Eligibility & Discovery set-up

Tags

*Climate Solutions *Crypto advocacy *Community *DAO *Diversity, Equity, Inclusion, and *NFTs

Eligibility Tag Reasoning:

*Climate Solutions: regenerative practices, regenerative farming, gardening, organic trade, education, regen construction

*Crypto Advocacy: NFT and cryptoDAO formation, IRL crypto education

*Community: this garden is an open source model for the wider community and ReFi, also for the local community (glocal)

*DAO: the exit to community model (legally set up) will be coupled with a DAO in the real world which is in progress

*Diversity, Equity and Inclusion (DEI) LaLa Gardens Cooperative, LCA's Wisdom Council is majority BIPOC, Economic systems built for distribution among various stakeholders, existing diversity among team and partners.

*NFTs, because Microbe Heroes have arrived to help restore balance to our planet.

Project Stage

No, this project has not raised external funding

Region

North America

Step 2 of 4

Grant Details

LaLa Gardens: Saved by Microbe Heroes!

Which one are you?

A garden, narrative rich, generations deep, describing a hero's pathway.

A garden where soil is grown and relations are intact.

With soil, comes microbial diversity, with relationships, come mythic stories of those who've traveled from before.

LaLa Gardens, in succession from homestead to homestead of those in love with this planetary journey, where Microbe Heroes have arrived to save the garden.

The story goes...

A band of Microbe Heros have arrived in the garden looking for LeeLa, a mythic, accidental hero herself. LaLa Gardens, their first stop. Leela arrived in the past (our now), from a future where balance and succession have been restored; the diverse and joyful expression of Nature.

She has carried with her a small bag of soil, the inoculant to seed other gardens with the diversity of microbes needed to restore and revive in any condition, place or time. These are the OG microbes, indigenous to a pristine garden, protected from extractive practices; LeeLa's garden of the future, tended with love and patience. They are here now to do great and small works, restoring ecosystems in their heroic journey.

Which Microbe Hero are you?!

Rooted in the soil, heads in the clouds...

About

LaLa Gardens is a one-acre garden demonstration of permaculture and natural farming in the exurbs of Fort Collins, Colorado.

The garden features regenerative farming, gardening courses, and is a pilot project for community ownership, governance, economy and culture. With a model based on a [Declaration of Interdependence](#) which utilizes a global regenerative currency and ecosystem, as well as the regenerative values and purposes catalyzed by [Regen Living Institute](#).

Narrative rich, generations deep. The current iteration of this project as a garden and a heroes roadmap for anyone to follow is woven from a narrative generations deep.

It is reflective of hyperlocal systems of Partnerism, membership, gifting, trade and other forms of mutual support. It is developing models for applying NFTs to regenerative real estate, education, marketplaces, art, culture and re-sci as a model for any neighborhood.

What is LaLa Gardens' vision?

We believe regeneration can be expressed through sustainable economic principles of stewardship in a decentralized management structure.

We have created pathways for expressing healthy, vibrant, living ecosystems, both in the garden and with communities of reciprocity.

Rooted in Soil, Head in the Cloud.

What's LaLa Gardens doing?

La LA is a one-acre showcase garden and catalyst hub in CO (USA) with a global community.

We demonstrate agility and repeatability through regenerative IRL prototypes, low tech methodologies, custom modules, land templates and regenerative tools in Web3 including NFT generative art and cutting-edge community formation. We have been working on this revamped exit to community model for more than a year now and part of the launch will be opening June 15th, 2022 for initial listing, a big celebration day for the garden calendar and their members in future regen celebrations!

Do you like how that sounds and want to find what this cute guy  is all about?

You and hundreds of others will be populating the garden, regenerating soil, air, community and animals as MicrobeHeroes. Yes! This is an open invitation to the garden and to your very own hero journey. As a starting point, we'll be saving our beautiful garden from dangerous predators and this is where you first come in!

What's next?

What is the specific mission this garden will frame for you?:

- ① We are providing the roadmap but you get to choose your adventure, after all free-will is a natural law operating in this garden and its entire manifestations.
- ② From a pioneer (crossing the pond again?) to a visionary, or artist, or garden worker or investor... you get to choose which role best suits you.
- ③ Best to follow nature's guidance that perfectly knows how to do all things. It's we the Gardeners who interpret her systems through practicing reciprocity and following natural systems. There will be gardeners of real soil and virtual garden-systems linked to the soil. This generative NFT project is for the gardeners, human, animal or microbial, virtual or IRL.
- ④ Templates and modules created for land-based projects will require an entire menu of tools: offered from practicing gardeners and farmers to lawyers, auditors, artists and myth makers. It requires coordination of philosophizing and materialization. In a word, metamorphosis.

It needs you!

You as a contributor to this project and garden will not be alone... Regen Garden is here to also host you: a platform designed and dedicated to showcasing and launching regenerative projects on the blockchain.

La La Gardens plans to launch its NFT collection on Regen Garden. You're welcome to join this adventure! We expect Regen Garden to be a launchpad for regen projects across the world and Lala is actively involved in this platform's development.

All the models and templates created in this special garden will act as blueprint for the wider for-good regen ecosystem. We'll make sure they are open sourced to the community.

This Garden waits for your heroic act of becoming a microbe to heal the soil! Will you be up to the task?

Thanks for your help!
