WhoHasIt Privacy Policy

This policy covers the Android app WhoHasIt. WhoHasIt helps you track items you lend and borrow. It works offline and stores your records on your device.

Information stored on your device

The app stores names you enter for people, item details, quantities, values, notes, lending and borrowing dates, due dates, return status and dates, and reminder and appearance preferences. It uses these details to show your records, organize your history, and schedule reminders. The app does not require an account or read your device contacts.

Reminders and device settings

If you enable reminders, the app uses your device time zone to schedule local notifications. A notification can display the item name and when it is due. You can control notification access and lock screen visibility in Android settings.

Storage and sharing

Records are kept in the app’s private storage area on your device. The app does not send them to the developer, sync them to a server, or share them with third parties. The app does not include advertising or analytics services.

Retention and deletion

Records stay on your device until you delete them. Marking an item as returned keeps it in your history. You can delete individual records in the app and remove a person once their linked records have been deleted. Clearing the app’s storage or uninstalling it removes its local records and settings.
