

TRIAL RESULTS – 5th October 2021

Multiple Positive Clinical Updates of Lemzoparlimab reported

“Accumulative data from the ongoing lemzoparlimab clinical trials further increase our understanding of its safety, PK and efficacy profile,” said Dr. Joan Shen, CEO of I-Mab. “We are encouraged by the clinical data of lemzoparlimab obtained so far and are rapidly advancing the clinical development of lemzoparlimab towards multiple registrational trials, with the goal of becoming the first CD47 antibody drug in China.”

KEYTRUDA® (pembrolizumab) Met Primary Endpoint of OS in Patients with Advanced HCC Previously Treated with Sorafenib

“Frequently diagnosed at an advanced stage, hepatocellular carcinoma has one of the highest mortality rates of solid cancers. Despite recent progress, there remains an unmet need for anti-PD-1 monotherapy after sorafenib, where KEYTRUDA is an established treatment option for patients,” said Dr. Scot Ebbinghaus, vice president, clinical research, Merck Research Laboratories. “It is very encouraging that KEYTRUDA significantly improved overall survival in this study, and we look forward to engaging with regulatory authorities as quickly as possible.”

CSCO 2021: Interim Data Announced from Ph 2 Trial (TRUST Study) of Taletrectinib in ROS1-Positive NSCLC

Dr. Caicun Zhou, Director of the Department of Oncology in Shanghai Pulmonary Hospital, stated: “We are pleased with the interim Phase 2 data, which have shown taletrectinib to be safe and tolerable, a very promising novel therapy for patients with ROS1 fusion positive lung cancer. Responses appear particularly impressive in crizotinib treatment-naïve patients, and while the number of crizotinib pre-treated patients is limited, so far, most patients continue to show benefit from the drug.”
