

Darvas Box 3.0

How Do We Use It?

Take automated price action to the next level with the updated Darvas 3.0 indicator. By using color-coded arrows, the new Darvas 3.0 signals traders when price has reached key levels. Now, traders can be alerted when price has attained selected minor low and minor high patterns that Darvas is built upon. These automated arrows will signal turning points and confirmation of high probability levels.

Use these “signal arrows” to identify both entries and exits once they’ve been triggered. The updated Darvas 3.0 support and resistance signals highlight opportunities as the pattern forms. Even better, this updated indicator also signals where there’s a probability of a stall or reversal. Let the arrows point the way to spotting stronger support and resistance levels.
