

DMM Install Guide

*For Korea, China, Taiwan.. A good paid Vpn may be needed

Hey, it's me Nyatsu. I decided to make a DMM install guide since all the others are pretty outdated now. I hope it will at least help some of you!

Try to view the sheet in desktop/print mode. Otherwise the margins will get messed up!

Quick overview:

1. Installing DMM:
 - 1.1 [VPN](#)
 - 1.2 [DMM Register/Download](#)
 - 1.3 [DMM launcher](#)
2. In-game:
 - 2.1 [Starting the game](#)
 - 2.2 [Log-in](#)
 - 2.3 [Rerolling](#)
3. DMM Translation Fan Patch
 - 3.1 [Installing fan translation mod](#)
 - 3.2 [Setting up auto translate](#)
4. [Common errors](#)

Your Priconne account can only be linked to 1 Dmm account!

ONLY that Dmm account can access the game data.

No way to unlink it!

If your Priconne account was linked before. You can't access it with a new account. You will need that Dmm it was linked to.

1.1 VPN

This point is pretty straight forward. You will need a VPN paid or free, which has access to a Japanese VPN server.

Notable Free Vpns (March 2024):

-TunnelBear (no more free jp servers)

-SoftEther VPN Project

-openVpn

Free JP VPN guide by Tilda:

- <https://gist.github.com/tilda/d52a8c7fa3f161de6cc45bbd2a1cbeec>

The Reason for this is, DMM is Region-blocking foreign players.

Everytime you start-up DMM, you will have to use a Japanese VPN!

Priconne itself can be played without a VPN!

(turn off VPN, once you are in-game)

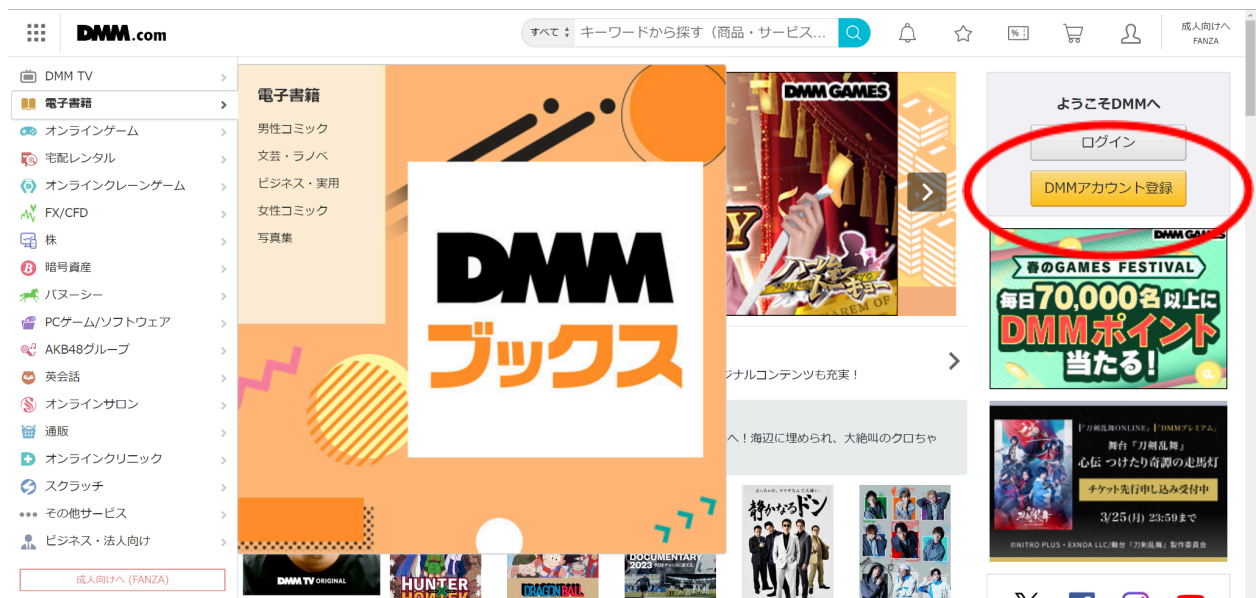

1.2 DMM Register/Download

1. Turn on a Japanese Vpn!

*common error: “You are not a eligible User”(region Block)
=>Try switching your vpn or turn it off and on a few times.

2. Visit <https://www.dmm.com/> and click the yellow button

- Enter your email and a password.
(write them up somewhere so you won't lose it)
- Press the yellow button to continue

*common error: yellow button does nothing!

=>Disable adBlock(or use incognito mode).

Still doesn't work?

=> Use a different browser that isn't chromium based (Firefox..)

The screenshot shows the DMM.com registration page. At the top, there's a navigation bar with the DMM.com logo, language options (English, 日本語), and various icons for notifications, favorites, cart, and user profile. The main content area is titled "Register" with the subtitle "Register a DMM account". It features two main sections: "Register by email address" and "Use another account to register". The "Register by email address" section has a progress bar with three steps: 1. Register (active), 2. Authentication, and 3. Complete. Below the progress bar, there are two required fields: "e-mail address" and "Password", both with red "Required" labels. A yellow button labeled "Send authentication code" is positioned below the password field. A note at the bottom of this section says "Please read and confirm the DMM Terms of Use before registering." The "Use another account to register" section offers three options: "Login using Google", "Login using Twitter", and "Login using Facebook", each with a corresponding icon and a right-pointing arrow. A disclaimer at the bottom of this section states: "Your viewing and purchase history will not be displayed on your timeline." A "Privacy - Terms" link is visible in the bottom right corner.

3. Confirm your Email!

- enter the code received in your mail!

The screenshot shows the DMM.com authentication page. The navigation bar is identical to the previous page. The main content area is titled "Sent authentication code". Below the title, there's a progress bar with three steps: 1. Register, 2. Authentication (active), and 3. Complete. A red message states "Registration is incomplete." Below this, it says "Authentication code sent to [redacted email address]". A note follows: "Please input the Authentication code in the e-mail and complete registration." and a disclaimer: "*URL is valid for one hour". There is a text input field labeled "Authentication code". Below the input field is a yellow button labeled "Register for membership". At the bottom, there's a link that says "If you fail to receive an email".

4. Register your profile!: <https://personal.games.dmm.com/profile/regist/>

- Enter your new DMM Player name
- Sex(yes)
- Age(make it 18+)

-Tap the yellow register button

*common error: yellow button does nothing!

=>Disable adBlock(or use incognito mode).

Still doesn't work?

=> Use a different browser that isn't chromium based (Firefox..)

DMM GAMES account registration

Thank you for verifying your email address!
Next, enter the following three items to start the game!

*All 3 items below are required

nickname	Nyatsu random generation
*You can change it later. *Up to 12 characters/Emoji not allowed	
sex	☒ male ☐ woman
date of birth	1995 ▼ Four ▼ 18 ▼
*Please refrain from using this service if you are under 18 years of age.	

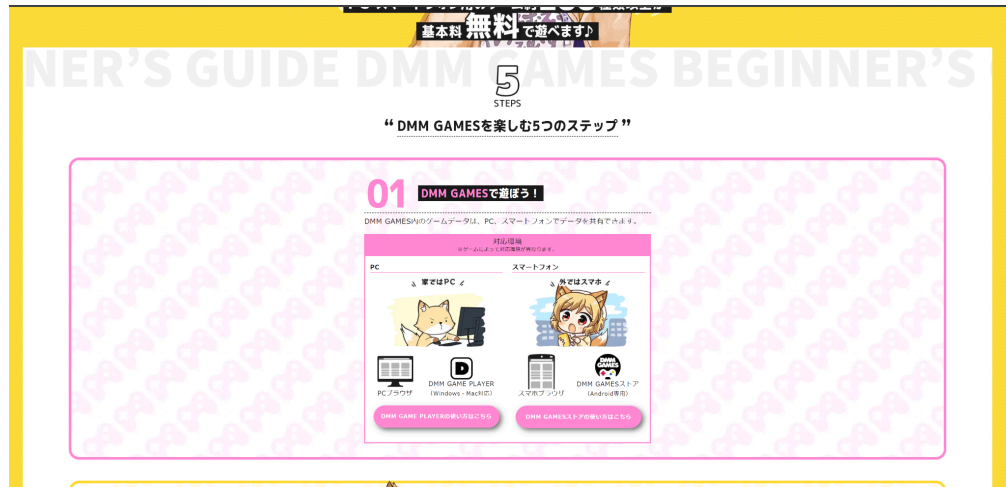

Register and start the game

[Agree to the GAMES Terms of Use](#) and click the "Register and start playing" button.

The personal information you register will be used for website update announcements, usage surveys, identity inquiries,

5. After a successful registration, open up:

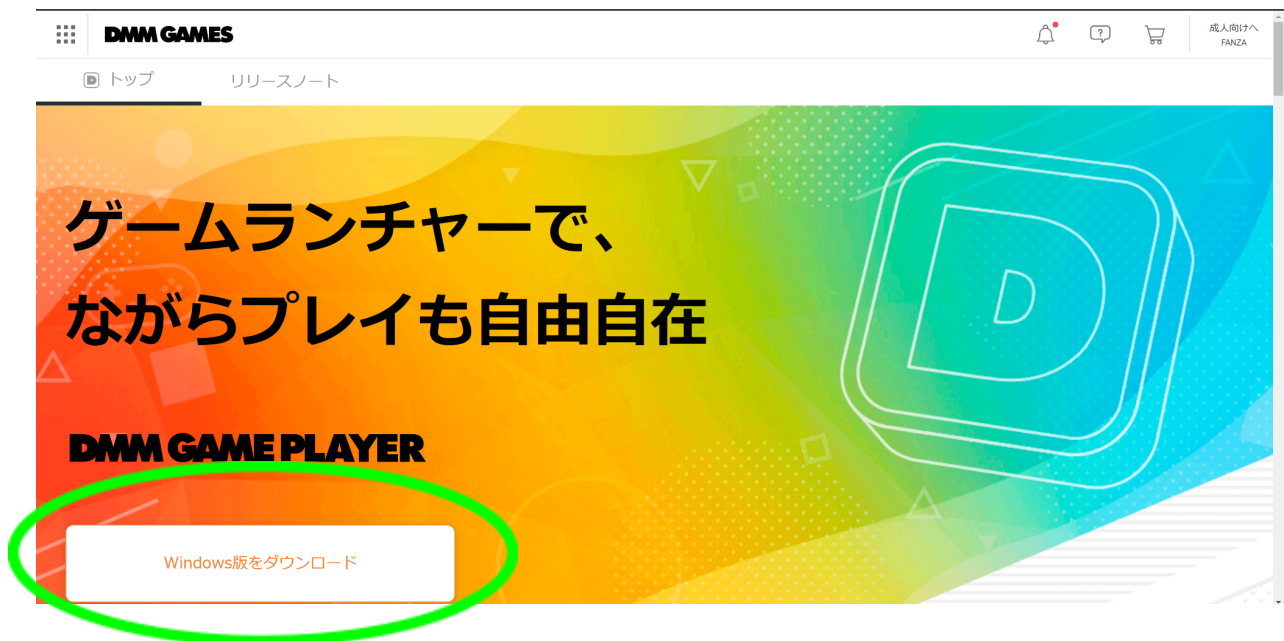

https://www.dmm.com/netgame/top/guide/startguide_html/=/ch_navi=/

-click on the pc option which leads you to this

=> <https://player.games.dmm.com/>

-click the windows option, download the DMM launcher and install

1.3 DMM launcher

Now you should be able to open up DMM like any other app.

Remember: You still need a JP VPN while dealing with DMM!

1.Open up DMM

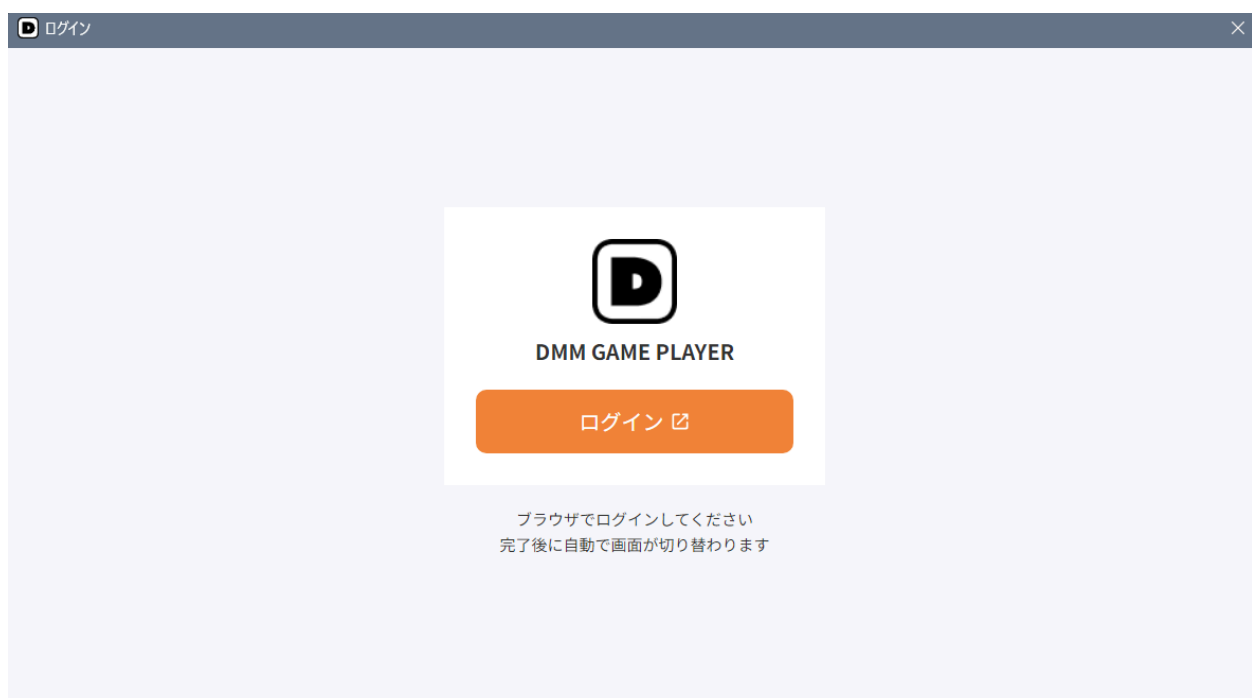

-once you open DMM it should prompt you to log in.
If it doesn't, click on the profile icon top right.

The new DMM version forces you to log in with your web browser.
There are a lot of things that can go wrong here. Make sure you
allowed cookies, allowed redirects, disabled adblock..

*if it doesn't work, wait +-20 seconds. The connection can be slow.
Still nothing => restart PC

If the redirect doesn't work try changing your VPN DNS settings
[VPN DNS Fix](#)

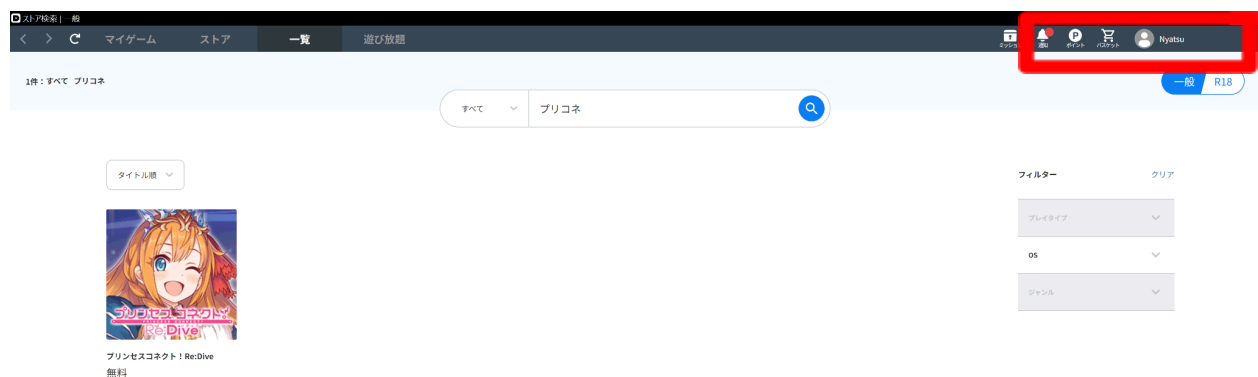

2. Search Priconne

-Once you are logged in, go to the **main page** and enter “プリコネ” in the **search**.

-click on Peco (Make sure your Profile is registered! **Your Name here**)

-there should be an **orange download** button now.

*common error: there is no download button!

=>Restart your computer(sounds stupid but helps sometimes)

=>Did you register your email?

=>Did you log in?

=>Is your system compatible?

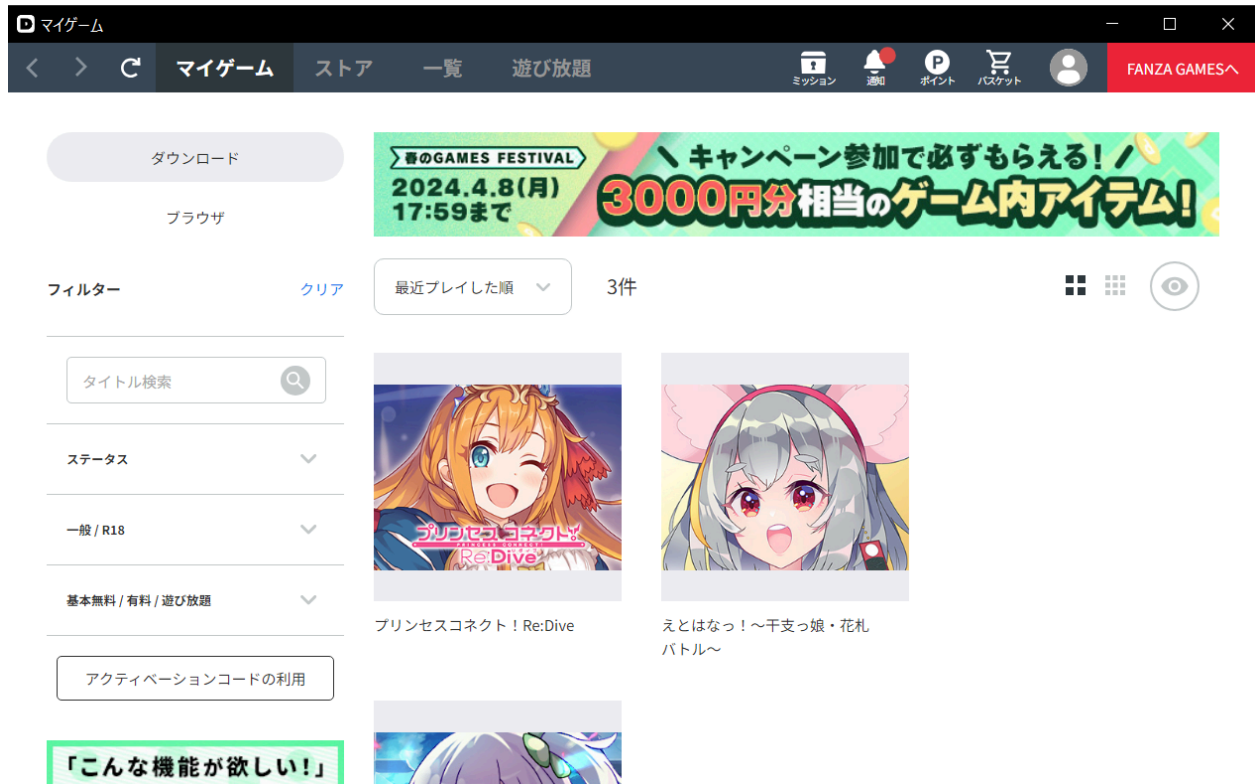

In doubt => translate the error message and or ask for help in
Priconne discord!

If there is an option. Congratulations! Download it and move to the next steps.

2.1 Starting the game

You can find the game under the first tab or as a shortcut on your desktop

Open the game and **deactivate vpn** once you are in-game!

If you are a new player, just press start and it will create a new account for you.

If you want to use a old account DON'T PRESS START

Look At the [Log-in section](#)

ID Should say 0!

*common issues: I can't start the game "Time out!"

=>Did you turn off your vpn?

Still time out?

=>are you in Korea, China, Taiwan, Thailand?

You will need a good Paid VPN to get around those Restrictions.

Not from those regions?

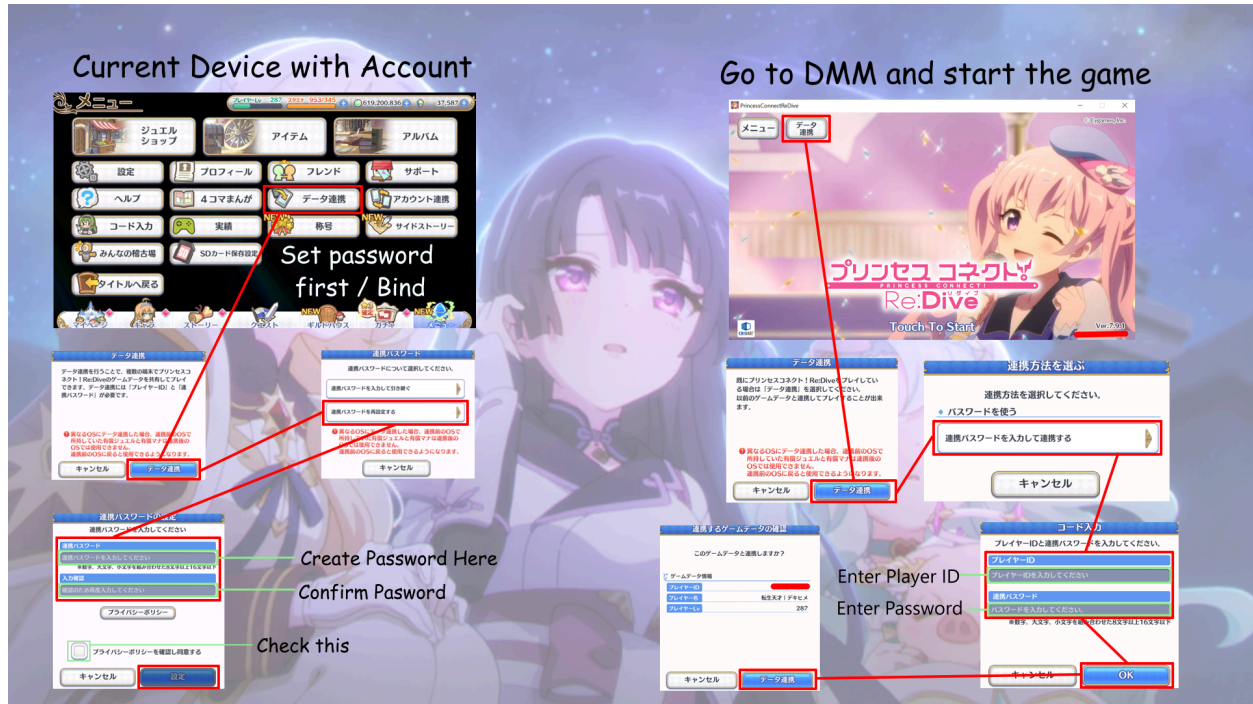

=>Your isp might be blocking Priconne services.

Try 1.1.1.1 <https://one.one.one.one/>

The game download is very very slow!

=> yes :(

2.2 Log-In

*common issues: I can't log-in. Error: "Only one Account can be linked!"

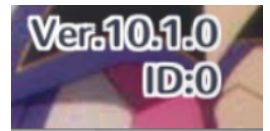

=>the ID in the right bottom corner should say 0,

If there is a different id from yours, then you accidentally

Created a new account!(delete that account/reroll)

DMM can only link one account to one Email!

If it's your ID, then you are already logged in!

And please Set up a Password + ID on your account to keep it safe! I've seen too many people lose their account to FB/Google.. Linking. Password saved accounts cant be deleted. Google accounts can!

2.3 Reroll

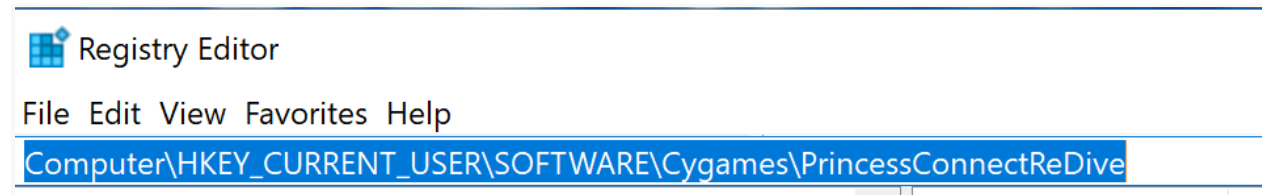

Rolling on DMM is not recommended. I will show it anyway.

First, Fully Close DMM!

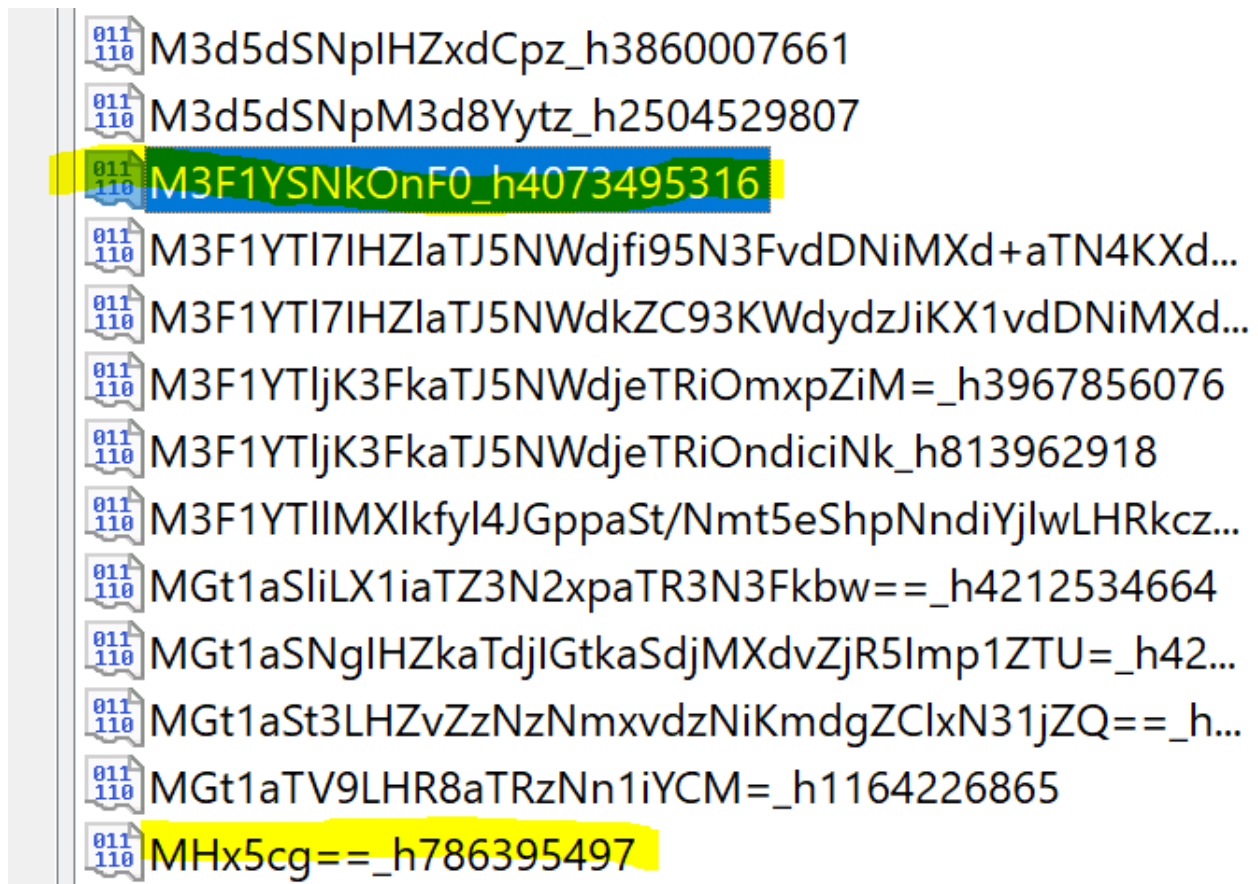

<https://princess-connect.fandom.com/wiki/Guide/Reroll>

Open registry editor(windows search it)

Enter HKEY_CURRENT_USER\Software\Cygames\PrincessConnectReDive
Delete those

Delete those 2 Items **and only those exact ones!**

I recommend restarting your pc now, i had a bug trying the next steps!

2. Make a new DMM account.

*You can use salted emails (for example, gmail lets you do this by adding things after a +. Emails to example@gmail.com and example+1@gmail.com will all direct to example@gmail.com) **but must still confirm each additional account.**

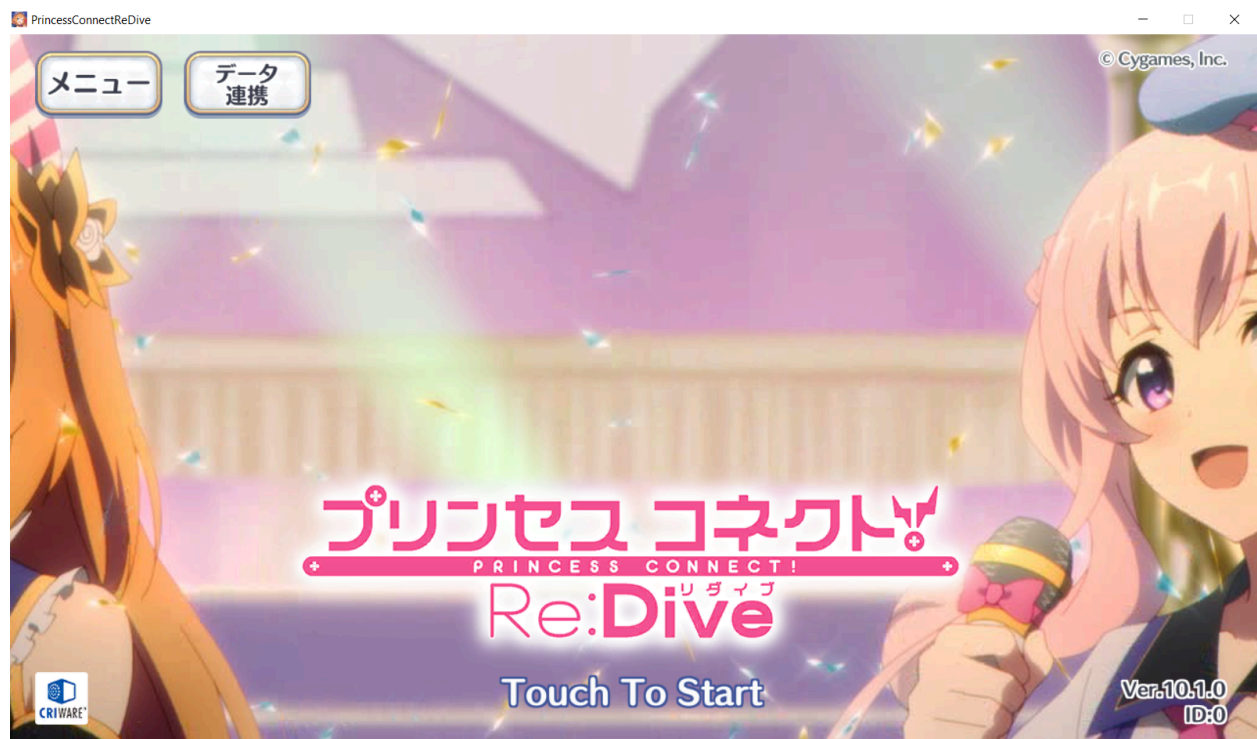

Open DMM=>log-in with the **new account**=>Search プリコネ=> orange button to open game. Same as before.

*Don't open from the desktop app, also had bugs doing it that way

If you have done everything right, it should look like this

ID say "0" = New account

You can either start a new one or Log-in now!

I Had to reroll 3 times before it worked. DMM can be very buggy with those things. Rerolling on mobile is way easier. If you have the option, do it there and then transfer the account to DMM.

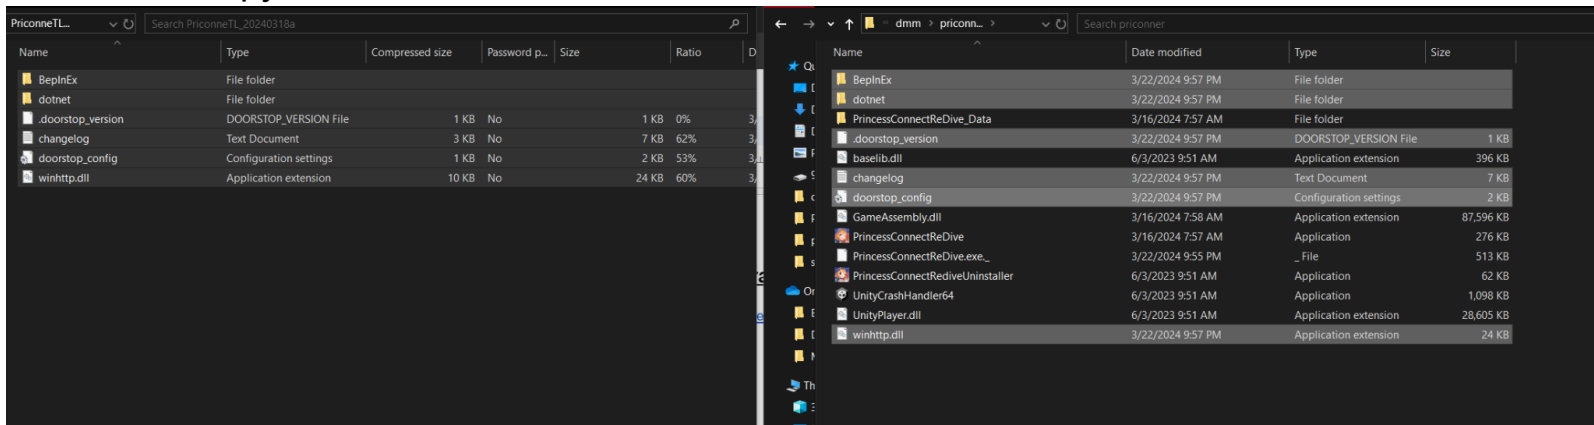

3.1 Installing fan translation mod

<https://github.com/tynave/PriconneReTL-Installer> <<<**Use this installer**

(only use the following if the installer above doesn't work)

<https://github.com/ImaterialC/PriconneRe-TL>

- Download the files from Github
- Open the Zip and your Priconner installation folder
- Copy the Github files into the Priconner folder

-start the game “The first run will cause a freeze for minutes, the second run and so on will be like usual.”

Congrats you are now able to read!

3.2 Setting up auto translation

<https://github.com/ImaterialC/PriconneRe-TL?tab=readme-ov-file#-settings-options-and-features>

*be careful with downloads. I can't guarantee what's safe and what's not :)

-There are a lot of translators out there, you need to choose for yourself which fits best.

This might help: https://www.youtube.com/watch?v=Uw_wOEw4nqs

I chose Google translate, cause it's the easiest to set up with no download.

-Go to ((E:\dmm))\priconner\BepInEx\config

-open "AutoTranslatorConfig"

-Enter "GoogleTranslateV2" next to "Endpoint"

-**Save the file (file => save)** and start the game

 AutoTranslatorConfig - Notepad

File Edit Format View Help

[Service]

Endpoint=GoogleTranslateV2

FallbackEndpoint=

-In-game press Alt + 0 to open up the translator menu

-if translator status says "running" everything should be fine

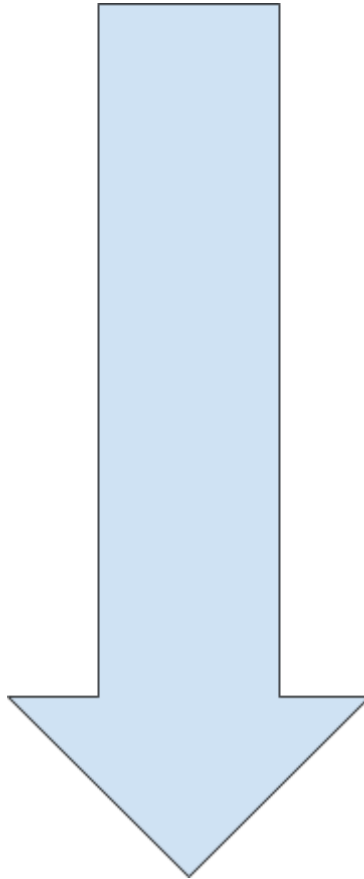

That's about it. Hope i could help some of yall with this. If there are still questions, feel free to ask on the Priconne discord.

Will probably add a few things as time passes (=^·ω·^=)

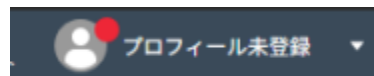

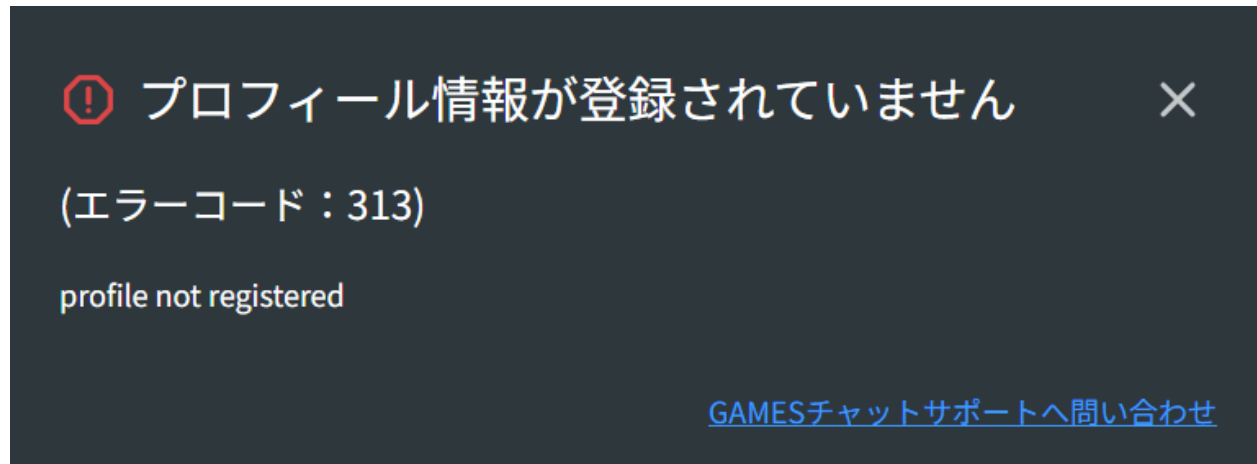

Special thanks to all the translators, coders.. working on this patch for free!

Error messages are listed below

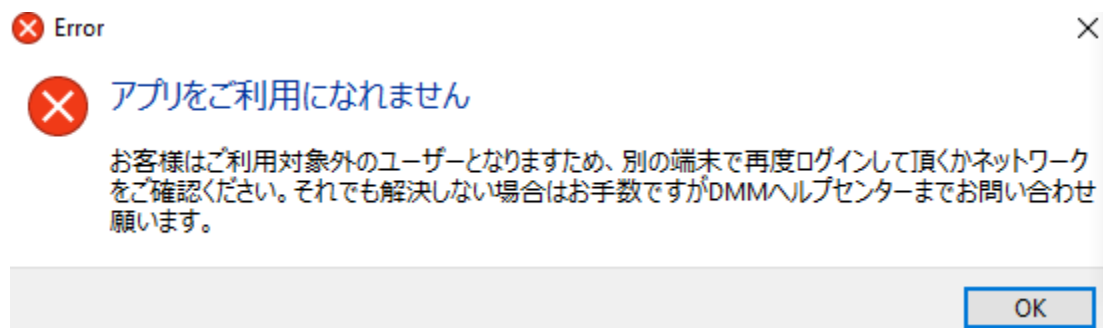

4. Some errors you might encounter:

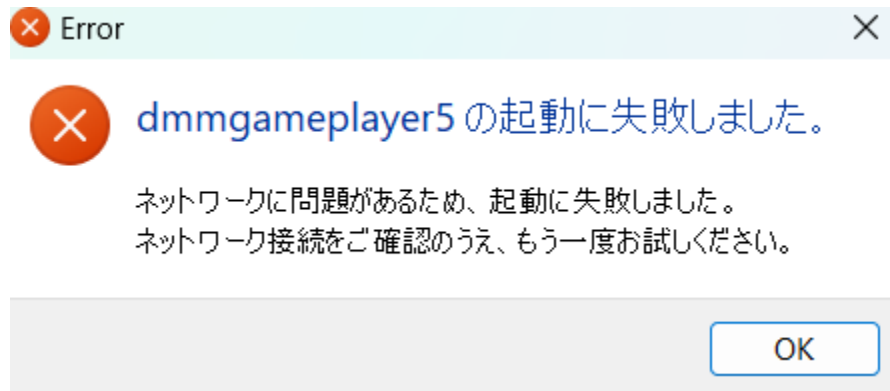

Confirm/register your account!

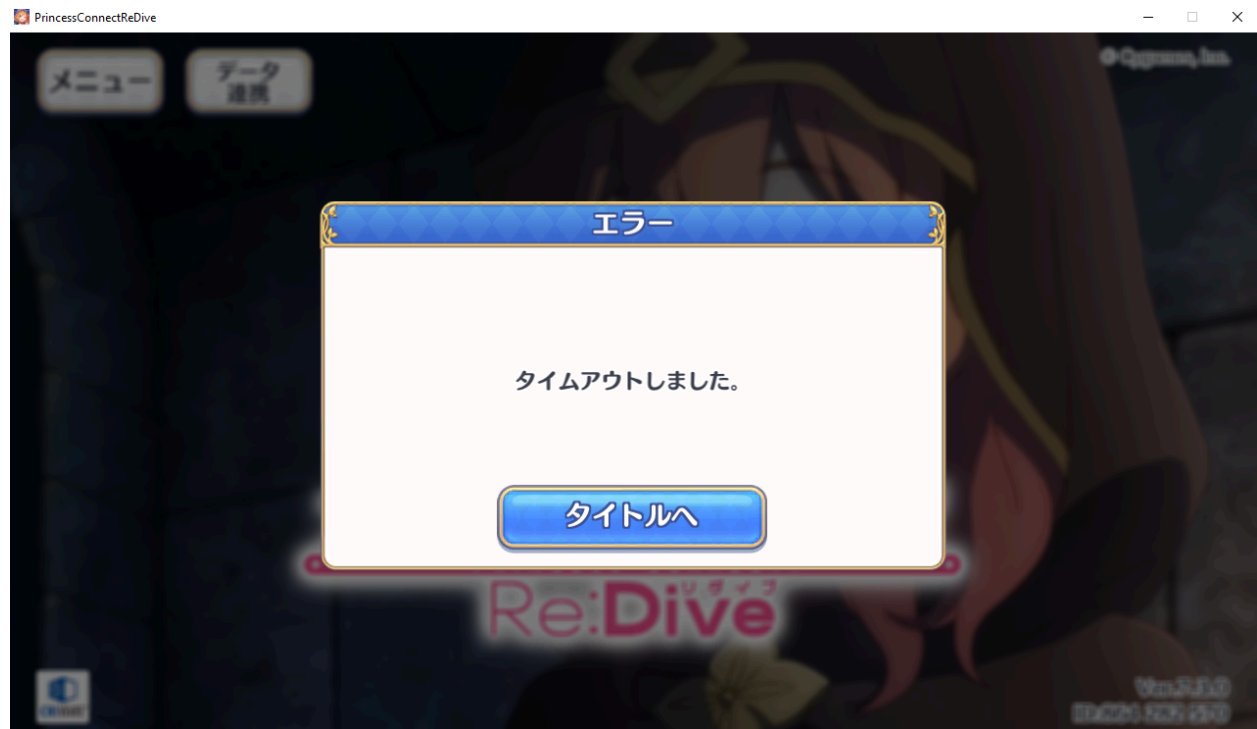

Turn on JP VPN before starting DMM!

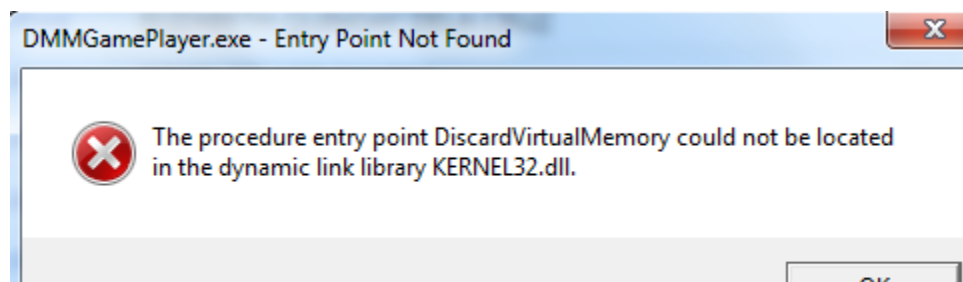

Network error. Try a different VPN or check your connection

Turn off VPN in game! (Try 1.1.1.1 if no success)

DMM only supports Windows 10 and up!(might work on W8.1)

Game doesn't open and runs in the background

 PrincessConnectReDive	6,2%
 PrincessConnectReDive	6,2%

High possibility of your current vpn causing issues!

Try a different vpn. **Make sure your old vpn is fully closed!**

-restart your pc for good measure

You can only link 1 account to 1 DMM email

False Virus flag

"Themida is a commercial packer that both legitimate and malicious actors use to make analysis of their binaries difficult. Legit business use it so its harder to reverse engineer and steal any of the secret sauce while bad actors use it to hide the malicious actions from initial scans."

Trojan:Win32/Wacatac.B!ml

Alert level: Severe

Affected items:

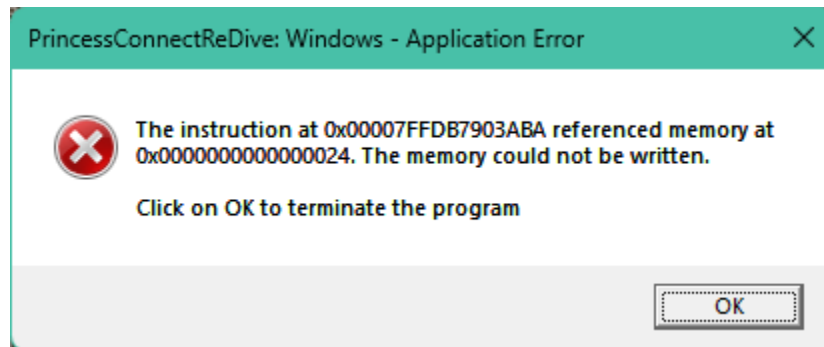

file: C:\Users\priconner\PrincessConnectReDive_Data\Plugins
\x86_64\coneshell.dll

Try to wait. DMM launch is slow at times. Try to restart VPN/check your connection if its still not working

is DMM not working? its stuck like this for me

This one can be anything. Most likely something wrong with your install/PC. Try to reboot your pc. (and check compatibility)

VPN DNS fix

Houndread CHEF 11:58 AM

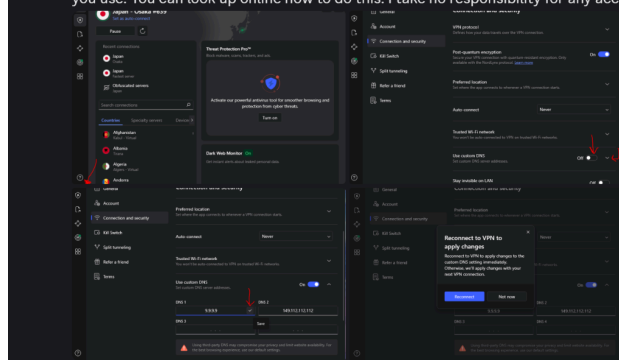

NordVPN DNS issue with DMMPlayer Fix

TL;DR is you need to change your DNS settings on the NordVPN app, see below for instructions.

I recently was having issues with not being able to successfully log in to DMMPlayer as I would be prompted to sign-in via browser first. Upon selecting the sign-in option in the browser window that automatically opens, nothing would happen. It seems many people had this issue specifically with NordVPN, including many UmaMusume players. Thankfully [angryjack](#) shared that another discord user discovered the issue lies in the DNS not being able to resolve the webpage sign-in, and mentioned that the DNS must be changed. I had to look into what this even meant and how to do it, and I successfully managed to get into DMMPlayer and run Priconne again using a custom DNS on the NordVPN app. To do this:

1. Open the settings window on the NordVPN app
2. From the Connection and security tab, look for the "Use custom DNS" option and turn it on. Click on the dropdown arrow to enter in the custom DNS you will be using.
Note: I am no expert when it comes to using custom DNS, and from my understanding there are risks to using specific DNS servers, but I will share which ones worked for me.
3. Enter the DNS server you will be using. I used 9.9.9.9 and 149.112.112.112, which are Quad9 servers based in Switzerland. Other options include Google 8.8.8.8 and 8.8.4.4, and AdGuard 94.140.14.14 and 94.140.14.15, though I have not tried connecting with these myself. Cloudflare 1.1.1.1 and 1.0.0.1 did not work for me. After entering the DNS server numbers, click on the checkmark next to the entry box to save the custom DNS. You will be prompted to reconnect to the VPN server if you are actively connected to one, so just select "Reconnect" and you should now be able to successfully sign in to DMMPlayer.

There are ways to change the DNS server through your OS as well, if you are also having this issue but don't use NordVPN and cannot change the DNS via the vpn service you use. You can look up online how to do this. I take no responsibility for any account or connection issues. Do this at your own risk.
