have always dreamed of. My undergraduate curriculum has enabled me to clear my fundamentals, and now I feel the need to pursue refinement of the attained knowledge through a Master's course at the prestigious Egypt-Japan University of Science and Technology (E-JUST) University.

I received a lot of training during my studies, including training in the water company and the sewage company in Alexandria. I also visited the Habiba farm in Nuweiba to learn about the environmental sustainability methods on which the farm is based, as well as the effects of climate change on the city and aquatic life, in addition to visiting the city's water desalination plant. Later, a visit was completed to the city of Siwa to examine the problem of agricultural drainage and the effect of increasing groundwater salinity on agricultural crops. We were informed about future projects to overcome these problems. After my graduation, I was fortunate to receive training from the office of Dr. Fathi Abd Rabbo and Partners for Engineering Consultations to supervise the construction of a grain warehouse in Dekheila Port in Alexandria and continues until now, In addition to attending a number of conferences concerned with water problems, including the Cairo Water Conference.

At this point in my academic career, I realize that my undergraduate education has provided me with what is only a glimpse of this field and there is so much more waiting to be explored and created in this industry. Thus, armed with the much-valued consent of my professors, guidance of my seniors and careful perusal of the web pages of your University, I am convinced that my

academic career will receive the much-required exposure and enhancement enabling me to pursue extensive research and excel at it.

Not only does the University's distinguished faculty, excellent laboratory facilities and high reputation attract me but also does the on-going research by eminent faculty. My choice of this specialization is motivated by its multidisciplinary nature, which will broaden my horizons and give me flexibility in professional practice. In my experience as a student, I know for certain that good facilities can make a difference in a student's life and learning experience. So I am applying to your University because of the excellent reputation of your school. In addition, your splendid facilities are also a major attraction to me.

I have also attached to the letter my CV, which contains more detailed data, and I ask you to approve my request to join your honorable university, and to approve the study program I have chosen.

With full respect and appreciation
