For the past two weeks, the dedicated staff at UF Health Central Florida — including UF Health Leesburg Hospital and UF Health The Villages® Hospital — have worked expeditiously to provide high-quality patient care after the organization experienced a cybersecurity event on May 31.

Our information technology team is continuing to work around the clock with outside consultants and in concert with IT experts on our Gainesville and Jacksonville campuses to ensure that all computer systems are safely restored prior to bringing them back online. In the meantime, a number of backup and downtime procedures have been implemented, enabling our staff to provide safe, comprehensive inpatient and outpatient care to hundreds of patients since June 1.

Cybersecurity events like these take time to fully resolve. Significant progress is being made on that front. We remain committed to delivering on our promise to the community to meet their health care needs and will resume normal operations as quickly as possible.
