Abstract

The abstract should be written in English. It should reflect the article's overall content, help readers determine its relevance to their interests, and decide whether to read the entire document. The abstract should contain a statement of the background of the study (1 sentence), the research objectives (1-2 sentences), the research methods (3-4 sentences), the research results (4-5 sentences), the research conclusions (1 sentence), and the research implications (1 sentence). The abstract should consist of 150-200 words and be written in a single paragraph using Calisto MT-9 font, single-spaced. It is not permitted to write bullet points and numbering in the abstract.

Keywords: reflect the essence of the concept within the scope of the problem, can consist of 3-5 words/phrases, written in Calisto-MT-9 (Italic), separated by using a semicolon (;)

INTRODUCTION (Maximum 20% of the length of the manuscript)

Contains the background of the problem and the literature review. The theoretical basis is written concisely and integrated into the introduction. Subheadings on the literature review or theories used are not permitted. In addition to the literature review, references may include relevant research. The most critical points in the introduction are: research gap supported by appropriate, cutting-edge theories and research, and "state of the art" or "novelty" of the research conducted. To highlight the novelty, it is necessary to write a review of several relevant studies. In this section, the research objectives are written in a declarative sentence, and the theoretical and practical benefits of the research should be presented. The problem, research objectives, and references should be written narratively in paragraphs without specific subheadings.

The way of the sources cited in the text must clearly indicate the source's citation, including the author's name, year of publication, and the page number. All citations must adhere to writing etiquette, especially when writing direct or indirect quotations. Citations are attempted using standard citation applications (Mendeley, Zotero, EndNote).

The introduction is written in Calisto MT-10 upright font, with 1.5 spacing and no additional spacing between paragraphs. Each paragraph, except the first paragraph under a

subchapter, is indented by eight (8) digits. The paper size is A4 with 3 cm margins on the right, left, top, and bottom. The introduction is presented in paragraphs, each approximately 1,000 words long.

METHODS

Contains the type of research, time and place of research, target/objective of the study, research subjects, data and data sources, research procedures, research instruments (if it is necessary, there is an attachment regarding the instrument grid or excerpts of the materials used), data collection techniques, data analysis techniques, data validation, and other matters related to the research method. Each of these is written narratively in paragraphs, without subheadings, with lowercase letters starting with a capital letter, and with Calisto MT-10 font.

The research methods section should cover a maximum of 10% of the article's content for qualitative research, or a maximum of 15% for quantitative research and R&D. This section should be written in 2-3 paragraphs.

RESULTS AND DISCUSSION (Minimum 60% of the length of the manuscript)

Results of the research can be presented in the form of images or data created as graphs, diagrams, tables, and/or descriptive text. This chapter should go beyond simply describing the contents of the

tables and figures. Analysis and interpretation of these results are necessary before discussion.

Figures and tables should be placed in the center. Table titles are written from the left above the table using Latin numerals, with all initial words capitalized except conjunctions. Figure/chart titles should be placed in the center below the figure, numbered using Latin numerals, and all initial words capitalized except conjunctions. Table lines are single-spaced. Table lines are created as in Table 1. Examples can be seen in Figure 1 and Table 1.

Table 1. Feasibility of the Benefit Aspect

Assessment Categories	Frequency	Presentation n
Quite decent	3	4,6
Worth it	27	41,5
Very worthy	35	53,8
Total	65	100,0

Figure 1. Comparison Chart

Tables do not contain vertical lines. Horizontal lines are only at the top and bottom of the table, as in Table 1. If the table size is insufficient, the font size of the table and images can be reduced to a minimum of 8.

Overall, this section should answer the research question posed. The body of the article should be longer than the introduction, comprising at least 60% of the total body of the article.

The discussion focuses on linking the data and analysis results to the research problem or objectives and the broader theoretical context. The discussion can also answer the question of why the facts found in the data were correct. The discussion can also be compared with relevant previous research findings. The discussion should also be enriched with studies referencing previous research results published in scientific journals.

The discussion can be written together with the data being discussed. Or all the results/data can be presented first and then discussed later.

The results and discussion subtitles can be presented separately. Subtitles are written using the Calisto MT-10 font, bold, with a capital letter at the beginning of each word, except conjunctions. Subtitles do not need to be numbered, but written in bold. If subsections are still required, they are written in Calisto MT-10 font, bold, italic, with a capital letter at the beginning of each word except conjunctions.

CONCLUSION (Written a maximum of $\pm 10\%$ of the length of the manuscript.)

A conclusion is not just a recap of data and findings but a meaningful summary. It can be

a statement of expectations, as outlined in the "Introduction" chapter, which ultimately leads to a "Results and Discussion" chapter, creating consistency. Furthermore, it can include perspectives on developing the research findings and future applications (based on the results and discussion). The conclusion should be presented in a single paragraph without numerical format.

ACKNOWLEDGEMENTS

Contributors not listed as authors should be named, and their specific contributions should be described.

ETHICS APPROVAL (if applicable)

Authors must include an ethical approve statement. Research involving human participants must have received approval from an appropriate ethics committee or institutional review board.

USE OF ARTIFICIAL INTELLIGENCE (AI)

Authors must select one of the following statements:

"The authors declare that no generative artificial intelligence (AI) tools were used in the preparation, analysis, or writing of this manuscript."

"The authors declare that the generative artificial intelligence (AI) tool [name of the tool] was used exclusively for language editing and/or grammatical improvement. The use of AI did not

influence the scientific content, study design, data analysis, data interpretation, results, or conclusions of the manuscript. Full responsibility for the content remains with the authors."

If the use of artificial intelligence in this manuscript does not fit either of the statements above, the authors must clearly and transparently describe, in their own words, which AI tools were used, for what specific purpose, and at which stage of the manuscript preparation.

CONFLICT OF INTEREST

All authors should disclose any personal and/or financial relationships with others or organizations that may improperly influence their paper. A conflict of interest statement should be provided in the manuscript file immediately before the References section. Case there are no Conflicts of Interest, so report "The authors declare no conflicts of interest".

AUTHOR CONTRIBUTIONS STATEMENT

The corresponding author will be responsible for all correspondence related to the paper and must ensure that the other authors are included in the communication regarding submission, revision, and publication processes. We encourage authors to include a statement in the paper that shares and accurately describes each author's contribution.

See the examples below:

Author A: Conceptualization, Methodology, Validation, Investigation, Resources, Data curation, Writing – original draft, Writing – review & editing, Visualization, Supervision, Project administration. **Author B:** Software, Validation, Formal analysis, Resources, Data curation, Writing – original draft, Visualization.

FUNDING INFORMATION (if applicable)

The names of the funding organizations should be written in full. If there was no financial aid, it should be reported that "This research did not receive any financial support".

REFERENCES (Refer to APA 7th edition)

It is recommended to use standard citation applications (Mendeley, Zotero, EndNote)

It is recommended to use primary sources (scientific journals/magazines or research reports) and the most recent (a maximum of the last 5 years).

The references only list sources referenced in the body of the article. Conversely, names cited in the body must appear in the references.

Writing the references follows the journal's style, as stated in this journal's writing guidelines (referring to APA Style 7th Edition) and sorted alphabetically.

Written using Calisto MT-9, in single space (or at least 12pt), there is a space of 1 between bibliographies.

10. References for the last 5 years maximum.

Notes:

Please pay attention to some additional notes and common errors.

1. The entire manuscript must be written in English.
2. Layout 3 cm on each side
3. Title maximum 14 words (do not include location)
4. The total number of words excluding abstract and references is around 5000-8000 words.
5. Please only include a summary of the aims, methods, and results in the abstract.
6. Avoid including statistical data results in the abstract.
7. Make sure the graphic description is above and the picture description is below, and editable (easy to edit).
8. Table follows APA 7 (without vertical lines)
9. Allowed pages 15-20
