SL: use this and be comfortable while using your computer.

In this generation almost everything we do, we do with computers, TV, and Smartphones.

Like, entertaining, learning, teaching, working, etc.

But sitting in front of the screen for a long time could be very harmful.

Because of the blue light that comes from the screen, this light can make you, headaches, insomnia, eye strain, etc.

This happens a lot, especially to the people who use TV, computer, and smartphones, a lot (more than 3 hours a day).

Especially for your kid, kids these days are always on their smartphones.

I can offer you a solution that allows you and your kids to work, watch, study, and play without the negative effects of blue and UV light on your eyes.

[Use your screen without the need to worry about your eyes and your kid's eyes.](#)
